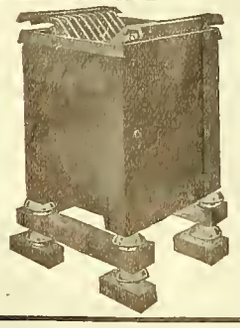
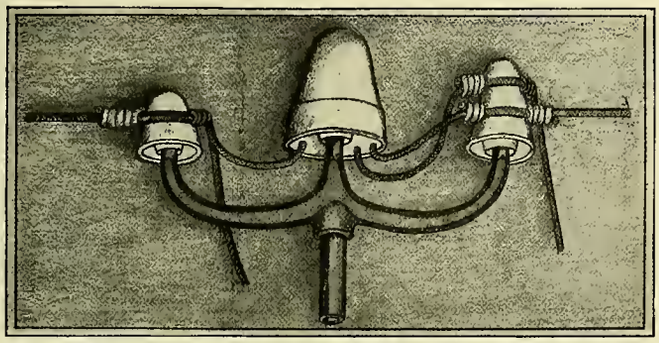
SAN FRANCISCO, Rialto Bldg. CLEVELAND, Citizen's Bldg. CANADA, Canadian General Electric Co., Ltd., Toronto



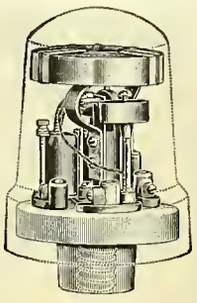
PROTECTIVE FEATURES



No. 1. Series Automatic Cut-Out with Porcelain Housing

OF THE

Hamacek Automatic Series Cut-Out



Will protect against lightning and disruptive discharge of current.
Will protect shunt coils.
Will cut-out ground lamps and broken lamp loops.
Will insure continuous lighting service and thereby save many times its cost in rebate bills.
Will locate a break immediately.
Let us send sample on approval—its work will be a pleasant surprise.

A. F. HAMACEK

For Classified Index of Advertisements See Page 6.

Motors, Switches, Arc Lamps, Circuit Breakers, Etc., Etc.

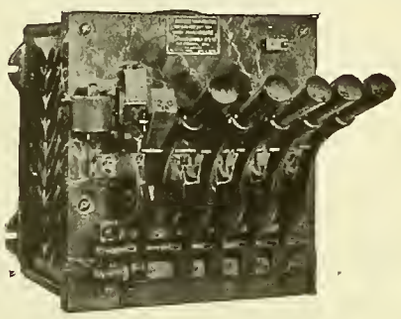
ALWAYS IN STOCK.

MANUFACTURED BY

G. E. Co.

CHICAGO EDISON COMPANY, 139 Adams Street, CHICAGO.

Multiple Switch Type Starter



This is the best type of starter to use on motors from 50 H. P. up because it is much more compact than the sliding type of starter, and in addition does not spark.

By an interlocking arrangement the switches cannot be thrown in except in their proper order, and in case of no voltage the same arrangement causes them to drop consecutively out of contact.

NEW "MORRISON" STORAGE BATTERY

THE CELL

This plate is so strong electrically and mechanically that no amount of electrical abuse or of vibration in traction service can dislodge even the slightest particle of its active material.

Lowest internal resistance of any storage battery in the world.

The weight efficiency is conservatively 14 watts per pound total weight, and electrical efficiency unsurpassed .˙. .˙. .˙.

THE DAYTON MFG. CO.
DAYTON, OHIO

General Electric Company

New Porcelain Ceiling Boards
FOR ARC LAMPS

Cat. No. 36850

Cat. No. 36850 is notable for its employment of a snap switch and a ratchet and chain, the lamp and board thus being self-contained and requiring no additional wiring to connect them with a switch. The use on this ceiling board of Edison Plug Cut-Outs, a better means of protection than the general cut-out, makes every lamp on a circuit independent of the others. The lamp hook, mounted by a spring, protects the lamp from jarring, making this board ideal for use on wharves, and in railway stations, factories and mills. The board is furnished for both concealed and cleat wiring.

Cat. No. 36844 may be equipped with N. E. C. S. enclosed fuses, 3 to 30 amperes, 250 volts. The board is compact, and is an excellent auxiliary device for installations using enclosed fuses, as only a few different styles of fuses need be kept in stock.

Cat. No. 36844

Principal Offices: SCHENECTADY, N. Y. Chicago Office: MONADNOCK BLDG.

A Great Combination

The Business Man's Magazine
and The Bookkeeper

is the oldest, largest and best of all business magazines. It not only tells you what is being done in business, but how it is done. All of the latest methods for conducting every department of any business are described, and every detail is fully illustrated.

Subscription Price, $1.00

Business Short Cuts

is a book of 160 pages (5x7 in.) of the concentrated business experience of a hundred successful business men. Read it and it will save you ten dollars' worth of time, for it contains scores of short methods and easy ways of doing the things you are spending most of your time upon every day. The men who originated these short cuts get $25.00 to $50.00 a day—their experience here cost you nothing—not a penny. More than 16,000 business men have bought Short Cuts at $1.00 a copy.

As a reader of

The Western Electrician

you already know its value to you. We have made arrangements with the publisher of this excellent journal which enable us to offer you a years' subscription (regular price $3.00) in connection with The Business Man's Magazine and The Book-Keeper.

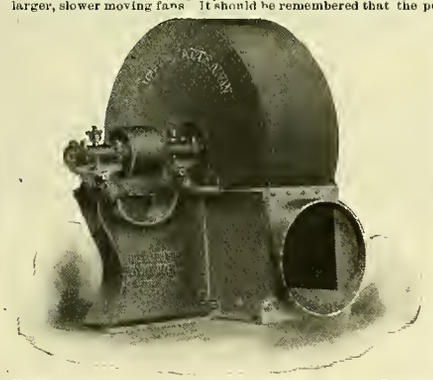
NEW designs have been worked out for all types of **GREEN-MATTEAWAN** Fans with the special object of reducing the power required for driving. Fans are often driven by small non-condensing engines or by electric motors using purchased electric power, so this is a quite important matter. Fan builders, however, under the stress of competition and to increase profits, have frequently offered small, inefficient, high-speed fans where true economy for the purchaser would have indicated larger, slower moving fans. It should be remembered that the power consumed by a fan runs up very rapidly with the speed.



The Green Fuel Economizer Co.

does not contract for the engineering of plants, or for the installation of heating and ventilating plants in competition with the heating and ventilating contractors, but freely offers the advantages of its engineering skill and 60 years' experience, and invites those interested in fan and blower problems to send for its book **"WE" on Fans, Blowers and Exhausters,** or to call at its offices in

SAMSON TURBINE

If the SPEED of the turbine is to be controlled by a GOVERNOR, the turbine should be of such capacity that it will develop the MAXIMUM POWER required, when operating at ¾ to ⅞ gate, then when an overload is thrown on the governor can open the gates wider and allow an increase in power. The EFFICIENCY of the SAMSON between ¾ and ⅞ gate is over 84%.

$4.60 vs. $9.40

Automatic — Manual

Our Automatic Telephone System has been adopted in the following cities:

Chicago, Ill.	Portland, Ore.
Grand Rapids, Mich.	Woodstock, N. B.
Columbus, Ohio.	St. Marys, Ohio.
Dayton, Ohio.	Westerly, Ohio.
Lincoln, Neb.	Manchester, Iowa.
Portland, Maine.	Princeton, N. J.
Auburn, N. Y.	Albuquerque, N. M.
Lewiston, Maine.	Van Wert, Ohio.
Auburn, Maine.	Battle Creek, Mich.
Fall River, Mass.	Clayton, Mo.
New Bedford, Mass.	Pentwater, Mich.
Los Angeles, Cal.	Toronto Junction, Can.
San Diego, Cal.	Wilmington, Del.
Hopkinsville, Ky.	Riverside, Cal.
Sioux City, Iowa.	Traverse City, Mich.
Cleburne, Texas.	Hastings, Neb.
Columbus, Ga.	Wausau, Wis.
South Bend, Ind.	El Paso, Texas.
Aberdeen, S. D.	Havana, Cuba.
Miamisburg, O.	Marianao, Cuba.
Medford, Wis.	Berlin, Germany.

Operation and maintenance expense per 'phone per annum of one of the Telephone Companies that replaced their Manual with our AUTOMATIC SYSTEM. (We will send name of company and detailed statement of above upon request.)

This saving of more than 50 per cent in operation and maintenance cost is pretty strong evidence of the economy of AUTOMATICS.

Hand in hand with the decrease in operating expenses goes the increase in quality of service. This latter means more business. All these Automatic advantages combined mean higher values for securities, bigger dividends for the stockholders.

Don't you see that you're wasting money on that out-of-date Manual equipment of yours? If you're a new Company, start with Automatic, and start right.

CENTRAL STATION HEATING

We are the originators and builders of the ONLY underground system of live and exhaust steam heating. Our system is used for the utilization and distribution of exhaust steam from electric-light and power plants, for heating residences, stores, public buildings, etc. 250 plants in successful financial and mechanical operation. We have the only practical Steam Meter. Also manufacturers of Wooden Water Pipe, Steam Pipe Casing, Steam Traps, Condensation Meters, Valves, Economizing Coils, Separators, and a full line of Steamfitters' Supplies.

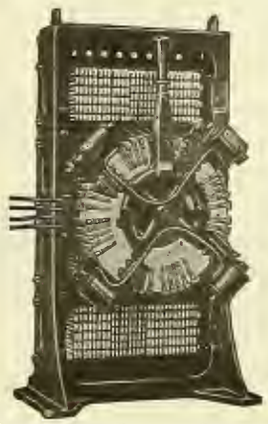
Westinghouse

Regulating and Reversing Controllers

For Both Alternating and Direct Current Motors

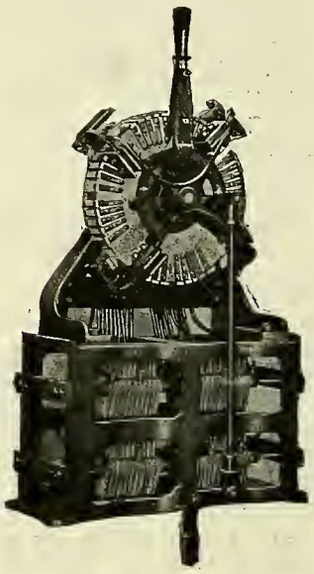


Regulating and Reversing Controller
Type No. 178-A. 50 to 75 h. p.

In design and construction represent years of combined experience and study of the actual conditions of motor operation, and the many requirements of the most varied and exacting service.

They are mechanically simple, strong and compact, amply able to withstand the severest service, involving frequent starts, stops and reversals.

Our Circular 1108
gives full particulars of many different types for different purposes; write for it.



Controller for Type SC Crane Motor
for 10 h. p. and above

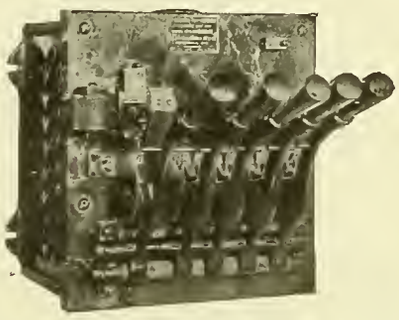
HABIRSHAW

Complete stock of all sizes constantly on hand and for sale at lowest market prices by

CHICAGO EDISON COMPANY,

WRITE FOR PRICES. 139 ADAMS STREET, CHICAGO.

Multiple Switch Type Starter



This is the best type of starter to use on motors from 50 H P. up because it is much more compact than the sliding type of starter, and in addition does not spark.

By an interlocking arrangement the switches cannot be thrown in except in their proper order, and in case of no voltage the same arrangement causes them to drop consecutively out of contact.

Electrical Testing

By

Norman H. Schneider

Chief Constructing Electrical Engineer
White City, Collinswood, O.

A book for every man who is interested in Electrical work.

You Should Have This Book

BECAUSE:

It is written for the practical man.
It gives the very latest information.
It treats of modern instruments universally adopted.
It contains a complete chapter on testing with the Voltmeter not explained in any other book.
The formulas given are fully explained and worked out in simple arithmetic.
The tests given are such as occur every day in the engine room, power house, telephone exchange, cable laying and constructors' work in the field.
It is written by a man who has had extensive practical experience in all branches of electrical testing.
It is a well made book and sold at a reasonable price.

210 pages, over one hundred illustrations and tables, handsome limp leather, postpaid. **Price, $2.00**

Just What the World Has Been Waiting For.

NEW "MORRISON" STORAGE BATTERY

THE CELL

This plate is so strong electrically and mechanically that no amount of electrical abuse or of vibration in traction service can dislodge even the slightest particle of its active material.

Lowest internal resistance of any storage battery in the world.

The weight efficiency is conservatively 14 watts per pound total weight, and electrical efficiency unsurpassed . . . .

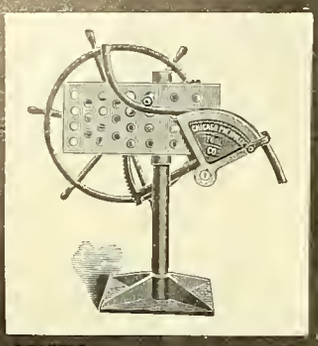
UNIVERSAL ELECTRIC STORAGE BATTERY CO.

INCORPORATED

OFFICE: 1355 RAILWAY EXCHANGE BUILDING FACTORY: 36-38 UNION PARK PLACE

CHICAGO, ILLINOIS

THE PLATE



THE CHICAGO PIPE BENDING MACHINE

Is invaluable for all kinds of pipe and ornamental iron work, as well as for the bending of electrical conduits. Bends piping of steel, iron, brass, copper or other material, cold, up to two inches diameter with one man.

One man can bend a piece of two-inch pipe to an S bend in three minutes, no other assistance or device being necessary or needed.

It is well adapted for the use of special dies that can be readily attached for bending light angles, flats, or tee bars to any desired radius as easily as bending pipe.

Full particulars furnished on application.

250 K. W. Motor Generator Set with Starting Motor.

Electrical Machinery

With a full understanding of modern practice, we have designed and built a complete line of direct and alternating current generators that, in their constructive and operative features, have demonstrated their superiority.

National Electric Company
MILWAUKEE

New York, Chicago, Philadelphia, Atlanta
New Orleans, Denver, Seattle, and San Francisco

It Can't Be Beat—The Guthrie Flasher

A SIGN FLASHER WITHOUT A MOTOR

Agents Wanted

A FEW ADVANTAGES OF THIS FLASHER OVER ALL OTHERS:

First.—The Price is lower.
Second.—It has fewer parts and is therefore the simplest flasher on the market.
Third.—It has no motor to cause trouble and consume current.
Fourth.—It costs nothing to operate this flasher.
Fifth.—It only occupies a space of 5 x 8 inches.
Sixth.—It can be regulated to flash any signs or show window lights in any manner desired.
Any combination of lights, without motor or cylinder.
Simplest and best on the market.
Works on any current.
The disadvantage of a flasher was the motor question.
We have overcome this and are putting out an article that meets a long felt want.

As a Practical Book for Practical Men Spangenberg's Book Ranks First
All the engineering information you should have; all you really need is contained in this book in plain, practical and concise form.

Spangenberg's Steam and Electrical Engineering

Is a complete library covering the subject in all its various branches and contains 672 pages.

The only book ever published containing 1035 questions and answers. Written so you can understand it.

$3.50 is the price, and it is sold with the understanding that it may be returned if not satisfactory, and your money will be refunded immediately. Out of 10,000 books sold only two have been returned. This fact speaks for itself.

Bound in Silk Cloth.
Size 6x9. 672 pages. 648 Illustrations.

CUT OUT AND MAIL TO-DAY

GEO. A. ZELLER BOOK COMPANY
42 S. Fourth Street St. Louis, Mo.

I accept your offer to send me, express prepaid, one of Spangenberg's Steam and Electrical Engineering, price $3.50, and enclose $2 as first payment. The balance, $1.50, I agree to remit in 50 cent monthly installments, money or express order or Stamps.

BACK of the facts about Packard Lamps are the reasons for the facts. The high efficiency and long life of Packard Lamps are due to a good glass bulb, perfect vacuum, and delicate, yet strong and tenuous filament. Bear down heavy on the filament. It's the pride, the mainstay of the lamp. But it takes the combination mentioned to make the perfect lamp, which is called the "Packard."

Sold at minimum prices. Special terms on contract.

QUALITY IS THE CORNER STONE in the building of success. Mere cheapness never established a lasting reputation for a product.

In the making of "P & S" sockets, we have aimed at highest quality and we have won.

None but the best materials have been allowed to enter into the making; copper has been used instead of brass or copper plated material in our contact shells.

They are DOUBLE POLE; others are single. Ours eliminate the chance of grounding, others admit of the possibility.

You want quality—then order "P & S"—"THE ONE WITH THE DOUBLE POLE."

PREDOMINATES IN 27 States

"IT gives me great pleasure to state, that for 'Gitthereitiveness' your periodical certainly is a winner. As you perhaps are aware, the company I travel for, advertises in all the electrical papers, and it has been a question in my mind whether they reached every central station, as their advertising manager would have our company believe. So, for one year I have kept account of the electrical papers and peridieals subscribed for and received by the manager or superintendent of electric light companies in twenty-seven states, (which has been my territory), and in summing it up, I find that your periodieal predominates, three to one. I do not get in many telephone plants, but when I do, I invariably find the 'Western Electrician' staring me in the face."

The letter from which the above is taken, is dated May 8, 1905, and is on file in this office.

WANTED, FOR SALE *and similar* **WANT COLUMN** *advertisements (50 words or less), $1.50 an insertion; additional words 3c each* **POSITION WANTED** *advertisements (50 words or less), $1.00 an insertion; additional words 2c each.*

is of inestimable value to electricians. Such a library is best formed by occasional and carefully chosen purchases. ELECTRICIAN PUB. CO., 510 Marquette Building, Chicago.

As Sure As The Sun

Edison Primary Batteries

Formerly Edison-Lalande

One of their distinctive features is the sure and constant current delivery. They are so constructed that internal resistance grows less with use, polarization is completely obviated, and they work at full strength until all the energy of every element is exhausted. It will pay you to investigate their other points of superiority. Write for booklet No. 7.

A Great Combination

The Business Man's Magazine and The Bookkeeper

is the oldest, largest and best of all business magazines. It not only tells you what is being done in business, but how it is done. All of the latest methods for conducting every department of any business are described, and every detail is fully illustrated.

Subscription Price, $1.00

Business Short Cuts

is a book of 160 pages (5x7 in.) of the concentrated business experience of a hundred successful business men. Read it and it will save you ten dollars' worth of time, for it contains scores of short methods and easy ways of doing the things you are spending most of your time upon every day. The men who originated these short cuts get $25.00 to $50.00 a day—their experience here cost you nothing—not a penny. More than 16,000 business men have bought Short Cuts at $1.00 a copy.

As a reader of

The Western Electrician

you already know its value to you. We have made arrangements with the publisher of this excellent journal which enable us to offer you a years' subscription (regular price $3.00) in connection with The Business Man's Magazine and The Book-Keeper.

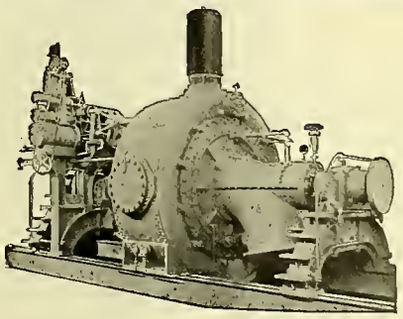
SAMSON TURBINE



The illustration shows the large NIAGARA design, HORIZONTAL SHAFT TURBINES recently installed by us, for the NIAGARA FALLS HYDRAULIC POWER & MANUFACTURING CO., Niagara Falls, N. Y. Tests conducted by competent engineers, developed as follows:

Head	Gateage	Speed	H. P.	Generator Efficiency	Turbine Efficiency
213 ft.	½	257 r. p. m.	1750	95 per cent	73.00 per cent
213 ft.	¾	257 r. p. m.	3000	95 per cent	85.60 per cent
213 ft.	Full	257 r. p. m.	3500	95 per cent	81.50 per cent

These results have never been equaled by any turbine of the Horizontal Shaft Design, operating under equally HIGH HEADS. The test was made AFTER TURBINES WERE INSTALLED, direct coupled to generators. Francis' weirs and formulæ for discharge were used. The original test reports on file at our offices. These turbines are all fitted with our SAMSON BALANCED GATES. Note especially the UNIFORM SPEED at ALL GATEAGES.

THE COLUMBUS EVENING DISPATCH, WEDNESDAY, SEPTEMBER 6, 1905.

TELEPHONE SECURITIES IN GOOD DEMAND ON THE LOCAL STOCK EXGHANGE

Installation of the New System Has Greatly Stimulated Interest in the Company.

Caleb L. McKee & Co. say—"Columbus Citizens' Telephone preferred is in good demand at 103½, while nothing was offered below 105¼, and it seems quite firm at the latter figure. The installation of the new system has materially stimulated interest in this security and at the same time has had the effect of tightening it up to a considerable extent, as sellers are very scarce.

A PRACTICAL BOOK FOR PRACTICAL MEN

"MODERN WIRING DIAGRAMS AND DESCRIPTIONS FOR ELECTRICAL WORKERS."

By Henry C. Horstmann and Victor H. Tousley. 160 pages, over 200 illustrations. Full leather binding, red edges. Pocket size 4 x 6. Price, net, $1.50.

A work that not only tells you how to do it, but shows you.

THIS BOOK tells how to wire for call and alarm bells. For burglar and fire alarm. How to run bells from dynamo current. How to install and manage batteries. How to test batteries. How to test circuits. How to wire for annunciators; for telegraph and gas lighting. It tells how to locate "trouble" and "ring out" circuits. It tells about meters and transformers. It contains 30 diagrams of electric lighting circuits alone. It explains dynamos and motors; alternating and direct current. It gives 10 diagrams of ground detectors alone. It gives "Compensator" and Storage Battery installation. It gives simple and explicit explanations of the "Wheatstone Bridge" and its uses as well as volt meter and other testing. It gives a new and simple wiring table, covering all voltages and all losses or distances, etc., etc.

Wagner Electric Mfg. Co.

ST. LOUIS, MO.

If we could make you feel all the good points of our motors as we know them. If we could convey to you that knowledge of their absolute reliability which years of association with them has stamped on the minds of our customers, we are sure that you would join the ranks of the many successful Station Managers, who have established a day single phase power service and through the medium of these motors rapidly and profitably extended their business.

The benefits of your buying a Wagner Motor are not confined to this company, they are shared by you. We reap the first benefit of making the sale, all the rest of the good is yours; satisfied customers, no repairs, no trouble. The steady stream of motors coming out of our shipping room gives ample proof of the growing importance of the Single Phase Motor in the development of Central Station business.

If you do not know all that you should about this subject write for bulletin No, 68 H, we will see that information comes to you.

OKONITE IT NEVER DISAPPOINTS

Moulded Mica Sockets

Are absolutely water-proof *on top* and are furnished with *New Code* rubber covered braided lead wires.

For street and park decoration nothing can equal them in service and durability. They can be used anywhere an ordinary socket can but are not recommended for a temperature greater than 125° F. or over 125 volts.

They can be used in paper mills, breweries, laundries, tunnels and other damp places without any deterioration whatever, and are acknowledged the most durable form of electric light sockets made.

If you are interested enough to know more ask for catalog No. 14c

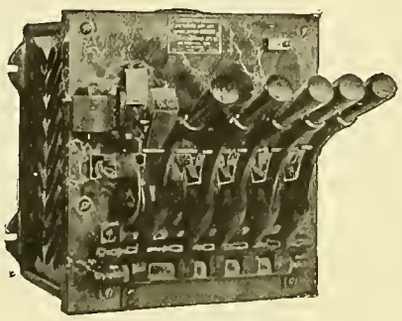
Manufacturers of Asbestos and Magnesia Pipe and Boiler Coverings, Asbestos Packings, Roofing, Etc.

100 WILLIAM STREET, NEW YORK

New York, Milwaukee, Chicago, Boston, Philadelphia, St. Louis, Pittsburg, Cleveland, San Francisco, Los Angeles, Seattle, Kansas City, Minneapolis, Little Rock, New Orleans, London, Paris, Brussels.

Multiple Switch Type Starter



This is the best type of starter to use on motors from 50 H. P. up because it is much more compact than the sliding type of starter, and in addition does not spark.

By an interlocking arrangement the switches cannot be thrown in except in their proper order, and in case of no voltage the same arrangement causes them to drop consecutively out of contact.

St. Marys Incandescent Lamp Co.

ST. MARYS, PA.

ANNOUNCEMENT

TO ALL INCANDESCENT LAMP BUYERS:

For 15 years I have been active in the sale of incandescent lamps, having been indentified with several of the leading companies.

On July 1, 1905, I organized the Eureka Electric Lamp Company, which company had the purpose of yielding to the conditions and selling restrictions of the association of Licensed Manufacturers of Electric Incandescent Lamps, provided a license was immediately extended.

The Association was given full opportunity to issue this license to the Eureka Electric Lamp Company, but, having no reply before the time limit given had expired, except an intimation through one of the Association's members that a deposit of $2,000 was necessary as a guarantee that the company should not cut prices, I decided to free myself from all "Associations" entanglements. My purpose in refusing to accede to this deposit proposition was because of the fact that my sales in the past had always been at higher figures than quoted by many of the Licensed Companies and because of my intimate knowledge of the lamp situation, especially as to the emptiness of these patents, except for their questionable value in cajoling the public. Moreover, we were under obligations to fill certain contracts on hand and further delay was impossible.

It later developed that moves had been made to prevent any licensed company from furnishing lamps to the Eureka Electric Lamp Comany at a figure such as would enable The Eureka Company to do business.

Because of this threatened procedure, I am now able to announce the mergement of The Eureka Electric Lamp Company into the St. Marys Incandescent Lamp Company, St. Marys, Pa., with a capital stock of $100,000.

The St. Marys Incandescent Lamp Company will have a factory in operation with the finest mechanical equipment that money can buy, within 60 days, and the best skilled men in the manufacturing department. It will have a capacity of 6,000 lamps per day with space for rapid increase of output. It will have a well-organized up-to-date sales department.

The following is a list of the stockholders of the St. Marys Incandescent Lamp Company:

Senator J. K. P. Hall, of the firm of Hall & Kaul, St. Marys, Pa, and the firm of Kaul & Hall, St. Marys, Pa.; President of the St. Marys National Bank. St. Marys, Pa.; President of the St. Marys Trust Company, St. Marys, Pa.; President of the Kaul & Hall Lumber Company, St. Marys, Pa., President of the Portland Lumber Company, St. Marys, Pa.

Louis Streuber, Erie, Pa.; Vice-President of the St. Marys Sewer Pipe Company, St. Marys, Pa.; President of the Erie Oil Company, Erie, Pa.

Frank Oberkirch, President of the St. Marys Sewer Pipe Company, St. Marys, Pa.

John Kaul, Vice-President of the Kaul & Hall Lumber Company, St. Marys, Pa.

William Kaul, President of the St. Marys Brewing Company, St. Marys, Pa.

D. B. Anderson, General Manager of the St. Marys Sewer Pipe Company, St. Marys, Pa.

Wm. M. Rothschild, President of the Eureka Electric Lamp Company, Cleveland, O.

G. C. Simons, Vice-President, The St. Marys National Bank, St. Marys, Pa.

The Officers and Board will be announced in a later issue.

WM. M. ROTHSCHILD
President, The Eureka Electric Lamp Co.

PREDOMINATES
IN
27 States

"IT gives me great pleasure to state, that for 'Gitthereitiveness' your periodical certainly is a winner. As you perhaps are aware, the company I travel for, advertises in all the electrical papers, and it has been a question in my mind whether they reached every central station, as their advertising manager would have our company believe. So, for one year I have kept account of the electrical papers and periodicals subscribed for and received by the manager or superintendent of electric light companies in twenty-seven states, (which has been my territory), and in summing it up, I find that your periodical predominates, three to one. I do not get in many telephone plants, but when I do, I invariably find the 'Western Electrician' staring me in the face."

The letter from which the above is taken, is dated May 8, 1905, and is on file in this office.

WANTED, FOR SALE *and similar* **WANT COLUMN** *advertisements (50 words or less), $1.50 an insertion; additional words 3c each.* **POSITION WANTED** *advertisements (50 words or less), $1.00 an insertion; additional words 2c each.*

POSITION WANTED

Party with 12 years experience in shop work, wiring and running engines desires responsible position with some good firm. Address Box 531, care Western Electrician, 510 Marquette Building, Chicago.

POSITION WANTED.

By a single middle-aged man of strictly good habits having a general knowledge of electrical machinery and appliances. Would take agency or act as collector and adjustor—no objection to traveling; salary not so much an object as steady position where limited but faithful services would be appreciated. Can furnish best of reference and bond if required. "Principals only." Address Box 539, care of Western Electrician, 150 Nassau Street, New York, N. Y.

WANTED

A young man with experience to act as selling engineer. A man with practical shop experience as well as ability as a salesman can make permanent arrangements. Give all particulars as to past experience, reference, etc. Address Room 809, No. 1265 Broadway, New York City.

WANTED.

Man who understands inside and outside line-work; care and repairing of meters, motors, transformers, and arc lamps and general work around a light plant. Permanent position and advancement for right man. Single man preferred. Salary to begin with $65 per month. Send references with first letter. Address box 540 care of Western Electrician, 510 Marquette building, Chicago.

WANTED.

A competent electrician who is able to take every part of the work pertaining to an electric plant. Must be 35 years of age, and several years experience; must give several references as to character and ability as a foreman. Wages $900 per year, lights and phone furnished. House rent good at $12; city of four thousand. Address Box 538, care of Western Electrician, 510 Marquette building, Chicago.

TELEPHONE ENGINEERS.

Engineers of experience with telephone manufacturers will gain information to their interest by writing to Box 1732 General Post Office, New York City, in regard to business openings. State nature of present work and name of employer as well as age, experience and salary expected.

A Book Proposition

We want to dispose of our shelf-worn books. Most of them are works usually to be found in scientific libraries, and we believe you will approve the plan by which you can secure some of them practically without cost. The list follows:

	List Price	Sale Price
The Corliss Engine, by John T. Henthorn and Charles D. Thurber, New York, 1894	$1.00	$ .40
Mechanical Manual, by E. L. Hobson, Philadelphia, Pa.	.50	.20
Theoretical Elements of Electro Dynamic Machinery, by A. E. Kennelly, F. R. A. S., London, 1893	1.50	.75
Secret Letter and Telegraph Code, by Charles Larrabee, New York, 1884	.60	.20
Electricity, Magnetism and Electric Telegraphy, by Thomas D. Lockwood, New York, 1890	2.50	1.00
Handbook of Patent Law, by Charles B. Mann, Baltimore, 1884	.50	.20
A Treatise on Electro Metallurgy, by Walter G. McMillan, F. C. S., London, 1890	3.50	1.75
Laboratory Manual of Physics and Applied Electricity, Vols. 1 and 2, by Edward L. Nichols, New York, 1894	6.25	2.50
Condensers, by "Power," New York, 1900	.50	.20
Aluminum, Its History and Occurrence, Properties, Metallurgy and Applications, by Joseph W. Richards, M. A., Philadelphia, 1890	6.00	2.75
Electric Light Installations, Vol. 3. Application by Sir David Salomons, M. A., New York, 1890	1.50	.75
Electricity in Town and Country Houses, by Percy E. Scrutton, London, 1898	1.00	.50
Press Working of Metals, by Oberlin Smith, New York, 1896	3.00	1.75
Outlines of Industrial Chemistry, by F. H. Thorp, Ph. D., New York, 1898	3.50	1.75
Evolution of the Electric Incandescent Lamp, by Franklin Leonard Pope, Elizabeth, N. J., 1889	1.00	.50
Power Catechism, New York, 1889	2.00	.75
Electric Light Installations, Vol. 2, Apparatus, by Sir David Salomons, M. A., London, 1894	2.25	1.25
Electricity Simplified, by T. O'Connor Sloane, Ph. D., New York, 1897	1.00	.50
How to Become a Successful Electrician, New York, 1899	1.00	.50
Dynamo Electric Machinery, by Silvanus P. Thompson, D. Sc., American edition, New York, 1902	5.00	2.75
Polyphase Electric Currents and Alternating Current Motors, by Silvanus P. Thompson, New York, 1898	3.50	1.75
How to Run Engines and Boilers, by E. P. Watson, New York, 1901	1.50	.75
Drum Armatures and Commutators, by F. Marteo Weymouth, London, 1893	3.00	1.50
Handbook for Street Railway Engineers, by H. B. Andrews, C. E., New York, 1902	1.25	.60
Electric Transformation of Power, by Phillip Atkinson, Ph. D., New York, 1893	2.00	1.00
Electric Sparks, Electricity in All Its Branches and Applications, Prof. James A. Beaton, A. M., Chicago, 1901.	.50	.20
Mechanical Engineers' Pocket Book, by D. Kinnear Clark, M. I. C. E., New York, 1893	3.00	1.25
Mechanics' Complete Library of Modern Rules, Facts, Processes, Etc., Chicago, 1900	1.00	.50
The Electrical Transmission of Energy, by Arthur Vaughan Abbott, C. E., New York, 1900	4.50	2.00
Telephone Systems of the Continent of Europe, by A. R. Bennett, London, 1895	4.50	2.00
Motor Power and Gearing for Electrical Machinery, by E. T. Carter, C. E., London, 1896	5.00	2.25
Textbook on Gas, Oil and Air Engines, by Bryan Donkin, London, 1896	7.00	3.25
Practical Application of the Indicator, by Lewis M. Ellison, Chicago, 1897	2.50	1.00
Alternating and Interrupted Electric Currents, by Prof. G. Forbes, M. A., London, 1895	1.00	.50
Central Station Management and Finance, by H. A. Foster, New York, 1899	1.50	.75
American Telephone Practice, by Kempster B. Miller, New York, 1903	3.00	2.00
Practical Electricity and Magnetism, by John Heoderson, B. Sc., London, 1898	2.00	1.00
Original Papers on Dynamo Machinery, by John Hopkinson, M. A., New York, 1893	1.00	.50
Practical Notes for Electrical Students, Vol. I, Laws, Units and Simple Measuring Instruments, by A. E. Kennelly and H. D. Wilkinson, M. I. E. E., London, 1890	2.50	1.25
Patented Telephony, Chicago, 1897	1.50	.60
Turbine Wheels, by Prof. W. P. Trowbridge, New York, 1890	.50	.20
History of the Transformer, by F. Uppenborn, paper, London, 1889	.75	.30
Electro Motors, by J. W. Urquhart, London, 1882	3.00	1.00
Practical Guide for Firemen, W. H. Wakeman, Bridgeport, Conn., 1896	.50	.20
Researches or Fresh Light on the Dynamic Action and Ponderosity of Matter, by "Waterdale," London, 1892	2.00	.60
Practical Wiring of Buildings, by E. D. Weber, New York, 1896	1.00	.40
Deviations of Practical Electrical Units, by Lieut. F. B. Badt and Prof. H. T. Carhart, Chicago, 1890	.75	.35
Electricity as a Motive Power, by Count Th. du Moncel, London, 1883	3.00	1.25
Decorative Electricity, by Mrs. J. E. H. Gordon, London, 1891	2.50	1.00
Electrical Appliances of the Present Day, by Major D. P. Heap, U. S. A., being a report of the Paris Electrical Exhibition of 1881	2.00	.75
Tables and Memoranda for Electrical Engineers, by Frederick Walker, C. E.	.80	.25
Steam Heating Data, by William J. Baldwin, N. Y., 1897.	.50	.20
The Telegraphist's Guide: The New Examinations of Technical Telegraphy, by James Bell, A. I. E. E., London, 1895	.50	.20
The Mechanical Arts Simplified, by D. B. Dixon, Chicago, 1897	2.50	1.25
Electric Lighting, translated from the French of Count du Moncel, by Robert Routledge, B. S. C., London, 1883	1.25	.60
The Arithmetic of the Steam Engine, by E. Sherman Gould, New York, 1897	1.00	.40
Mechanical Graphics, by George Halliday, London, 1889.	2.00	.75
Physical Units, by Magnus Maclean, D. Sc.	1.00	.40
The Indicator and Dynamometer, by Thomas J. Main, M. A., Philadelphia, 1883	1.50	.70
The Indicator Handbook, by Charles N. Pickworth	.75	.25

Telegraphy, by W. H. Preece and J. Sivewright, London, 1888	2.00	1.00
Electricity and the Electric Telegraph, in two volumes, by George B. Prescott, New York, 1888	7.00	3.25
Useful Rules and Tables, Relating to Measuration, Engineering, Structures and Machines, by William John Macquorn Rankine, London, 1889	4.00	1.60
Electricity and Magnetism, by Francis Nipher, A. M., St. Louis, 1895	3.25	1.50
The Action of Lightning, by Arthur Parnell, London, 1882	3.00	1.20
Modern American Methods of Copper Smelting, by Edward Dyer Peters, Jr., M. E., New York, 1891	5.00	2.25
The Steam Boiler Catechism, by Robert Grimshaw, M. E., New York, 1896	2.00	.75
A Guide for the Electrical Testing of Telegraph Cables, by Col. V. Hoskiaer, London, 1889	1.50	.60
Solutions of the Questions in Magnetism and Electricity, set at the Intermediate Science and Preliminary Scientific Pass Examinations of the University of London, 1860 to 1884, by F. W. Levander, London, 1885	1.00	.25
Domestic Electricity for Amateurs, translated from the French of Hospitalier, London, 1889	2.50	.90
Gray's Treatise on Magnetism and Electricity, Vol. I, by Andrew Gray, LL. D., F. R. S., London, 1898	4.50	2.50
Electricity, by Robert M. Ferguson, Ph. D., D. R. S. E., London, 1890	1.50	.75
Coil and Current, or the Triumphs of Electricity, by Henry Frith, London, 1897	1.25	.50
A Century of Electricity, by T. C. Mendenhall, Cambridge, 1887	1.25	.50
Magnetism and Electricity, by Arthur William Poyser, M. A., London, 1890	.80	.25
Potential and Its Application Popularly Treated, by Dr. Tumlirz, London, 1889	1.50	.65
Continental Electric Light Central Stations, Killingworth Hedges, London, 1892	6.00	2.85
Theory of Electricity, by Linnaenus Cummiog, M. A., London, 1885	2.25	1.00
Electricity Treated Experimentally, by Linnaeus Cumming, M. A., London, 1891	1.50	.75
Popular Electric Lighting, by Capt. E. Ironside Bax, London, 1892	1.00	.40
The Age of Electricity, by Park Benjamin, New York, 1892	2.00	.90
The Law Relating to Electric Lighting, by G. Spencer Bower, B. A., London, 1889	5.00	1.80
Mathematical Theory of the Steam Engine, by T. Baker, C. E., London, 1890	.75	.25
Elementary Treatise on Natural Philosophy, by A. Privat Deschanel, Part 3, Electricity and Magnetism, New York, 1893	1.50	.80
Electricity in Modern Life, by G. W. De Tunselmann, London, 1889	1.25	.60

As long as they last (we have but a few copies of each) we will send them to you ABSOLUTELY FREE to the amount of 50 per cent of your purchases of other books—that is, books not included in the above list. For example, if you send $5.00 for the famous Hand-Book Series, namely, New Dynamo Tenders' Hand-Book, Bell Hangers' Hand-Book, Incandescent Wiring Hand-Book, Electric Transmission Hand-Book and Telephone Hand-Book, we will allow you to select from the list of shelf-worn books to the amount of $2.00 **list prices.**

Or we will fill your orders for any of these books at the sale prices given.

You would better send your orders early thereby gaining the advantage of a first choice.

12½ Gals. per 100 Kw. Hours

SUITABLE FOR ALL STATIONARY POWER

For further information address

AMERICAN DIESEL ENGINE COMPANY

11 Broadway NEW YORK

IF YOU KNEW that every meter on your lines under-registered 15 per cent **you would lie awake nights.** However, your boiler plant does as much (needlessly wastes 10 to 20 per cent of the heat value of the fuel) if it is not provided with a **Green Fuel Economizer.** If you will take the temperature of the gases leaving your boilers (400° to 700° F., according to the boiler and method of firing) and remember that this heat could be utilized in heating feed water up to the boiling point, you will be ready to believe this. Moreover, exhaustive, scientific tests by well known engineers, Dean & Main, Geo. H. Barrus and others, conclusively prove that **it is true. You are needlessly sending 10 to 20 per cent** of your **coal pile up the chimney.** Of course these remarks are not meant for you if you are one of the several hundred thousand well-satisfied users of Green Fuel Economizers whose names we have published. That isn't all. When the "peak" of your load comes on, the greater the reserve capacity in the boiler plant the better your digestion. You do not worry about sudden demands for power when you know that the Green Fuel Economizer contains several times your boiler capacity of **water at the boiling point**, ready to be turned into steam the moment the drafts are opened. You do not worry about the boilers when you know they are not being injured by having cold water pumped into them, and when you know that sediment that would otherwise incrust them is being precipitated in the Green Fuel Economizer.

We have a book giving **tables, formulae and drawings of** Economizer plants and everything required thoroughly to understand this subject, which we are now giving away to those who ask for it. Drop us a postal card and we know that you will be well repaid for your trouble. Ask also for our catalogue of Fans, Blowers and Exhausters.

TELEPHONE SECURITIES IN GOOD DEMAND ON THE LOCAL STOCK EXCHANGE

Installation of the New System Has Greatly Stimulated Interest in the Company.

Caleb L. McKee & Co. say—"Columbus Citizens' Telephone preferred is in good demand at 103½, while nothing was offered below 105¼, and it seems quite firm at the latter figure. The installation of the new system has materially stimulated interest in this security and at the same time has had the effect of tightening it up to a considerable extent, as sellers are very scarce.
"Columbus Railway common is call

Our automatic System always does it,— strengthens the securities and keeps them strong because there's value back of them. It will do the same for yours.

OUR AUTOMATIC SYSTEM ADOPTED IN THE FOLLOWING CITIES:

Locations for Industries

Erie Railroad

Chicago to New York

The Erie Railroad Company's Industrial Department has all the territory traversed by the railroad districted in relation to resources, adaptability, markets and advantages for manufacturing, and can advise with manufacturers in relation to the most suitable locations. For full information address

LUIS JACKSON
Industrial Commissioner, Erie Railroad Company
21 Cortlandt Street, New York

As your ad in the Western Electrician will be read, you will never be blue.

POLE DEALERS ADVERTISING IN THE WESTERN ELECTRICIAN OBTAIN MOST EXCELLENT RESULTS BECAUSE IT PLACES THEM IN TOUCH WITH ACTUAL BUYERS OF POLES. TRY A CARD.

CENTRAL STATION HEATING

We are the originators and builders of the ONLY underground system of live and exhaust steam heating. Our system is used for the utilization and distribution of exhaust steam from electric-light and power plants, for heating residences, stores, public buildings, etc. 250 plants in successful financial and mechanical operation. We have the only practical Steam Meter. Also manufacturers of Wooden Water Pipe, Steam Pipe Casing, Steam Traps, Condensation Meters, Valves, Economizing Coils, Separators, and a full line of Steamfitters' Supplies.

A New Railway Type Circuit Breaker

The simplest and most modern design now on the market

Dimensions { Length 11 inches
Breadth 9 inches
Depth 6 inches

You will find it profitable to place this new breaker in your cars. It combines an automatic circuit breaker and a main switch in one piece of apparatus.

It automatically opens the circuit in case of an overload or short circuit, and can be operated by hand to cut out the car from trolley line; the circuit can be quickly closed by hand.

The jaws have detachable arcing pieces, which are easily replaced when worn out or burnt away, all parts of the mechanism being readily accessible when the cover is removed.

"ROOKERY"—Chicago

Fort Wayne Electric Works

TYPE A TRANSFORMERS ARE SHELL TYPE TRANSFORMERS

Type A
Coils and Core

THREE OF THE MANY ADVANTAGES OF THE SHELL TYPE OVER THE CORE TYPE ARE:

COOLER OPERATION

The cool circulating oil carries the heat away from core, secondary coils and primary coils alike.

BETTER REGULATION

Shorter lengths of copper are used with this type. Hence smaller copper losses and better regulation.

BETTER INSULATION

Since primary and secondary coils are wound, insulated and assembled independently of each other, a much higher insulation is obtained.

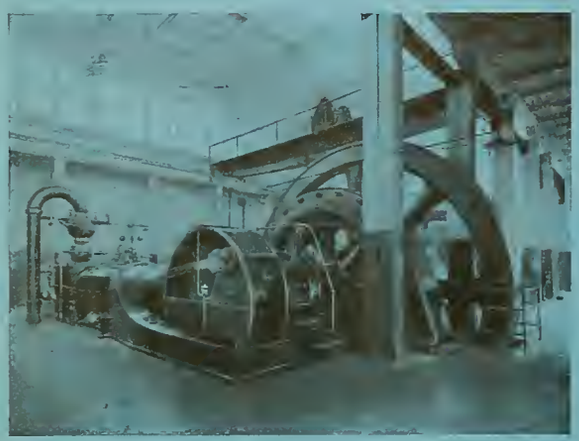
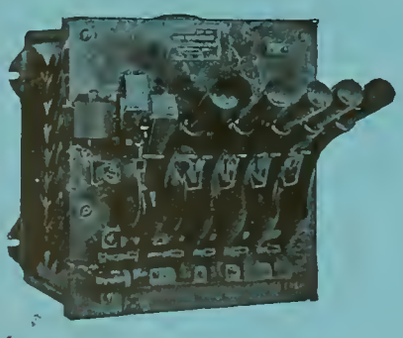
Reynolds Corliss Engines



All Types
All Sizes
For All Purposes

Our engines are to be found in the principal power plants of this country and abroad. They furnish power to operate more electric cars than engines of all other makes combined.

Multiple Switch Type Starter



This is the best type of starter to use on motors from 50 H. P. up because it is much more compact than the sliding type of starter, and in addition does not spark.

By an interlocking arrangement the switches cannot be thrown in except in their proper order, and in case of no voltage the same arrangement causes them to drop consecutively out of contact.

Wagner Electric Mfg. Co.

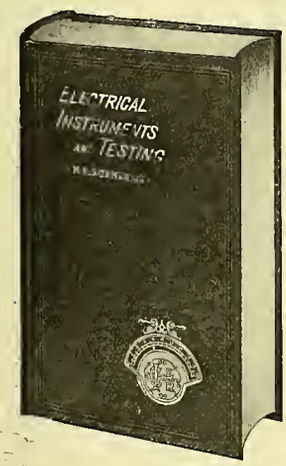
ST. LOUIS, MO.

If we could make you feel all the good points of our motors as we know them. If we could convey to you that knowledge of their absolute reliability which years of association with them has stamped on the minds of our customers, we are sure that you would join the ranks of the many successful Station Managers, who have established a day single phase power service and through the medium of these motors rapidly and profitably extended their business.

The benefits of your buying a Wagner Motor are not confined to this company, they are shared by you. We reap the first benefit of making the sale, all the rest of the good is yours; satisfied customers, no repairs, no trouble. The steady stream of motors coming out of our shipping room gives ample proof of the growing importance of the Single Phase Motor in the development of Central Station business.

If you do not know all that you should about this subject write for bulletin No. 68 H, we will see that information comes to you.

TRANSFORMERS INSTRUMENTS



LATEST AMERICAN AUTHORITY

ON

Electrical Testing

By

Norman H. Schneider

Chief Constructing Electrical Engineer
White City, Collinswood, O.

A book for every man who is interested in Electrical work.

You Should Have This Book

BECAUSE:

- It is written for the practical man.
- It gives the very latest information.
- It treats of modern instruments universally adopted.
- It contains a complete chapter on testing with the Voltmeter not explained in any other book.
- The formulas given are fully explained and worked out in simple arithmetic.
- The tests given are such as occur every day in the engine room, power house, telephone exchange, cable laying and constructors' work in the field.
- It is written by a man who has had extensive practical experience in all branches of electrical testing.
- It is a well made book and sold at a reasonable price.

210 pages, over one hundred illustrations and tables, handsome limp leather, postpaid. **Price, $2.00**

SPON & CHAMBERLAIN

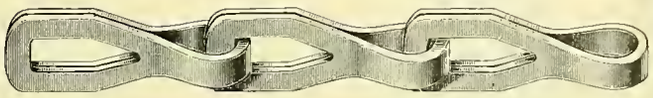
50 FEET

"Oneida" Galvanized Chain

EXPRESS PREPAID



Our flexible steel chain (American pattern) herewith illustrated will outwear cord, cable or rope many times over.

Give it a trial for raising and lowering Arc Lamps suspended from Mast Arms.

You will use no other attachment after making this test as "Oneida" Galvanized Chain is absolutely uniform in strength.

HEAVILY GALVANIZED!
RUST PROOF!

You need have no fear of your lamps falling to the street as happens so unexpectedly when strands of cable give way or a rope has rotted out.

MANUFACTURED BY

ONEIDA COMMUNITY, Ltd.

ONEIDA, NEW YORK.

Branch Factory, Niagara Falls, Ont. Can.

A Book Proposition

We want to dispose of our shelf-worn books. Most of them are works usually to be found in scientific libraries, and we believe you will approve the plan by which you can secure some of them practically without cost. The list follows:

	List Price	Sale Price
The Corliss Engine, by John T. Henthorn and Charles D. Thurher, New York, 1894	$1.00	$ .40
Mechanical Manual, by E. L. Hobson, Philadelphia, Pa.	.50	.20
Secret Letter and Telegraph Code, by Charles Larrabee, New York, 1884	.60	.20
Electricity, Magnetism and Electric Telegraphy, by Thomas D. Lockwood, New York, 1890	2.50	1.00
Handbook of Patent Law, by Charles B. Mann, Baltimore, 1884	.50	.20
A Treatise on Electro Metallurgy, by Walter G. McMillan, F. C. S., London, 1890	3.50	1.75
Laboratory Manual of Physics and Applied Electricity, Vols. 1 and 2, by Edward L. Nichols, New York, 1894	6.25	2.50
Condensers, by "Power," New York, 1900	.50	.20
Aluminum, Its History and Occurrence, Properties, Metallurgy and Applications, by Joseph W. Richards, M. A., Philadelphia, 1890	6.00	2.75
Electric Light Installations, Vol. 3. Application by Sir David Salomons, M. A., New York, 1890	1.50	.75
Press Working of Metals, by Oberlin Smith, New York, 1896	3.00	1.75
Outlines of Industrial Chemistry, by F. H. Thorp, Ph. D., New York, 1898	3.50	1.75
Evolution of the Electric Incandescent Lamp, by Franklin Leonard Pope, Elizabeth, N. J., 1889	1.00	.50
Power Catechism, New York, 1889	2.00	.75
Electric Light Installations, Vol. 2, Apparatus, by Sir David Salomons, M. A., London, 1894	2.25	1.25
Electricity Simplified, by T. O'Connor Sloane, Ph. D., New York, 1897	1.00	.50
How to Become a Successful Electrician, by T. O'Connor Sloane, Ph. D., New York, 1899	1.00	.50
Dynamo Electric Machinery, by Silvanus P. Thompson, D. Sc., American edition, New York, 1902	5.00	2.75
Polyphase Electric Currents and Alternating Current Motors, by Silvanus P. Thompson, New York, 1898	3.50	1.75
How to Run Engines and Boilers, by E. P. Watson, New York, 1901	1.50	.75
Drum Armatures and Commutators, by F. Marteo Weymouth, London, 1893	3.00	1.50
Handbook for Street Railway Engineers, by H. B. Andrews, C. E., New York, 1902	1.25	.60
Electric Transformation of Power, by Phillip Atkinson, Ph. D., New York, 1893	2.00	1.00
Mechanical Engineers' Pocket Book, by D. Kinnear Clark, M. I. C. E., New York, 1893	3.00	1.25
Mechanics' Complete Library of Modern Rules, Facts, Processes, Etc., Chicago, 1900	1.00	.50
The Electrical Transmission of Energy, by Arthur Vaughan Abbott, C. E., New York, 1900	4.50	2.00
Telephone Systems of the Continent of Europe, by A. R. Bennett, London, 1895	4.50	2.00
Motor Power and Gearing for Electrical Machinery, by E. T. Carter, C. E., London, 1896	5.00	2.25
Textbook on Gas, Oil and Air Engines, by Bryan Donkin, London, 1896	7.00	3.25
Practical Application of the Indicator, by Lewis M. Ellison, Chicago, 1897	2.50	1.00
Alternating and Interrupted Electric Currents, by Prof. G. Forbes, M. A., London, 1895	1.00	.50
Central Station Management and Finance, by H. A. Foster, New York, 1899	1.50	.75
Original Papers on Dynamo Machinery, by John Hopkinson, M. A., New York, 1893	1.00	.50
Practical Notes for Electrical Students, Vol. 1, Laws, Units and Simple Measuring Instruments, by A. E. Kennelly and H. D. Wilkinson, M. I. E. E., London, 1890	2.50	1.25
Patented Telephony, Chicago, 1897	1.50	.60
Turbine Wheels, by Prof. W. P. Trowbridge, New York, 1900	.50	.20
Practical Guide for Firemen, W. H. Wakeman, Bridgeport, Conn., 1896	.50	.20
Researches or Fresh Light on the Dynamic Action and Ponderosity of Matter, by "Waterdale," London, 1892	2.00	.60
Derivations of Practical Electrical Units, by Lieut. F. B. Badt and Prof. H. S. Carhart, Chicago, 1890	.75	.35
Electricity as a Motive Power, by Count Th. du Moncel, London, 1883	3.00	1.25
Decorative Electricity, by Mrs. J. E. H. Gordon, London, 1891	2.50	1.00

Electricity in Modern Life, by G. W. De Tunselmann, London, 1889	1.25	.60

As long as they last (we have but a few copies of each) we will send them to you ABSOLUTELY FREE to the amount of 50 per cent of your purchases of other books—that is, books not included in the above list. For example, if you send $5.00 for the famous Hand-Book Series, namely, New Dynamo Tenders' Hand-Book, Bell Hangers' Hand-Book, Incandescent Wiring Hand-Book, Electric Transmission Hand-Book and Telephone Hand-Book, we will allow you to select from the list of shelf-worn books to the amount of $2.50 **list prices.**

Or we will fill your orders for any of these books at the sale prices given.

You would better send your orders early thereby gaining the advantage of a first choice.

Electrician Publishing Company

510 Marquette Building, CHICAGO

COLUMBIA LAMPS
GIVE MOST LIGHT

ESTABLISHED IN 1889.

More Light for Same Current Expenditure—
Same Light for Less Current Expenditure—

Sounds good doesn't it
The best part of it is that it's true

We respectfully invite a comparison of Columbia lamps with others, and call particular attention to the greater spherical Candle Power of the Columbia.

Send us an order for a case. You will need lamps this Fall and Winter: Get your order to us now.

PREDOMINATES IN 27 States

"It gives me great pleasure to state, that for 'Gitthereitiveness' your periodical certainly is a winner. As you perhaps are aware, the company I travel for, advertises in all the electrical papers, and it has been a question in my mind whether they reached every central station, as their advertising manager would have our company believe. So, for one year I have kept account of the electrical papers and periodicals subscribed for and received by the manager or superintendent of electric light companies in twenty-seven states, (which has been my territory), and in summing it up, I find that your periodical predominates, three to one. I do not get in many telephone plants, but when I do, I invariably find the 'Western Electrician' staring me in the face."

The letter from which the above is taken, is dated May 8, 1905, and is on file in this office.

WANTED, FOR SALE *and similar* **WANT COLUMN** *advertisements (50 words or less), $1.50 an insertion; additional words 3c each* **POSITION WANTED** *advertisements (50 words or less), $1.00 an insertion; additional words 2c each.*

POSITION WANTED.

By a single middle-aged man of strictly good habits having a general knowledge of electrical machinery and appliances. Would take agency or act as collector and adjustor—no objection to traveling; salary not so much an object as steady position where limited but faithful services would be appreciated. Can furnish best of reference and bond if required. "Principals only." Address Box 539, care of Western Electrician, 150 Nassau Street, New York, N. Y.

WANTED

An old established firm with excellent reputation wants salesmen acquainted with installing electrical apparatus, having also some knowledge of photography. Applicants please state full particulars, salary to begin with; references. All applications kept strictly confidential. Address box 542, care of Western Electrician, 510 Marquette Building, Chicago.

FOR SALE

Electric light plant in a No. 1 good town of 2,500. Located on main line of the C., B. & Q. R. R., in southwestern Iowa. Plant completely overhauled two years ago. New machinery, new Corliss engine, 20x42, 120 kilowatt and 30 kilowatt Westinghouse generators. Over 5,000 lights wired up. Good city street light contract and motor load. Day and night service. Coal in bins $1.74 per ton. We run retail coal yard in connection with plant. Good reasons for selling. Address box 541, care of Western Electrician, 510 Marquette Building, Chicago.

FOR SALE

To a good manager part interest in a $30,000 electric lighting plant. Gross income $12,000 a year. Purchaser to take full charge. Reason for sale owners too busy with their affairs to give plant attention. Greenville Electric Light, Heat & Power Co., Greenville, Ill.

TELEPHONE ENGINEERS.

Engineers of experience with telephone manufacturers will gain information to their interest by writing to Box 1732 General Post Office, New York City, in regard to business openings. State nature of present work and name of employer as well as age, experience and salary expected.

Second-Hand Machinery

1 24x18 Ideal Automatic Engine.

As Sure As The Sun

Edison Primary Batteries

Formerly Edison-Lalande

One of their distinctive features is the sure and constant current delivery. They are so constructed that internal resistance grows less with use, polarization is completely obviated, and they work at full strength until all the energy of every element is exhausted. It will pay you to investigate their other points of superiority. Write for booklet No. 7.

TELEPHONE SECURITIES IN GOOD DEMAND ON THE LOCAL STOCK EXGHANGE

Installation of the New System Has Greatly Stimulated Interest in the Company.

Caleb L. McKee & Co. say—"Columbus Citizens' Telephone preferred is in good demand at 103½, while nothing was offered below 105¼, and it seems quite firm at the latter figure. The installation of the new system has materially stimulated interest in this security and at the same time has had the effect of tightening it up to a considerable extent, as sellers are very scarce.
"Columbus Railway common is call

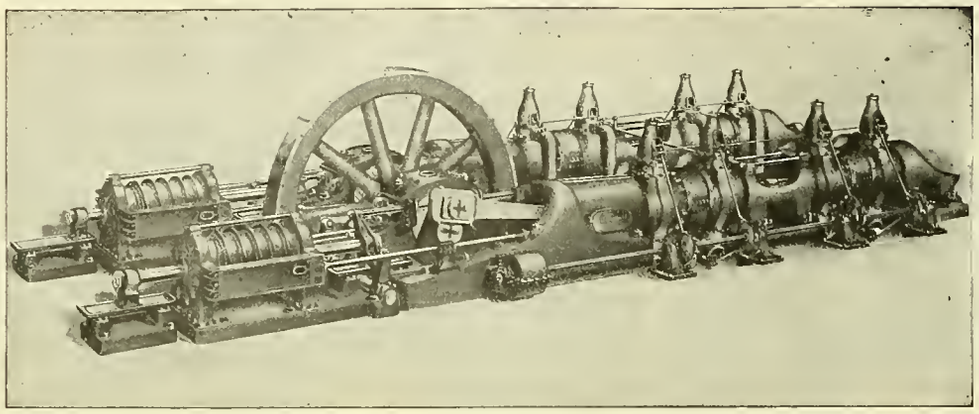
Westinghouse

Horizontal Double-Acting Gas Engines

Heavy Duty Type



3500 B. H. P. Westinghouse Twin Tandem Blowing Engine Units.

The illustration shows one of two units of this type recently contracted for by the Carnegie Steel Co., after the most exhaustive investigations both in American and foreign markets; their one aim was to secure the best equipment possible. This engine is equally adaptable to the driving of electric generators either direct or alternating current.

The Westinghouse Machine Co.

Address nearest sales office for particulars:

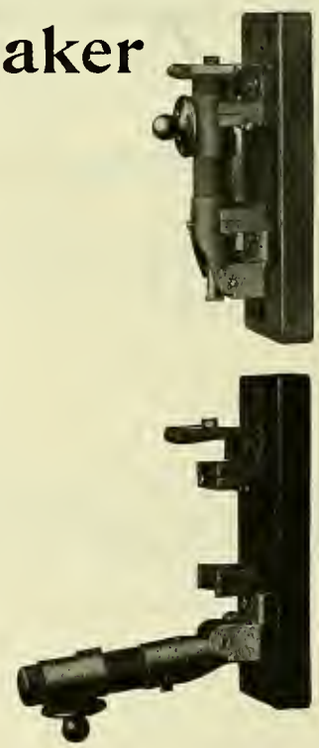
Denver, 512 McPhee Bldg. San Francisco, Hunt, Mirck & Co., 614 Mission St.

Westinghouse Type F Circuit Breaker



An adjustable cartomatic carbon break circuit breaker, costing only slightly more than a switch with enclosed fuses.

The simplest and most compact design on the market, and can be depended upon to operate successfully, and insure continuity of service wherever installed.

The tripping current may be adjusted between the limits of 80% and 160% of rated capacity by simply turning the thumb screw at base of breaker. By raising the small knob on the right hand side near the top, the breaker may be tripped by hand, thus acting as a simple switch.

Made in 12½, 25, 50 and 75 ampere sizes. Dimensions of base 8½x2¾ inches for all capacities. For 250 Volt D. C. and 440 Volt A. C. Circuits. Front Connection. Overload Release. Single Pole.

DUNCAN ELECTRIC MFG. CO.
LAFAYETTE INDIANA, U. S. A.

It Can't Be Beat—The Guthrie Flasher

A SIGN FLASHER WITHOUT A MOTOR

Agents Wanted

A FEW ADVANTAGES OF THIS FLASHER OVER ALL OTHERS:

First.—The Price is lower.
Second.—It has fewer parts and is therefore the simplest flasher on the market.
Third.—It has no motor to cause trouble and coosume current.
Fourth.—It costs nothing to operate this flasher.
Fifth.—It only occupies a space of 5 x 8 ioches.
Sixth.—It can be regulated to flash any sigos or show widow lights in any manner dasired.
Any combination of lights, without motor or cylinder.
Simplest and best on the market.
Works on any current.
The disadvantage of a flasher was the motor questioo.
We have overcome this and are puttiog out an article that meets a long felt want.

NO DIFFERENCE OF OPINION EXISTS in regard to the wisdom of using the best materials in electrical work. Here's a hint as to the best sort of socket.

Ordinary kinds have single pole
Ordinary kinds have plated or brass contact shells
Ordinary kinds lack full quality

The "P & S" sockets
Have DOUBLE POLES
Have solid copper contact shells
Eliminate chances of grounding
Only best materials and skillful workmanship

Hence—order "P & S" sockets—"THE ONE WITH THE DOUBLE POLE"

NEW "MORRISON" STORAGE BATTERY

THE CELL

This plate is so strong electrically and mechanically that no amount of electrical abuse or of vibration in traction service can dislodge even the slightest particle of its active material.

Lowest internal resistance of any storage battery in the world.

The weight efficiency is conservatively 14 watts per pound total weight, and electrical efficiency unsurpassed . . . .

STANDARD OF THE WORLD

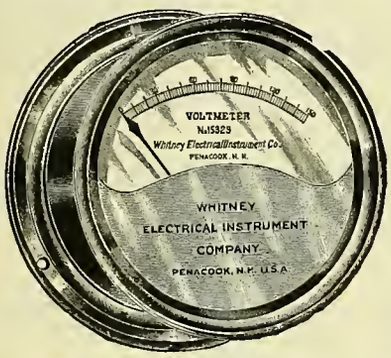
ELECTRA CARBONS

"TRADE MARK"

HIGHEST GRADE NUERNBERG

They give more light, whiter light and less dust than any other carbon. Their quality is uniform and always of the highest grade. Diameter and straightness perfect. Grand prize St. Louis World's Fair, 1904

HUGO REISINGER, SOLE IMPORTER 11 Broadway, NEW YORK



Diam. of body, 6 in., of base flange 7½ in.

THE **"I. P."** (ISOLATED PLANT) **TYPE DIRECT-CURRENT INSTRUMENTS**

Are winners. Scales are equally divided, indications are dead beat, high range ammeters have separate shunts and the cases are of heavy polished brass.

Prices are right, the list figure for the meter illustrated, for instance, being $16.50.

"Oneida" Galvanized Chain
EXPRESS PREPAID

Our flexible steel chain (American pattern) herewith illustrated will outwear cord, cable or rope many times over.

Give it a trial for raising and lowering Arc Lamps suspended from Mast Arms.

You will use no other attachment after making this test as "Oneida" Galvanized Chain is absolutely uniform in strength.

HEAVILY GALVANIZED!
RUST PROOF!

You need have no fear of your lamps falling to the street as happens so unexpectedly when strands of cable give way or a rope has rotted out.

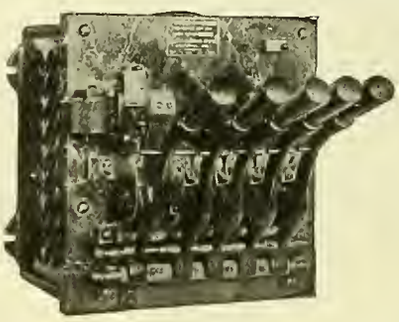
The more money you spend in advertising the more money you have.
The less money you spend in advertising the less money you have.

Multiple Switch Type Starter



This is the best type of starter to use on motors from 50 H. P. up because it is much more compact than the sliding type of starter, and in addition does not spark.

By an interlocking arrangement the switches cannot be thrown in except in their proper order, and in case of no voltage the same arrangement causes them to drop consecutively out of contact.

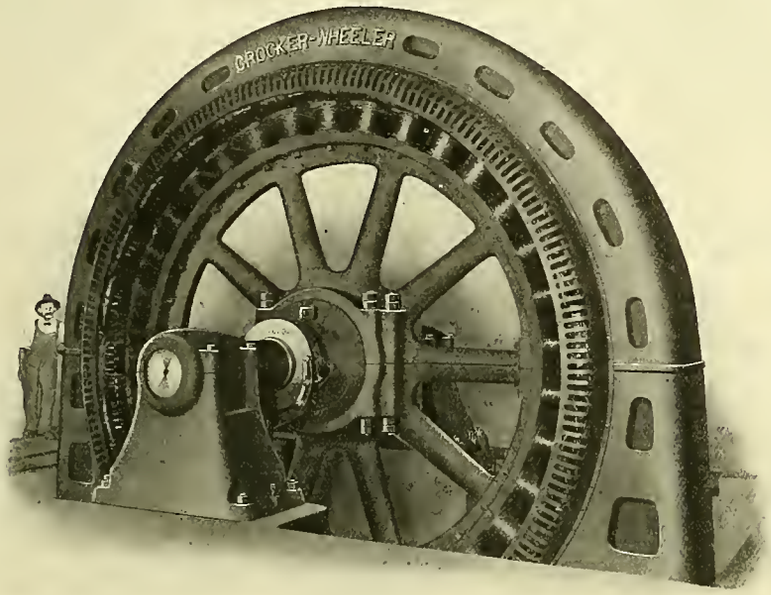
LARGEST GAS-ENGINE-DRIVEN ALTERNATOR EVER BUILT



This is one of the three 4,000 KVA A. C. generators driven by Snow gas engines, which will supply current for all the trolley lines in San Francisco and vicinity.

Crocker-Wheeler alternators, as has been proved in actual service, will run in parallel without the usual close attention. These 4,000 KVA machines are to run in parallel with waterwheel driven generators 100 miles distant.

8vo., Cloth, 482 pp. With Diagrams and Illustrations Price, $3.00

ELECTRIC LIGHTING

Vol. 1—The Generating Plant

By FRANCIS B. CROCKER, E. M., Ph. D.

Professor of Electrical Engineering in Columbia University. Past President of the American Institute of Electrical Engineers.

12mo., Cloth, 250 pp. Fully Illustrated Price, $2.50 Net

Electric Railways

Theoretically and Practically Treated.

Rolling Stock.

By SYDNEY W. ASHE, B. S.

Department of Electrical Engineering, Polytechnic Institute of Brooklyn. Late Instructor in Electric Traction for the Brooklyn Rapid Transit Co., Associate Member American Institute of Electrical Engineers.

AND

J. D. KEILEY

Assistant Electrical Engineer, N. Y. C. & H. R. R. R.

8vo., Cloth, 232 pp., Illustrated Price, $2.50 Net

Alternating Current Engineering Practically Treated

By E. B. RAYMOND

Testing Department General Electric Company

With 101 Diagrams and Figures

Third Edition, Corrected

Pocket Size, Flexible Leather, 1,000 Pages, with Innumerable Diagrams, Illustrations and Tables. Price, $5.00.

Electrical Engineer's Pocketbook

The most complete book of its kind ever published, treating of the latest and best practice in Electrical Engineering

By HORATIO A. FOSTER

Member Amer. Inst. E. E., Member Amer. Soc. M. E.

(WITH THE COLLABORATION OF EMINENT SPECIALISTS)

Fourth Edition Entirely Rewritten and Enlarged

8vo., Cloth, 675 pp. Price, $5.00 Net

The Electrical Transmission of Energy

A Manual for the Design of Electrical Circuits

By ARTHUR VAUGHAN ABBOTT, C. E.

Member American Institute of Electrical Engineers, Member American Institute of Mining Engineers, Member American Society of Civil Engineers, Member American Society of Mechanical Engineers, etc.

With 367 Figures, Ten Folding Diagrams and Sixteen Full-Page Engravings

2mo., Cloth, 159 pp., Illustrated Price, $1.50 Net

THE Electromagnet

By CHARLES R. UNDERHILL

Chief Electrical Engineer, Varley Duplex Magnet Co.

8vo., Cloth, 236 pp., Illustrated Price, $2.50 Net

Laboratory and Factory Tests In Electrical Engineering

By GEO. F. SEVER

Adjunct Professor of Electrical Engineering, Columbia University

AND

FITZHUGH TOWNSEND

Tutor in Electrical Engineering, Columbia University

WITH FIGURES, DIAGRAMS AND EXAMPLES

FROSTS, SLEETS, THAWS AND FREEZINGS ARE COMING!
Go Over Your Lines and Anchor the Weak Places With

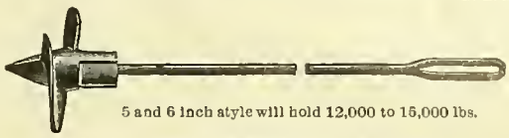
STOMBAUGH GUY ANCHORS

We give herewtth the experience of one company

PAWNEE TELEPHONE COMPANY,
PAWNEE CITY, NEB., July 1, 1904.

Gentlemen:—We are using your anchors right along (to save burial expenses) and find them very efficient. The mistake people are apt to make is too small a Guy for the work it is to do. We have had two five-inch anchors holding a heavy span of 20 wires ½ mile long, and anchors were placed only 5 feet from base of 25 foot pole. When all wires were loaded with sleet, the seven strand guys attached to anchors stretched and let pole over some, but anchors seemed to be as permanent as ever. We find they save us more money in country construction than anything we can use.

Yours truly,
PAWNEE TELEPHONE COMPANY,
G. E. Becker.



5 and 6 inch atyle will hold 12,000 to 15,000 lbs.

DOLLARS OFTEN ROLL UP HILL

Without a Green Fuel Economizer about $350 out of $1,000 spent for coal go rolling out the chimney. You can easily stop 40% of the money that now goes up in smoke by placing an Economizer in your boiler plant. It will at the same time increase the capacity of the boilers 20 to 40% and precipitate impurities in the feed water. Send for BOOK "WE," containing results of tests by well-known engineers, and the names of thousands of promin-nt users of this device. Ask also for our book on Fans for Mechanical Draft and other purposes.

Why Not Use the Best

AND THE ONLY GENUINE

Wrigley Patented Steel Toggle Bolt

with double flange sides and rigid back for securing brackets and fixtures to hollow tiling, marble slabs and steel ceilings. All other Toggle Bolts pivoted like cuts are infringements. The Trunnion Nut Toggle Bolt has a finished brass cap nut on the end. Hex. for wrench or round for screwdriver, plain or plated, and can be taken off after the bolt has been inserted, to place on the fixture. The bolt screws through the toggle plate the full length. Used for finished work, such as Telephones, Electric Fixtures and Marble Slabs. In ordering, mention if Trunnion Nut with Cap Nut or the plain Toggle Bolt is wanted.

PREDOMINATES IN 27 States

"IT gives me great pleasure to state, that for 'Gitthereitiveness' your periodical certainly is a winner. As you perhaps are aware, the company I travel for, advertises in all the electrical papers, and it has been a question in my mind whether they reached every central station, as their advertising manager would have our company believe. So, for one year I have kept account of the electrical papers and periodicals subscribed for and received by the manager or superintendent of electric light companies in twenty-seven states, (which has been my territory), and in summing it up, I find that your periodical predominates, three to one. I do not get in many telephone plants, but when I do, I invariably find the 'Western Electrician' staring me in the face."

The letter from which the above is taken, is dated May 8, 1905, and is on file in this office.

WANTED, FOR SALE *and similar* **WANT COLUMN** *advertisements (50 words or less), $1.50 an insertion; additional words 3c each.*
POSITION WANTED *advertisements (50 words or less), $1.00 an insertion; additional words 2c each.*

POSITION WANTED.

Technical graduate in applied electricity; age 23; desires position as attendant in power station, construction work, or with manufacturing company. Graduated last spring desires opportunity with a good company; good habits; A1 references. Address Box 543, care of Western Electrician, 510 Marquette Building, Chicago.

FOR SALE

Ten-horsepower Form G, type C. E. General Electric motor. Compound wound and arranged with R-43 controller and resistances for variable speeds. Motor has been used but little and is in excellent condition. Cheap for cash. The News, Newburgh, N. Y.

FOR SALE

Electric light plant in a No. 1 good town of 2,500. Located on main line of the C., B. & Q. R. R., in southwestern Iowa. Plant completely overhauled two years ago. New machinery, new Corliss engine, 20x42, 120 kilowatt and 30 kilowatt Westinghouse generators. Over 5,000 lights wired up. Good city street light contract and motor load. Day and night service. Coal in bins $1.74 per ton. We run retail coal yard in connection with plant. Good reasons for selling. Address box 541, care of Western Electrician, 510 Marquette Building, Chicago.

Second-Hand Machinery

1 24x18 Ideal Automatic Engine.
2 66-in. x 20-ft. Return Tubular Boilers built for 130 lbs. working pressure.
The above is all in first-class operating condition and is offered subject to prior sale.

Springfield Light, Heat & Power Company
Springfield, Ill.

Corliss Engines for Sale

One heavy duty Reynolds Corliss 350 horse power 22x48, 80 revolutions.

One heavy duty Reynolds Corliss 175 horse power 14x36, 100 revolutions.

One Sioux City Corliss 350 horse power (24x48) 75 revolutions.

The above engines are in absolutely first-class condition, the Reynolds engine having been entirely overhauled, and are suitable for 150 lbs. steam pressure; and the Sioux City engine was used for operating a commercial lighting station and is suitable for 100 lbs. steam pressure; also have one 150 Kilowatt and one 250 Kilowatt 500 volt generators, belts, etc. Reynolds engines are in daily use but can be delivered Feb. 1st, 1906. Sioux City can be delivered at once. Prices very reasonable. Address

Brice Gas & Electric Company,
Mason City, Iowa

DEPARTMENT OF THE INTERIOR. Washington, D. C., October 25, 1905. Sealed proposals will be received at the office of the Engineer, United States Reclamation Service, Billings, Montana, until 3 o'clock p. m., December 15, 1905, for installing a telephone system having eight or more telephone stations and 22 miles or more of pole line. Particulars may be obtained by application to the Chief Engineer of the Reclamation Service, United States Geological Survey, Washington, D. C., or to Robert S. Stockton, Engineer, Huntley, Montana. E. A. Hitchcock, Secretary.

Talking Points for

THE FOUR-TRACK NEWS

Which Explain Its Emphatic Success

Here are a few reasons why you want THE FOUR-TRACK NEWS on the reading table in your home. Look them over, think them over—then send for a sample copy and see if you don't think THE FOUR-TRACK NEWS is worth $1.00 a year to yourself and your family.

Its scope is confined to no geographical section; the world is its field.
It instructs.
It entertains.
It's different.
It is a universal favorite.
It is always and forever up-to-date.
It is a great help to students in history classes.
There is much in every issue of educational value to every reader.
It is entertaining to the father and mother as well as to the children.
It is eloquent with bright, brief, valuable articles and superb pictures.

Subscriptions, $1.00 a Year; Foreign Countries, $1.50; at News-stands, 10 Cents a Copy.

A sample copy and our special terms to agents will cost you nothing. Send your address and two references to GEORGE H. DANIELS, Publisher, Room No. 119A, 7 East 42d St., New York.

TELEPHONE SECURITIES IN GOOD DEMAND ON THE LOCAL STOCK EXGHANGE

Installation of the New System Has Greatly Stimulated Interest in the Company.

Caleb L. McKee & Co. say—"Columbus Citizens' Telephone preferred is in good demand at 103½, while nothing was offered below 105¼, and it seems quite firm at the latter figure. The installation of the new system has materially stimulated interest in this security and at the same time has had the effect of tightening it up to a considerable extent, as sellers are very scarce.

"Columbus Railway common is call

Our automatic System;— always does it,— strengthens the securities and keeps them strong because there's value back of them; It will do the same for yours.

OUR AUTOMATIC SYSTEM ADOPTED IN THE FOLLOWING CITIES:

Chicago, Ill.	Sioux City, Ia.	Van Wert, O.	Auburn, Me.	Woodstock, N. B	Hastings, Neb.

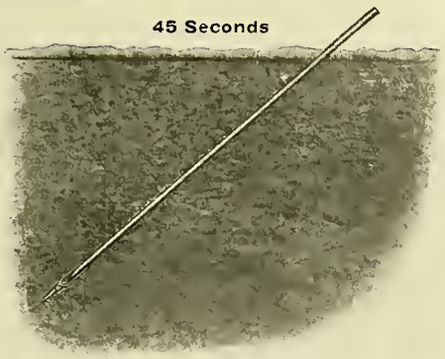
Of Interest to USERS OF ANCHORS

45 Seconds



AND

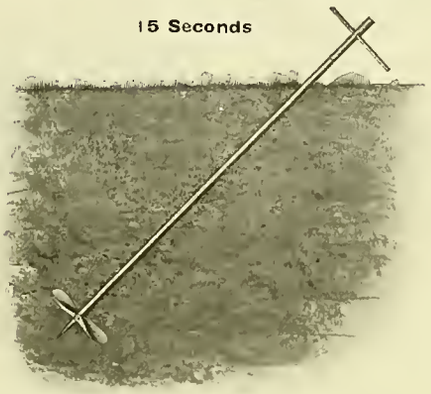
The D. & T. Anchor

For all classes of pole or post guying. The easiest to set, the hardest to pull up.

No Installing Expense

TWIST

15 Seconds



The only anchor that can be installed in rocky soil.
The only anchor that **PULLS ON SOLID EARTH.**
The only anchor that does not give when strain is put on.
The D. & T. Anchor is set rigid by twisting, so there is no "give" under the strain.
We rate the anchor not on what it takes to pull it out, but on what it holds **without moving an ⅛ inch** from where it is set.
Tried, tested and adopted in 18 states and 4 Canadian provinces; also in the Phillipines.
Can be obtained from all first-class supply houses.

Write for Souvenir Model and Latest Circular

ELECTRICITY SIMPLIFIED

By PROF. T. O'CONOR SLOANE

158 Pages. Fully Illustrated. PRICE, $1.00

Contents

CHAPTER I. The Ether; Electricity; Force and Energy; Mass and Weight. CHAPTER II. The Electric Charge; Potential; The Dielectric; Positive and Negative Electricity; Contact Action; Electrostatic Lines of Force; The Leyden Jar. CHAPTER III. The Electric Current and Circuit; Relations of Electromotive Force, Resistance and Current; Velocity of Electricity. CHAPTER IV. Fundamental Units and the Relations Between Electrostatic and Electromagnetic Units; Practical Units; the Volt, Ohm, Coulomb and Ampere; Electric Force, Work and Energy; Chemistry of the Current. CHAPTER V. The Magnetic Circuit and Electromagnetic Lines of Force; Magnet and Ampere's Theory. CHAPTER VI. Electromagnetic Induction and Action of Currents Upon Each Other; The Induction Coil and Its Application. CHAPTER VII. The Galvanic Battery; The Electrotype and the Locus of its Potential Difference; Polarization and Local Action; Different Examples of Batteries; The Arrangement and Action of Batteries; Storage Batteries. CHAPTER VIII. Dynamos; Motors; Transmission of Power. CHAPTER IX. The Telephone and Microphone; Electric Lighting; The Electric Telegraph; The Dangers of Electricity; Conditions for receiving a Fatal Shock.

Sixteenth Edition. Just Published.

ARITHMETIC of ELECTRICITY

By PROF. T. O'CONOR SLOANE

It Can't Be Beat—The Guthrie Flasher

A SIGN FLASHER WITHOUT A MOTOR

Agents Wanted

A FEW ADVANTAGES OF THIS FLASHER OVER ALL OTHERS:

First.—The Price is lower.
Second.—It has fewer parts and is therefore the simplest flasher on the market.
Third.—It has no motor to cause trouble and consume current.
Fourth.—It costs nothing to operate this flasher.
Fifth.—It only occupies a space of 5 x 8 inches.
Sixth.—It can be regulated to flash any signs or show window lights in any manner desired.

Any combination of lights, without motor or cylinder.
Simplest and best on the market.
Works on any current.
The disadvantage of a flasher was the motor question.
We have overcome this and are putting out an article that meets a long felt want.

A LAMP

LOOK FOR THE LICENSE LABEL

THAT WILL GIVE YOU THE FULL VALUE OF YOUR MONEY IN CANDLE-POWER EFFICIENCY AND LIFE.

THE COLUMBIA

Columbia Lamps are manufactured under license to use the Chemical Exhaust Process of exhausting lamps. This process is vitally necessary in the production of the highest quality of lamp.

OKONITE IT NEVER DISAPPOINTS

Central Electric Company,

GENERAL SALES AGENTS

207-209-211 EAST JACKSON BOULEVARD, CHICAGO

OKONITE IT NEVER DISAPPOINTS

$10,000.00

will be spent in advertising the

MADISON SQUARE GARDEN ELECTRICAL SHOW

to be held in Madison Square Garden, New York from December 12th to 23d inclusive, 1905

It will be advertised as no show held at the Garden has ever been advertised.

It will be a great popular success.

In order that the show may be a real stimulus to the electrical industry the management is anxious to have as many representative firms as possible among its exhibitors.

The list of exhibitors is already a long one, and the desirable space is being rapidly secured. Application should be made promptly to

EXPOSITION COMPANY OF AMERICA

26 Cortlandt Street, N. Y.

Geo. F. Sever, *Director of Exhibits.*

"Oneida" Galvanized Chain
EXPRESS PREPAID

Our flexible steel chain (American pattern) herewith illustrated will outwear cord, cable or rope many times over.

Give it a trial for raising and lowering Arc Lamps suspended from Mast Arms.

You will use no other attachment after making this test as "Oneida" Galvanized Chain is absolutely uniform in strength.

HEAVILY GALVANIZED!
RUST PROOF!

You need have no fear of your lamps falling to the street as happens so unexpectedly when strands of cable give way or a rope has rotted out.

Electrical Testing
By
Norman H. Schneider
Chief Constructing Electrical Engineer
White City, Collinswood, O.

A book for every man who is interested in Electrical work.

You Should Have This Book
BECAUSE:

It is written for the practical man.
It gives the very latest information.
It treats of modern instruments universally adopted.
It contains a complete chapter on testing with the Voltmeter not explained in any other book.
The formulas given are fully explained and worked out in simple arithmetic.
The tests given are such as occur every day in the engine room, power house, telephone exchange, cable laying and constructors' work in the field.
It is written by a man who has had extensive practical experience in all branches of electrical testing.
It is a well made book and sold at a reasonable price.

210 pages, over one hundred illustrations and tables, handsome limp leather, postpaid. **Price, $2.00**

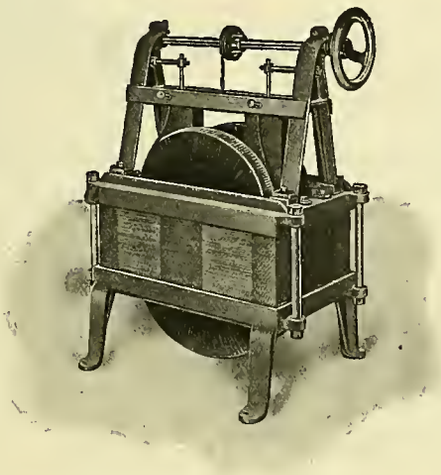
A Transformer For Thawing Pipes



Pipe Thawing Transformer without fuses, covers swiches or truck

LIGHT—NO OIL—COMPACT

Easy to handle and operate

Self-contained, no energy wasted in dead resistance. Supplied in sizes of 10-20 and 30 KW.

Readily adjusted over a wide range of secondary current and voltage overload 100%

Can be furnished with or without fuses, covers, switches or truck

(759)

Principal Office: SCHENECTADY, N. Y. Chicago Office, Monadnock Blk. Sales Offices, in All Large Cities.

THE MAN WHO IS GETTING THE BUSINESS, the contracts, the money and the reputation in all branches of life today, is the man who is ever on the alert to improve his work.

If he is an electrical contractor, it is ten to one he is using our DOUBLE POLE sockets in all his work. The DOUBLE POLE feature is worthy of note; so is the contact shell of copper instead of brass or plated stuff.

The general excellence of "P & S" sockets lies in these features backed by skillful manufacture and the use of only the finest materials. Be progressive; order "P & S" sockets—"THE ONE WITH THE DOUBLE POLE."

NEW AUTOMATIC
Cooper Hewitt Mercury Vapor
LAMPS

The new automatic type of Cooper Hewitt Lamps starts with the closing of the switch. A magnet on the holder or bracket tilts the tube automatically, and lights the lamp.

The lamp is complete in itself and as readily installed as an arc lamp.

Automatic Type H Lamp

"The Light To Work By"
Photograph taken in basement by the light of Cooper Hewitt Lamps only.

The Cooper Hewitt Lamp takes just half the current that an arc requires and gives more and a better quality of light for shops and mills.

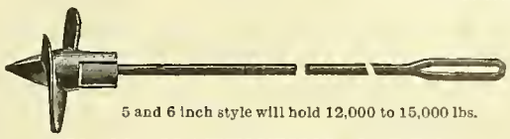
FROSTS, SLEETS, THAWS AND FREEZINGS ARE COMING!
Go Over Your Lines and Anchor the Weak Places With
STOMBAUGH GUY ANCHORS
We give herewith the experience of one company

PAWNEE TELEPHONE COMPANY,
PAWNEE CITY, NEB., July 1, 1904.

Gentlemen:—We are using your anchors right along (to save burial expenses) and find them very efficient. The mistake people are apt to make is too small a Guy for the work it is to do. We have had two five-inch anchors holding a heavy span of 20 wires ½ mile long, and anchors were placed only 6 feet from base of 25 foot pole. When all wires were loaded with sleet, the seven strand guys attached to anchors stretched and let pole over some, but anchors seemed to be as permanent as ever. We find they save us more money in country construction than anything we can use.

Yours truly,
PAWNEE TELEPHONE COMPANY,
G. E. Becker.



5 and 6 inch style will hold 12,000 to 15,000 lbs.

"IT gives me great pleasure to state, that for 'Gitthereitiveness' your periodical certaioly is a wioner. As you perhaps are aware, the company I travel for, advertises in all the electrical papers, and it has been a question in my miod whether they reached every ceotral station, as their advertisiog manager would have our company believe. So, for one year I have kept accouot of the electrical papers and periodicals subscribed for and received hy the maoager or superioteodent of electric light companies in twenty-seveo states, (which has beeo my territory), and in summiog it up, I find that your periodical predominates, three to one. I do aot get in many telephoae plants, but when I do, I invariably find the 'Westera Electriciao' staring me io the face."

The letter from which the above is takeo, is dated May 8, 1905, and is on file io this office.

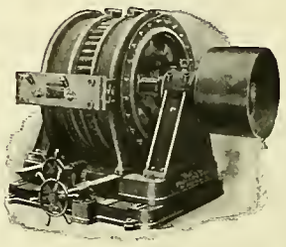
FISHER BUILDING CHICAGO — 95 LIBERTY STREET NEW YORK

Merely a Mass of Metal

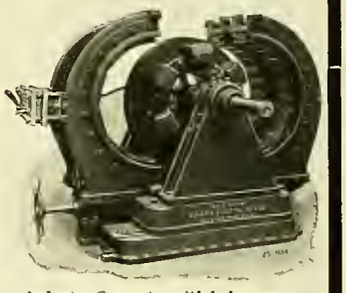


THE INDUCTOR GENERATOR for simplicity is comparable to the Inductor Motor. There are no brushes, collectors, nor moving wires of any kind.

The field is stationary, the armature is stationary—the only moving part being the "Inductor,"

Which is Merely a Mass of Metal

Wear and tear is thereby reduced to the simplest known mechanical movement, a shaft revolving in bearings, and, aside from lubrication, the attention required is negligible.



Inductor Generator with halves open for inspection.

If it were possible to derive electrical energy from a mass of metal by merely connecting wires thereto, such would be the ideal generator.

In the Inductor Generator the elimination of all mechanical complications makes this type approximate the ideal more closely than any other electrical generating apparatus extant.

DIXON'S GRAPHITE PIPE JOINT COMPOUND.
PLEASE MENTION THIS PUBLICATION.
JOSEPH DIXON CRUCIBLE CO., Jersey City, N. J.

FIBRE-GRAPHITE COMMUTATOR BRUSH
SELF-LUBRICATING
NOISELESS

There's No Friction
with the Fibre-Graphite Commutator Brush
Being 90 per cent. pure graphite, it insures low resistance, no sparking under a varying load, and longer wear. There is no greasing required. The Fibre-Graphite is therefore the most economic brush on the market. Send for price list.
HOLMES FIBRE-GRAPHITE MFG. CO.

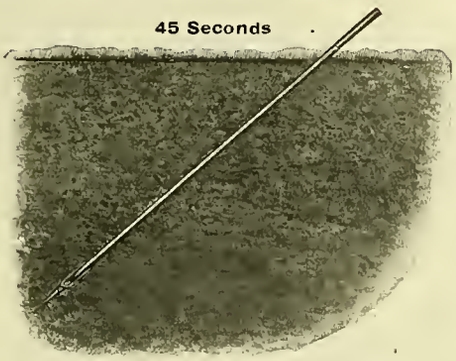
DRIVE

Of Interest to USERS OF ANCHORS

45 Seconds



AND

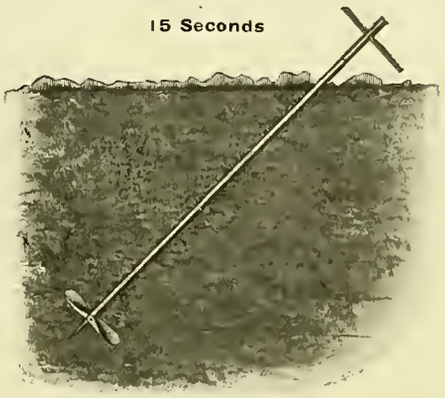
The D. & T. Anchor

For all classes of pole or post guying. The easiest to set, the hardest to pull up.

No Installing Expense

TWIST

15 Seconds



The only anchor that can be installed in rocky soil.
The only anchor that **PULLS ON SOLID EARTH.**
The only anchor that does not give when strain is put on.
The D. & T. Anchor is set rigid by twisting, so there is no "give" under the strain.
We rate the anchor not on what it takes to pull it out, but on what it holds **without moving an 1/8 inch** from where it is set.
Tried, tested and adopted in 18 states and 4 Canadian provinces; also in the Phillipines.
Can be obtained from all first-class supply houses.

Write for Souvenir Model and Latest Circular

Direct Current Railway Motor Repair Parts

Fort Wayne Electric Works

Four Reasons Why You Should Install one of our Induction Motors

Low Starting Current

The good features of the old motors have been retained in the new design.

Flexibility

Each motor is so designed as to be operated upon either floor, wall or ceiling.

Type M, Form C Motor

Cool Operation

The open design of the stator, rotor and frame guarantees a constant circulation of cool air.

Long Life

Nothing to wear but the bearings. In the larger motors adjustments can be made to compensate for even that small wear.

NOTE OUR OFFER

In order to introduce the **TWO BALLS ADJUSTER** we make you the following proposition:

Send us the names of **flourishing** institutions and factories using 50 or more drop lights and we will express them, prepaid, an adjuster FREE, writing them that you will call to install it on two weeks' trial and that you will figure with them on an equipment throughout. Your only expense will be your time, lamp cord and possibly rosette and socket, if the adjuster is not hung on an old light. You will get this material back if they do not buy. You will find, however, that instead of letting you take the adjuster down they will instruct you to install adjusters on all their drop lights. One good installation means that you will receive orders from all over town.

While this is your busy season, by accepting this proposition you can add to your profits.

Write a few select names on the edge of this advertisement and send to us immediately.

The Two Balls Adjuster

for incandescent lamps enables you to place the light JUST WHERE YOU WANT IT. It is a simple but perfect device. Invaluable in factories, offices or wherever electricity is used for lighting. It is automatic and stays where you put it. No springs; nothing to get out of order. You can add to your profits by pushing it. Write us for new printed matter.

STANDARD OF THE WORLD

ELECTRA CARBONS

·TRADE MARK·

HIGHEST GRADE NUERNBERG

They give more light, whiter light and less dust than any other carbon. Their quality is uniform and always of the highest grade. Diameter and straightness perfect. Grand prize St. Louis World's Fair, 1904

HUGO REISINGER, SOLE IMPORTER 11 Broadway, NEW YORK

FREE to CENTRAL STATIONS

50 FEET

"ONEIDA" GALVANIZED CHAIN

EXPRESS PREPAID

Our flexible steel chain (American pattern) herewith illustrated will outwear cord, cable or rope many times over. Give it a trial for raising and lowering Arc Lamps suspended from Mast Arms.

You will use no other attachment after making this test as "Oneida" Galvanized Chain is absolutely uniform in strength.

HEAVILY GALVANIZED! RUST PROOF!

You need have no fear of your lamps falling to the street as happens so unexpectedly when strands of cable give way or a rope has rotted out.

MANUFACTURED BY

Oneida Community, Ltd.

ONEIDA, NEW YORK.

Branch Factory, Niagara Falls, Ont. Canada

Address all inquiries to Sales Dept.

A LAMP

LOOK FOR THE LICENSE LABEL

THAT WILL GIVE YOU THE FULL VALUE OF YOUR MONEY IN CANDLE-POWER EFFICIENCY AND LIFE.

THE COLUMBIA

Columbia Lamps are manufactured under license to use the Chemical Exhaust Process of exhausting lamps. This process is vitally necessary in the production of the highest quality of lamp.

Inner Globe Wisdom

Longfellow could take a worthless sheet of paper, write a poem on it, and make it worth sixty thousand dollars, —"THAT IS GENIUS."

Rockefeller can sign his name to a piece of paper and make it worth millions,—"THAT IS CAPITAL."

Uncle Sam can take an ounce of gold, stamp an eagle upon it, and make it worth $20.00,—"THAT IS MONEY."

A mechanic can take material worth $5.00 and make it into an article worth $50.00,—"THAT IS SKILL."

Merchants buy articles for eighty-seven cents and sell them for a dollar,—"THAT IS BUSINESS."

A woman can purchase a sixty-nine-cent hat, but prefers one that costs $27.00; her husband says,—"THAT IS FOOLISHNESS."

SOME INNER GLOBE MANUFACTURERS take the poorest quality of glass, make it into a globe and try to sell it at a high price,—"THAT IS IMPUDENCE."

Other manufacturers sell you a globe full of water spots, unevenly ground, imperfectly tempered, and other defects that cause the globe to crack, get soft or blacken when put into service, — "THAT IS FRAUD."

Those who have had experience with various makes of INNER GLOBES fall back on the old reliable "PHŒNIX," the globe of quality, — "THAT IS GOOD JUDGMENT."

Phœnix Globes are heat-resisting, non-blackening, non-cracking. They have all the good qualities, nothing is lacking.

Edison Ready-to-Use Electric Decorative Lighting Outfits Are Sure Sellers

Because no other method decorates the Christmas tree so quickly, neatly and beautifully. They are in demand at all seasons for the adornment of the home or for use on a larger scale at public entertainments.

The Edison outfit provides the safest means for the illumination of all kinds of decorations. It is durable because made in a substantial manner from the best materials.

The outfits are made in the following sizes:

No. 1.—8-light outfit, including two extra lamps.

No. 2—16-light outfit, including three extra lamps.

No. 3.—24-light outfit, including four extra lamps.

No. 4.—32-light outfit, including four extra lamps.

Clear, green and red lamps are supplied.

Go Over Your Lines and Anchor the Weak Places With

STOMBAUGH GUY ANCHORS

We give herewith the experience of one company

OFFICE OF NORTHFIELD TELEPHONE COMPANY,
NORTHFIELD, VT., Dec. 5, 1904

Gentlemen:—Yours of Nov. 30th received and contents noted. We have used your Anchors and have no doubt that they will prove satisfactory.

On the night of Nov. 20th this section was visited by the most severe storm we have had for years. On our lines running East and West there was from one to two inches of ice. Those poles guyed by the Stombaugh Guy Anchor are still standing, and we think that this is as good a test of their worth as we could have had.

Very truly yours,
NORTHFIELD TELEPHONE COMPANY,
H. D. Chamberlain, Superintendent.

20 to 40 per cent of the heat of the fuel escapes in the flue gases if your boiler plant is not equipped with a

Green Fuel Economizer

Place a thermometer in the flue leading from the boiler and you will find a temperature of 500° to 600° F., according to the conditions of your plant. About half of this heat could be saved by an Economizer, which at the same time would largely increase the capacity of the boiler plant, take care of load fluctuations, decrease the amount of black smoke and prevent most of the impurities of the feed water from entering the boiler. Write for our BOOK "WB" on boiler economy, and ask also for our Catalog of Fans for Mechanical Draft and other purposes.

PREDOMINATES
IN
27 States

"IT gives me great pleasure to state, that for 'Gitthereitiveness' your periodical certainly is a winner. As you perhaps are aware, the company I travel for, advertises in all the electrical papers, and it has been a question in my mind whether they reached every central station, as their advertising manager would have our company believe. So, for one year I have kept account of the electrical papers and periodicals subscribed for and received by the manager or superintendent of electric light companies in twenty-seven states, (which has been my territory), and in summing it up, I find that your periodical predominates, three to one. I do not get in many telephone plants, but when I do, I invariably find the 'Western Electrician' staring me in the face."

The letter from which the above is taken, is dated May 8, 1905, and is on file in this office.

WANTED, FOR SALE *and similar* **WANT COLUMN** *advertisements (50 words or less), $1.50 an insertion; additional words 3c each.* **POSITION WANTED** *advertisements (50 words or less), $1.00 an insertion; additional words 2c each.*

POSITION WANTED.

As engineer and electrician in some small plant. Ten years' experience. Familiar with all branches of the business. Married, 35 years of age, and can furnish recommendations as to ability and character. Address box 545, care of Western Electrician, 510 Marquette Bldg., Chicago.

WANTED.

Most respectable European concern (Electric Company) desires to communicate with inventors and manufacturers for exclusive sale of new article, technical line preferred; representative at present in the States. Write in strict confidence, stating particulars, to Box 546, care of Western Electrician, 510 Marquette Building, Chicago.

WANTED

Second engineer for an eight-hour watch, turbine station. Applicant must be a good, practical, all-around man; level-headed, capable of good judgment. State experience and references. Prefer a man who has been in light and power station. Address Box 544, care of Western Electrician, 510 Marquette Building, Chicago.

FOR SALE

Magnet Wire Machines; inquire
NORTHERN WIRE & CABLE CO.
Milwaukee, Wis.

FOR SALE

Electric light plant in a No. 1 good town of 2,500. Located on main line of the C., B. & Q. R. R., in southwestern Iowa. Plant completely overhauled two years ago. New machinery, new Corliss engine, 20x42, 120 kilowatt and 30 kilowatt Westinghouse generators. Over 5,000 lights wired up. Good city street light contract and motor load. Day and night service. Coal in bins $1.74 per ton. We run retail coal yard in connection with plant. Good reasons for selling. Address box 541, care of Western Electrician, 510 Marquette Building, Chicago.

TELEPHONE ENGINEERS.

Engineers of experience with telephone manufacturers will gain information to their interest by writing to Box 1732 General Post Office, New York City, in regard to business openings. State nature of present work and name of employer as well as age, experience and salary expected.

DEPARTMENT OF THE INTERIOR, Washington, D. C., October 25, 1905. Sealed proposals will be received at the office of the Engineer, United States Reclamation Service, Billings, Montana, until 3 o'clock p. m., December 15, 1905, for installing a telephone system having eight or more telephone stations and 22 miles or more of pole line. Particulars may be obtained by application to the Chief Engineer of the Reclamation Service, United States Geological Survey, Washington, D. C., or to Robert S. Stockton, Engineer, Huntley, Montana. E. A. Hitchcock, Secretary.

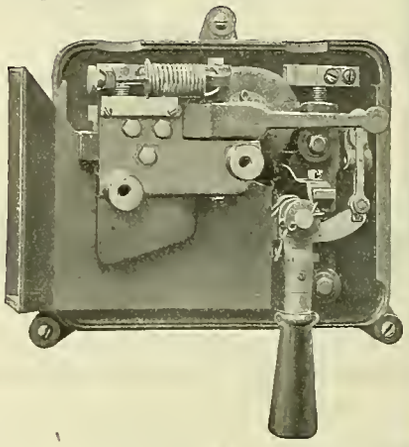
A New Westinghouse
Automatic Railway Type Circuit Breaker

Dimensions: { Length 11 inches
Breadth 9 inches
Depth 6 inches

Capacity 60 to 200 Amperes

The simplest and most modern design now on the market



The arc is broken in a powerful magnetic field which effectually opens the circuit under the most severe conditions of short circuit, and reduces damage to the arcing contacts to a minimum. The contacts where the arc occurs when the circuit is opened, are surrounded by a shield of insulating and arc resisting material, which prevents the arc from being communicated to any part of the breaker or case.

Westinghouse Electric & Mfg. Co.

Sales Offices in All Large Cities. Pittsburg, Pa.

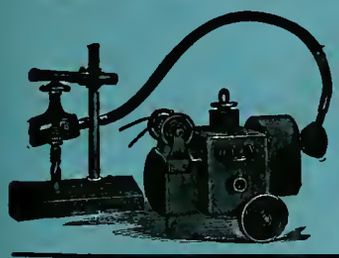
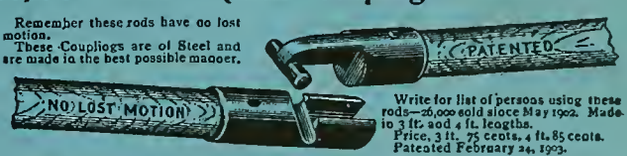
FLASHERS
in your city. Quick sales, big profits. Write today for RECO folder and pointers on Electric Signs
REYNOLDS ELECTRIC FLASHER MFG. CO
221 Fifth Ave., CHICAGO.



ESTABLISHED 1875.
COMBINATION OF
Stow Flexible Shaft
—AND—
MULTI-SPEED MOTOR
Practically dust and water proof. For Portable Drilling, Tapping, Reaming, Emery Grinding, etc. Write for Catalogue and Prices.
STOW MFG. CO., Binghamton, N. Y.
Gen'l European Agents, Selig, Sonnenthal & Co., 85 Queen Victoria Street, London, England

Cope's Patent Quick Coupling Conduit Rod
Remember these rods have no lost motion. These Couplings are of Steel and are made in the best possible manner.



Write for list of persons using these rods—26,000 sold since May 1902. Made in 3 ft. and 4 ft. lengths. Price, 3 ft. 75 cents, 4 ft. 85 cents. Patented February 24, 1903.
T. J. COPE
3244 North Fifteenth Street PHILADELPHIA, PA.

"Flexduct" is that high standard required in all high-class work. It is very flexible, a high insulation and indestructible

FLEXIBLE CONDUIT

"Flexduct" the National Code Standard. It does not deteriorate, always usable to highest degree

OSBURN FLEXIBLE CONDUIT COMPANY,
NEW YORK CHICAGO SAN FRANCISCO

WESTON ELECTRICAL INSTRUMENT CO.,
Main Office and Works, Waverly Park, NEWARK, N. J.

Illuminated Dial Station Instruments.
These instruments are constructed upon the same general principle as our regular Standard Portable Direct Current Voltmeters and Ammeters, but are much larger, and the working parts are inclosed in a neatly designed, dust-proof cast-iron case which effectively shields the instruments from disturbing influences of external magnetic fields.
PARIS, FRANCE—E. H. Cadiot 12 Rue St. Georges.
BERLIN—European Weston Electrical Instrument Co., Ritterstrasse No. 88.

Weston Standard Illuminated Dial Potential Indicator, Style B. "Flush Type."

Weston Standard
Portable Direct Reading Voltmeters and Millivoltmeters. Ammeters and Millammeters, Wattmeters and Voltmeters, for Alternating and Direct Current Circuits.
Our portable instruments are recognized as standards throughout the civilized world.
Our Semi-Portable Laboratory Standard Voltmeters and Ammeters are still better.
They are the most reliable, absolute standards for Laboratory use.
LONDON BRANCH—Audrey House, Ely Place, Holborn.

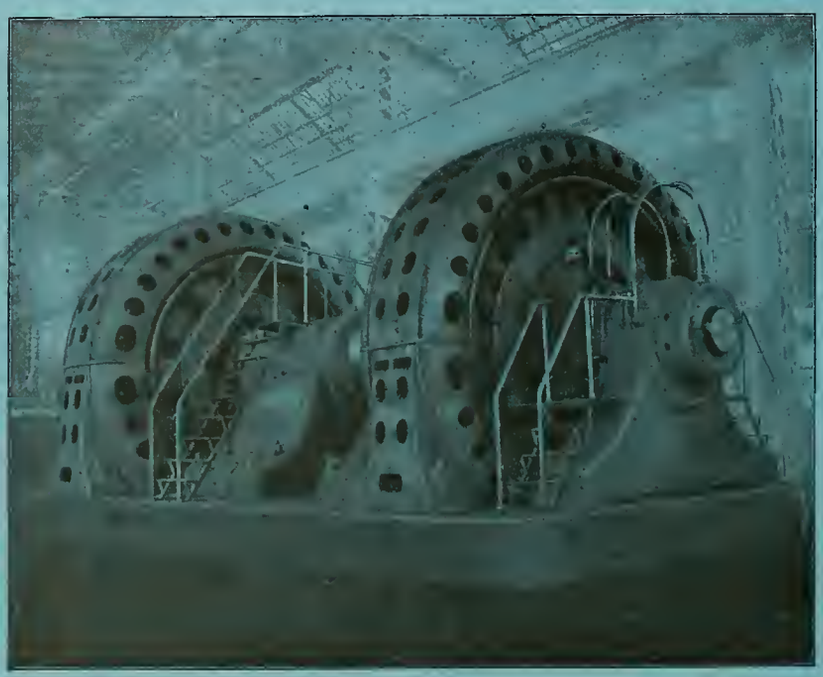
MILWAUKEE WIS U S A

Bullock D-C and A-C Apparatus

Of any Desired Capacity

Motor-Generator Sets for All Purposes



Bullock 8,000-horsepower Frequency Changer for Shawinigan Water and Power Co., Shawinigan, Quebec.

This Frequency Changer consists of an 8,000-horsepower Generator—one of the largest ever built—and an 8,000-horsepower Synchronous Motor—the largest ever built—and was photographed at our works in test under full load conditions corresponding to 7,200 kw. on the generator.

Remarkable for concentrating an aggregate of 16,000-horsepower in an exceedingly small floor space.

HABIRSHAW

Complete stock of all sizes constantly on hand and for sale at lowest market prices by

CHICAGO EDISON COMPANY,

WRITE FOR PRICES. 139 ADAMS STREET, CHICAGO.

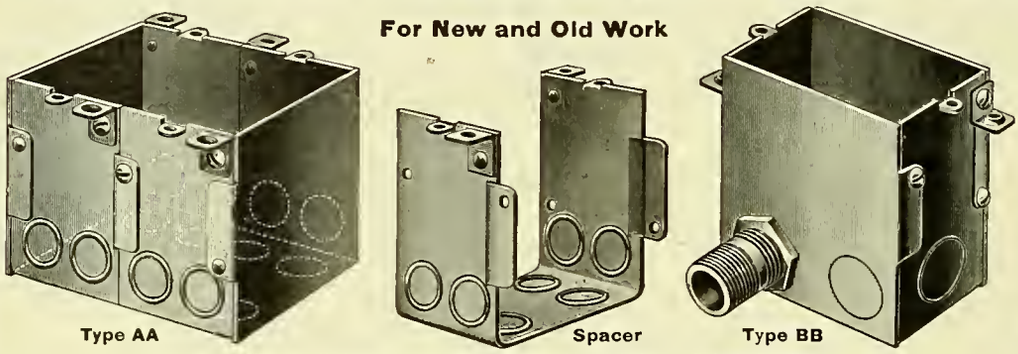
We Will Build You a Machine to Do It  = PROFIT

We don't ask you what "*It*" is, but whatever you make that necessitates the forming and assembling of small parts can be handled entirely by machinery, and we'll furnish the machine. We will design a machine for making *any* electrical specialty and do it for you on the "No Risk to You Basis." Send us a sample of what you make, and we will send you a proposition as to what we can make. You don't pay for the machine until it suits you. Here is a chance to kill competition. C. H. M'CIEHAN & CO., Designers and Mechanical Experts, 11 Broadway, New York.

NEW NEW NEW

'UNION' OUTLET COMBINATION SWITCH BOX

For New and Old Work



Type AA Spacer Type BB

Approved by the Underwriters National Electrical Association. (Patents Pending.)
Takes all Standard Switches and Receptacles

Designed whereby a **2-gang** box can be converted into any number of gangs by releasing the clamping screws and inserting "Spacers." These gangs are easily assembled with the aid of a screw-driver, and fit together snugly, making a perfect and solid gang box for any required number of switches.

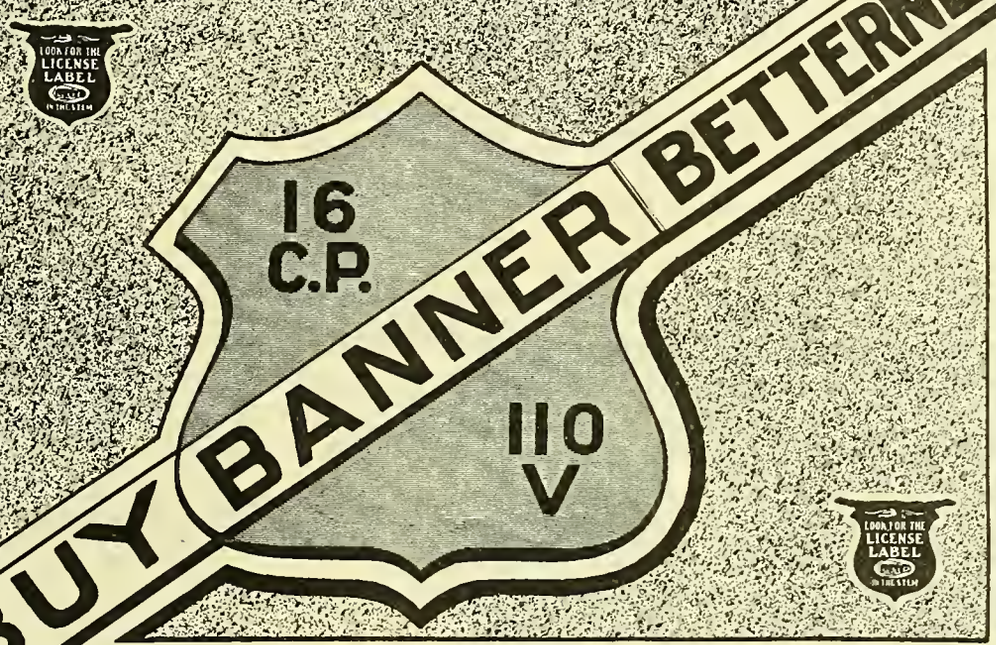
The Banner Label is the strongest guarantee of lamp excellence that you can get.

We don't mean that the label is what makes the lamp valuable; it was Banner Lamps that made the Banner Label famous.



The only way for you to find out to what extent our claims are supported by facts, is to buy Banner Lamps.

Order a trial lot. Test! Compare!

THE BANNER ELECTRIC CO.

YOUNGSTOWN, OHIO.

St. Marys Incandescent Lamp Company
VS.
THE LAMP TRUST

The spontaneous endorsement and substantial appreciation we are receiving from buyers of incandescent lamps in our efforts to give them a **"square deal"** is far beyond our expectations. The American people do resent monopolies, and, more than the monopolies, they resent the monopolistic methods. We are making for buyers

A WIDE OPEN LAMP MARKET

We are here with a hundred-thousand dollar Pennsylvania corporation, a great factory finely equipped with modern machinery, and the highest skilled men in lamp making—and it's to your interest, quite as much as to ours, for you to write us and

GET THE NON-TRUST PROPOSITION ON INCANDESCENT LAMPS

Send to us to-day. Tell us when you will be in the market and for what quantity of lamps, and at least be informed.

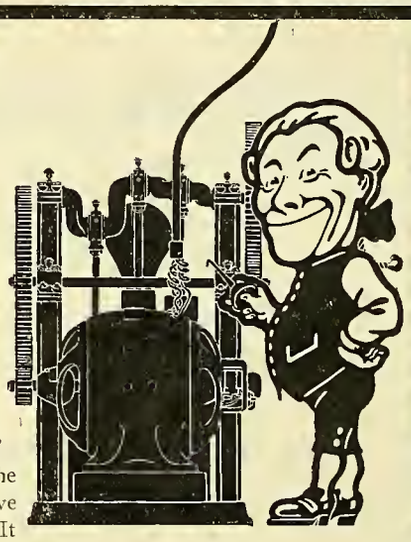
ELECTRICITY

For Little Things As Well As Big



A FEW SUGGESTIONS

The Edison Light is Not Expensive.

THE EDISON LIGHT is the cheapest of all artificial illuminants, including convenience, cleanliness and effectiveness. But even without these added considerations it is cheap enough for anyone.

The Edison service is available to the smallest as well as the largest user. So cheap is the service that it can be afforded in the smallest homes. In fact, here its advantages are more apparent than almost anywhere else. However small the rooms, or closely crowded, the atmosphere remains pure and unchanged.

Perhaps no greater blessing can be brought into any home than the Edison light. It would be a better Christmas present than many other gifts costing far more.

The Convenience of the Edison Service.

When speaking of home lighting one should not forget the convenience of the closet light which may be automatically connected or disconnected on opening or closing the door; or the porch light burning brilliantly in all kinds of weather.

Nothing so much as electric light adds to the attractive cheerfulness of the dining room or parlor, and then there is the convenient reading lamp at the head of the bed, or the hall light controlled individually from the head or foot of the stairs.

A writer in the November *Ladies' Home Journal* states that "burglars avoid an electrically lighted house," "that, other things being equal, a burglar will always pass a house lit by electricity."

A Christmas Suggestion.

The Christmas list for 1905 should contain some of the new electric heating devices. An electric hair curler, or handkerchief iron; or a heating pad (taking the place of the troublesome hot water bottle), or foot warmer; a coffee pot, cereal dish, chafing dish or any other of a hundred devices.

The smaller articles make convenient traveling companions, and in these days when electric light is to be found everywhere there are few places in which they cannot be used in the socket of an ordinary incandescent lamp.

Small Power for the Household.

The small motor operating an electric fan or a sewing machine costs very little to buy and insignificantly little to run from hour to hour. It brings great good at low cost.

Sanitary Labor-Saving Cleaning.

The convenient, efficient, cheap and, what is more important, thoroughly sanitary vacuum cleaning system, operated by an electric motor, should be known to every householder.

The same system may be used for cleaning clothes. In connection with the Edison System this is one of the approaching solutions of the servant problem.

A Good Substitute for Sunlight.

The arc light for the brilliant illumination of large areas is the most satisfactory substitute for sunlight that has been found. Its extensive use by shopkeepers and others makes the streets wonderfully attractive at night.

Modern Publicity.

The electric sign is the most modern and effective of advertising methods. It illuminates the store-front and at the same time tells impressively the story desired to the passing public. Large signs in more exposed positions are seeable great distances. In no other way can so many people be reached in a manner so cheap and at the same time so effective.

It has been said that without the electric light—without the Edison System—New York City would be a fourth rate village. If Electric Power be included we are inclined to agree with this opinion.

Competition also exists between communities. Omitting the convenience, cleanliness, cheapness and all else the Edison System stands for, brilliant illumination of the streets, show windows and stores, creates an enormous volume of business. Imagine our great Opera House and the hundred playhouses of New York, without electric lights—these things make New York increasingly attractive and, in consequence, increasingly prosperous.

Electric Power for Any Purpose.

More than 100,000 horsepower in electric motors are supplied from the mains of The New York Edison Company. During October, 4,457 horsepower were contracted for.

There is no application of power that cannot be accomplished with an electric motor. Whether power is desired for the smallest sewing machine or the largest and fastest elevator; for the small or great printing press, or an electric pump; for a jeweler's lathe or the largest manufacturing establishment; a motor, large or small, directly attached to the machine which it operates is now available. With the Edison System behind it, 1 horsepower, 1,000 horsepower or 10,000 horsepower may be obtained with equal facility.

Any kind of information bearing upon these subjects can be obtained, quickly and without cost, by directing a note to the General Offices of

Go Over Your Lines and Anchor the Weak Places With

STOMBAUGH GUY ANCHORS

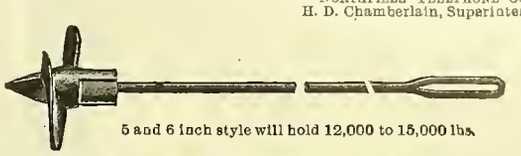
We give herewith the experience of one company

OFFICE OF NORTHFIELD TELEPHONE COMPANY,
NORTHFIELD, VT., Dec. 5, 1904.

Gentlemen:—Yours of Nov. 30th received and contents noted. We have used your Anchors and have no doubt that they will prove satisfactory.

On the night of Nov. 20th this section was visited by the most severe storm we have had for years. On our lines running East and West there was from one to two inches of ice. Those poles guyed by the Stombaugh Guy Anchor are still standing, and we think that this is as good a test of their worth as we could have had.

Very truly yours,
NORTHFIELD TELEPHONE COMPANY,
H. D. Chamberlain, Superintendent.



5 and 6 inch style will hold 12,000 to 15,000 lbs.

New York: 31 Union Sq. Chicago: 304 Wabash Ave.

PREDOMINATES IN 27 States

"IT gives me great pleasure to state, that for 'Gitthereitiveness' your periodical certainly is a winner. As you perhaps are aware, the company I travel for, advertises in all the electrical papers, and it has been a question in my mind whether they reached every central station, as their advertising manager would have our company believe. So, for one year I have kept account of the electrical papers and periodicals subscribed for and received by the manager or superintendent of electric light companies in twenty-seven states, (which has been my territory), and in summing it up, I find that your periodical predominates, three to one. I do not get in many telephone plants, but when I do, I invariably find the 'Western Electrician' staring me in the face."

The letter from which the above is taken, is dated May 8, 1905, and is on file in this office.

WANTED, FOR SALE *and similar* **WANT COLUMN** *advertisements (50 words or less), $1.50 an insertion; additional words 3c each.*
POSITION WANTED *advertisements (50 words or less), $1.00 an insertion; additional words 2c each.*

POSITION WANTED

With an electric light company as manager or superintendent, in a town of from 2,500 to 25,000; twenty years' experience; proficient, energetic and honest; references, prominent central station officers. Address Box 551, care Western Electrician, 510 Marquette Building, Chicago.

POSITION WANTED

By an all around electrician. Four years' experience, age 23 and married. Thoroughly acquainted with outside and inside work, both D. C. and A. C. arc lamps, meters, etc. Can furnish A1 references. Address Box 548, care of Western Electrician, 510 Marquette Building, Chicago.

WANTED.

A man experienced in testing and installing alternating current and direct current machinery. Write fully, giving age, qualifications and salary expected. Address Box 550, care of Western Electrician, 510 Marquette Building, Chicago.

WANTED

An experienced electrician and superintendent to take charge of an up-to-date factory in the manufacture of jump-spark coils. Only a fully competent man wanted. Address Box 549, care of Western Electrician, 510 Marquette Bldg., Chicago.

WANTED

By a prominent company, an electrical engineer thoroughly familiar with electrical and mechanical design of railway or stationary D. C. motors.

Must be a technical graduate of several years' practical experience. Write fully, giving age, qualifications, experience and salary expected. Address Box 547, care of Western Electrician, 510 Marquette Bldg., Chicago.

FOR SALE

At a bargain. One 30 K. W. Warren Alternator, single phase, 16,000 alternations, 2,300 volts, marble switchboard, 4 H. P. Wagner motor, 4,000 No. 4 copper wire, 6 or 8 Transformers and many other electrical appliances. Address A. OTTO, Fredonia Kansas.

FIBRE-GRAPHITE COMMUTATOR BRUSH — SELF-LUBRICATING — NOISELESS

There's No Friction

with the Fibre-Graphite Commutator Brush

Being 90 per cent. pure graphite, it insures low resistance, no sparking under a varying load, and longer wear. There is no greasing required. The Fibre-Graphite is therefore the most economic brush on the market. Send for price list.

SAMSON TURBINE

A gain of 3% in EFFICIENCY means 3 H. P. additional in each 100 H. P. You can soon figure out what this would amount to at the end of a year. Very HIGH EFFICIENCY at all gateages is one of the strong points in a SAMSON TURBINE.

THE JAMES LEFFEL & CO.

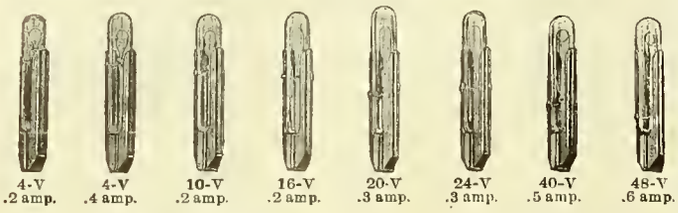
KELLOGG

MINIATURE LAMPS

For Telephone Switchboards, Etc.



4-V .2 amp. | 4-V .4 amp. | 10-V .2 amp. | 16-V .2 amp. | 20-V .3 amp. | 24-V .3 amp. | 40-V .5 amp. | 48-V .6 amp.

ADVANTAGES

1. **Our TIPLESS Lamps are unequaled.**
The lamps are rounded off on the front end, thereby forming a small but effective convex lens which focuses all the light rays into the most desirable position.
2. **The EFFECTIVE candle power is the MAXIMUM.**
This is due partly to the lens effect, and also to the fact that the filaments are manufactured by a special process which produces a uniform and long-lived filament.
3. **The filament is very strong.**
4. **GENUINE PLATINUM is used where the circuit is carried through the glass.**
5. **These lamps have a nearly perfect VACUUM.**
This gives them long life, and it is obtained through the use of our improved vacuum pumps.
6. **Each lamp is given a careful individual test for voltage, candle power, mechanical perfection and size.**

Table of Voltages.

Voltage	Approximate Candle power	Amperes
3	.2	.2
4	.2	.2
4	.2	.4
5	.2	.15
6	.2	.15
10	.2	.1
12	.2	.1
14	.2	.1
16	.2	.1
20	.3	.1
24	.3	.075
30	.3	.085
40	.5	.085
48	.6	.075

We also manufacture the old-fashioned TIP lamps, and can sell them at a lower figure than any other lamp. Our prices for the tipless lamp are the lowest on the market.

It Can't Be Beat—The Guthrie Flasher

A SIGN FLASHER WITHOUT A MOTOR

Agents Wanted

A FEW ADVANTAGES OF THIS FLASHER OVER ALL OTHERS:

First.—The Price is lower.
Second.—It has fewer parts and is therefore the simplest flasher on the market.
Third.—It has no motor to cause trouble and consume current.
Fourth.—It costs nothing to operate this flasher.
Fifth.—It only occupies a space of 5 x 8 inches.
Sixth.—It can be regulated to flash any signs or show window lights in any manner desired.
Any combination of lights, without motor or cylinder.
Simplest and best on the market.
Works on any current.
The disadvantage of a flasher was the motor question.
We have overcome this and are putting out an article that meets a long felt want.

Electrical Testing

By

Norman H. Schneider

Chief Constructing Electrical Engineer
White City, Collinswood, O.

A book for every man who is interested in Electrical work.

You Should Have This Book

BECAUSE:

It is written for the practical man.
It gives the very latest information.
It treats of modern instruments universally adopted.
It contains a complete chapter on testing with the Voltmeter not explained in any other book.
The formulas given are fully explained and worked out in simple arithmetic.
The tests given are such as occur every day in the engine room, power house, telephone exchange, cable laying and constructors' work in the field.
It is written by a man who has had extensive practical experience in all branches of electrical testing.
It is a well made book and sold at a reasonable price.

210 pages, over one hundred illustrations and tables, handsome limp leather, postpaid. **Price, $2.00**

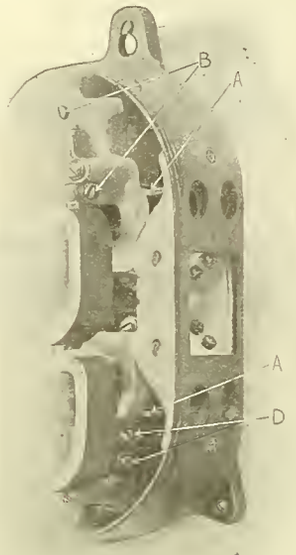
Westinghouse Polyphase Integrating Wattmeter

The Porcelain Terminal Block



And the manner of introducing the leads at the sides of the meter, as shown in the illustration, are valuable features, allowing the meter to be connected or disconnected without removing the cover, thus avoiding any danger of changing adjustments or of letting foreign matter enter the meter.

The Adjustments

Are simple and readily accessible when the cover is removed. The speed of the disc is controlled by permanent magnets. To increase or decrease the speed, loosen the screws at "D" (see illustration), and move the magnets backward or forward. The compensation for friction is made by changing the position of the adjusting brackets shown at "A," to accomplish this loosen two screws shown at "B," those for the lower brackets are similarly placed.

We Are The Originators of
The Polyphase Induction Meter

If we could make you feel all the good points of our motors as we know them. If we could convey to you that knowledge of their absolute reliability which years of association with them has stamped on the minds of our customers, we are sure that you would join the ranks of the many successful Station Managers, who have established a day single phase power service and through the medium of these motors rapidly and profitably extended their business.

The benefits of your buying a Wagner Motor are not confined to this company, they are shared by you. We reap the first benefit of making the sale, all the rest of the good is yours; satisfied customers, no repairs, no trouble. The steady stream of motors coming out of our shipping room gives ample proof of the growing importance of the Single Phase Motor in the development of Central Station business.

If you do not know all that you should about this subject write for bulletin No. 68 H, we will see that information comes to you.

ALWAYS IN STOCK

MANUFACTURED BY

G. I. Co.

CHICAGO EDISON COMPANY, 139 Adams Street, CHICAGO.

NOVELTY CABLE SLEEVE—Made also in two and three way branches.

SPLICES AND POT HEADS

Can be made by any man who can handle a soldering iron, better and cheaper than by any lead joint wiper. And, tho' absolutely permanent, they can be opened at any time for inspection or repair and again restored. How much money would this have saved *your* exchange? Details in Catalogue 125-A.

Made by THE F. BISSELL COMPANY TOLEDO, O.

NOVELTY CABLE POT HEAD

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Price $1.00.

A complete and practical work in handy pocket size.

1906 CATALOGUE

The 1906 edition of our catalogue is printed and being distributed.

It is the most complete and valuable book we have published.

It is full of illustrations, and contains much valuable information of the latest inventions and devices known to the science, and uses of electricity.

The cipher code enables correspondence to be carried on completely by telegraph.

Every article has a code word, a number, the weight of the article, contents of standard packages, etc.

The number of the catalogue is 24.

If you do not receive a copy write for one.

OKONITE IT NEVER DISAPPOINTS

ELECTRICAL SUPPLIES

264-266-268-270 Fifth Avenue, Chicago

OKONITE IT NEVER DISAPPOINTS

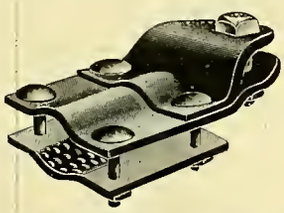
Kearney Cable Clamps

will enable you to pull the strains off your cables at corners, dead-ends and curves. Also at storm guys.

They do away with splicing, serving, etc.

On trial orders for 25 or more we will ship by prepaid freight and give 30 days in which to try them. If satisfactory pay us. If not, return freight collect.

They Save Labor and Time



Save Money and Material More Perfect Construction

Just What the World Has Been Waiting For.

NEW "MORRISON" STORAGE BATTERY

THE CELL

This plate is so strong electrically and mechanically that no amount of electrical abuse or of vibration in traction service can dislodge even the slightest particle of its active material.

Lowest internal resistance of any storage battery in the world.

The weight efficiency is conservatively 14 watts per pound total weight, and electrical efficiency unsurpassed . . . .

HURDLES AND BUCKEYE LAMPS

No, in spite of what you may think to the contrary, it is not "utter nonsense" to mention "hurdles" and Buckeye Lamps in the same breath! We were fully aware that the word "hurdles" would catch your eye so we put it there on purpose (for there are so many plain, matter-of-fact lamp ads that DO NOT catch your eye!)

Now, we simply mentioned "hurdles" because there is no question but that this "Buck" jumped 31 "hurdles" before it became the "stamp of quality." Think of it, every Buckeye lamp goes through

31 RIGID INSPECTIONS!

Do you realize what this means? These 31 rigid inspections give you a lamp as perfect as it is possible to make an incandescent lamp. That is why we say

"BETTER BUY BUCKEYE!"

"ONEIDA" GALVANIZED CHAIN

EXPRESS PREPAID

Our flexible steel chain (American pattern) herewith illustrated will outwear cord, cable or rope many times over. Give it a trial for raising and lowering Arc Lamps suspended from Mast Arms.

You will use no other attachment after making this test as "Oneida" Galvanized Chain is absolutely uniform in strength.

HEAVILY GALVANIZED! RUST PROOF!

You need have no fear of your lamps falling to the street as happens so unexpectedly when strands of cable give way or a rope (or cord) has rotted out.

Do It Today

Tomorrow Never Comes

We suggest that you reserve space NOW for an attractive advertising announcement in the

WESTERN ELECTRICIAN'S ANNUAL NEW YEARS NUMBER

It will be one of the handsomest and most instructive issues of an Electrical Journal ever published.

You will, of course, wish to be represented in it, so why not reserve space NOW and receive a much better location than it will be possible to obtain later on?

Let us know your wishes TODAY.

Western Electrician
510 Marquette Bldg.
Chicago

WANTED, FOR SALE *and similar* **WANT COLUMN** *advertisements (50 words or less), $1.50 an insertion; additional words 3c each*
POSITION WANTED *advertisements (50 words or less), $1.00 an insertion; additional words 2c each*

POSITION WANTED.

As engineer and electrician in some small plant. Ten years' experience. Familiar with all branches of the business. Married, 35 years of age, and can furnish recommendations as to ability and character. Address box 545, care of Western Electrician, 510 Marquette Bldg., Chicago.

POSITION WANTED

A man with 15 years' experience in designing, building and managing Electric light and Waterworks plant, wants position by the first of the year; would take position as superintendent and general manager of a plant, or would go on the road as salesman for a manufacturer of electrical or steam machinery; or would take a position as erecting foreman for some contractor who has work of this kind under contract; can give best of reference and reason for changing. Address Box 554 care Western Electrician, 510 Marquette building, Chicago.

WANTED

Energetic young man of technical training having considerable station experience in meter and transformer testing. Must have had actual experience with modern induction wattmeters. Position of responsibility, $90 a month. Address Box 553, care Western Electrician, 510 Marquette Building, Chicago.

WANTED.

A young man of technical education to act as selling engineer and figure wiring installations for a large Chicago company. Call at 309 Merchants Loan and Trust Building.

WANTED.

A man experienced in testing and installing alternating current and direct current machinery. Write fully, giving age, qualifications and salary expected. Address Box 550, care of Western Electrician, 510 Marquette Building, Chicago.

WANTED

An experienced electrician and superintendent to take charge of an up-to-date factory in the manufacture of jump-spark coils. Only a fully competent man wanted. Address Box 549, care of Western Electrician, 510 Marquette Bldg., Chicago.

WANTED

By a prominent company, an electrical engineer thoroughly familiar with electrical and mechanical design of railway or stationary D. C. motors.

Must be a technical graduate of several years' practical experience. Write fully, giving age, qualifications, experience and salary expected. Address Box 547, care of Western Electrician, 510 Marquette Bldg., Chicago.

FOR SALE—A Paying Plant

A Central Station Electric Light Plant in good Illinois town, 2,500 population, new machinery, 10-year street light contract. About $5,000 cash required, balance can be paid out of profits. This is a good opportunity. Address Box 552, care Western Electrician, 510 Marquette Bldg., Chicago.

TELEPHONE ENGINEERS.

Engineers of experience with telephone manufacturers will gain information to their interest by writing to Box 1732 General Post Office, New York City, in regard to business openings. State nature of present work and name of employer as well as age, experience and salary expected.

Second-Hand Machinery

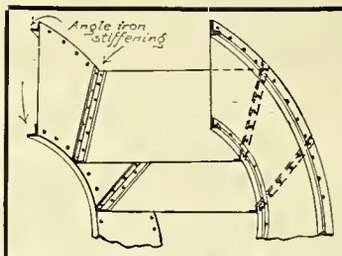
is of inestimable value to electricians. Such a library is best formed by occasional and carefully chosen purchases. ELECTRICIAN PUB. CO., 510 Marquette Building, Chicago.



OF INTEREST TO FAN USERS ONLY

The above is a radial section of a portion of the fan wheel of a

GREEN-MATTEAWAN FAN

It shows the **angle iron stiffening** rings which we apply to both the inner and outer edges of the side plates, where other makers use flat bars. This stiffening makes a more rigid and truer running wheel and enables us to reduce the clearance between the inner edge of the side plates and the housing. The result is that there is less leakage of air back past the wheel and more air at the discharge, for the same expenditure of power. As we announced some time ago we have worked out new designs for all our FANS, BLOWERS and EXHAUSTERS with the object of reducing the amount of power required for driving such apparatus.

Send for our Booklet "WE." on this subject, and, if you do not already have a copy, ask for our Book on Fuel Economy.

HIGHEST AWARD — WEBER — ESTABLISHED 1894 PRODUCER — GAS GASOLINE ENGINES AND HOISTS — GOLD MEDAL

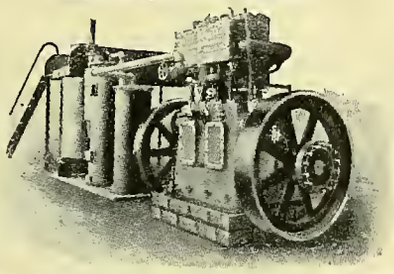
ONE LB. COAL PER HORSE POWER PER HOUR. EVEN WITH COAL AT $5.00 PER TON COSTS LESS THAN ¼ OF ONE CENT PER H. P. PER HOUR OR NOT OVER $7.50 PER YEAR.

Complete Engine and Gas Producer.



BROOKS ELEVATOR CO.

WEBER GAS & GASOLINE ENGINE CO., Kansas City, Mo.: Minneapolis, Minn., Aug. 10th, 1905.

Gentlemen:—The Electric Light Company made a brake test last Saturday night of our Weber Engine and Gas Producer—brakes were set at 100 H. P.

The result of this test was, in a twelve hours' run, the consumption of 1,100 pounds of pea-anthracite coal or 1¼ of a pound per H. P. per hour.

The ash taken from the run amounted to about 270 pounds.

This should be very satisfactory from your standpoint and the Electric Light Company certainly cannot use it for advertising purposes, in fact do not believe they will ever mention having made this test.

Yours truly,

BROOKS ELEVATOR COMPANY.

New Dynamo Tenders' Hand-Book.

By F. B. BADT.

226 Pages, 140 Illustrations. Flexible Cloth Binding. Size of Type Page 5 1-2x3 inches. Price $1.00.

This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 9,000 copies of the old Dynamo Tenders' Hand-Book sold, and over 13,000 of the new.

SAMSON TURBINE

The illustration shows the large NIAGARA design, HORIZONTAL SHAFT TURBINES recently installed by us, for the TELLURIDE POWER TRANSMISSION CO. power station, Logan, Utah. Tests conducted by competent engineers developed as follows:

HEAD.	GATEAGE.	SPEED.	H. P.	GENERATOR EFFI'CY.	TURBINE EFFI'CY.
211.5 ft.	½	400 r.p.m.	1038	95.20%	73.80%
209.7 ft.	¾	400 r.p.m.	1560	96.50%	83.59%
208.9 ft.	Full	400 r.p.m.	1677	96.70%	80.57%

These results have never been equaled by any turbine of the Horizontal Shaft Design, operating under equally HIGH HEADS. The test was made AFTER TURBINES WERE INSTALLED, direct coupled to Generators. Francis' weirs and formulæ for discharge were used. The original test reports on file at our offices. These turbines are all fitted with our SAMSON BALANCED GATES. Note especially the UNIFORM SPEED AT ALL GATEAGES.

THE JAMES LEFFEL & CO., 307 Lagonda St., SPRINGFIELD, OHIO, U. S. A.

ALL METAL TELEPHONE

For Central Energy Systems

This is the telephone you have been wanting for residences, hotels, etc. The case is made of steel and finished in black enamel.

We can furnish them in any color of enamel at a slight difference in cost.

Self-Contained Ringer

Adjustable Transmitter Arm

The parts are all uniform, being made from an expensive set of tools, dies and jigs.

The price is extremely low, especially when you come to consider the fact that the cost of maintenance is practically nothing.

Our circular No. 72-D will tell you more about it. Mailed free.

AUTOMATIC ELECTRIC COMPANY

Van Buren and Morgan Streets, CHICAGO, U. S. A.

Do NOT look for the license label. We are NOT in the trust.

KELLOGG

MINIATURE LAMPS

For Telephone Switchboards, Etc.

4-V .2 amp. | 4-V .4 amp. | 10-V .2 amp. | 16-V .2 amp. | 20-V .3 amp. | 24-V .3 amp. | 40-V .5 amp. | 48-V .6 amp.

ADVANTAGES

1. **Our TIPLESS Lamps are unequaled.**
The lamps are rounded off on the front end, thereby forming a small but effective convex lens which focuses all the light rays into the most desirable position.
2. **The EFFECTIVE candle power is the MAXIMUM.**
This is due partly to the lens effect, and also to the fact that the filaments are manufactured by a special process which produces a uniform and long-lived filament.
3. **The filament is very strong.**
4. **GENUINE PLATINUM is used where the circuit is carried through the glass.**
5. **These lamps have a nearly perfect VACUUM.**
This gives them long life, and it is obtained through the use of our improved vacuum pumps.
6. **Each lamp is given a careful individual test for voltage, candle power, mechanical perfection and size.**

Table of Voltages.

Voltage	Approximate Candle power	Amperes
3	.2	.2
4	.2	.2
4	.2	.4
5	.2	.15
6	.2	.15
10	.2	.1
12	.2	.1
14	.2	.1
16	.2	.1
20	.3	.1
24	.3	.075
30	.3	.085
40	.5	.085
48	.6	.075

We also manufacture the old-fashioned TIP lamps, and can sell them at a lower figure than any other lamp. Our prices for the tipless lamp are the lowest on the market.

ARITHMETIC of ELECTRICITY

By PROF. T. O'CONOR SLOANE

165 Pages. Illustrated. PRICE, $1.00

Contents

CHAPTER I. Introductory. CHAPTER II. Ohm's Law CHAPTER III. Resistance and Conductance. CHAPTER IV. Potential Difference. CHAPTER V. Circular Mills. CHAPTER VI. Special Systems. CHAPTER VII. Work and Energy. CHAPTER VIII. Batteries. CHAPTER IX. Electro-Magnets, Dynamos and Motors. CHAPTER X. Demonstration of Rules. CHAPTER XI. Notation in Power of Ten. Tables.

Standard Electrical Dictionary

By PROF. T. O'CONOR SLOANE

682 Pages. 393 Illustrations. PRICE, $3.00

An Entirely New Edition, Brought Up To Date and Greatly Enlarged. Complete—Concise—Convenient.

A practical handbook of reference, containing definitions of about 5,000 distinct words, terms and phrases.

The work is absolutely indispensable to all in anyway interested in electrical science, from the higher electrical expert to the everyday electrical workman. In fact it should be in the possession of all who desire to keep abreast with the progress of this branch of science.

Fifteenth Edition. Just Published.

ELECTRIC TOY MAKING

DYNAMO BUILDING and ELECTRIC MOTOR CONSTRUCTION

By PROF. T. O'CONOR SLOANE

185 Pages. Very Fully Illustrated. PRICE, $1.00.

Contents

CHAPTER I. Batteries. CHAPTER II. Permanent Magnets. CHAPTER III. Electro-Magnets. CHAPTER IV. Electric Motors. CHAPTER V. Electric Bells. CHAPTER VI. Miscellaneous Toys. CHAPTER VII. Spark and Induction Coils, and Allied Subjects. CHAPTER VIII. Hand-Power Dynamo. CHAPTER IX. Miscellaneous Receipts and Formulæ.

Twelfth Edition. Just Published.

How to Become a Successful ELECTRICIAN

By PROF. T. O'CONOR SLOANE

200 Pages. Illustrated. PRICE, $1.00

Contents

CHAPTER I. Introductory. CHAPTER II. Mathematics, CHAPTER III. Physics. CHAPTER IV. Chemistry. CHAPTER V. Electricity at Home. CHAPTER VI. Mechanical Engineering. CHAPTER VII. Drawing. CHAPTER VIII. Teachers. CHAPTER IX. Electrical Factory Work for Students, CHAPTER X. College Education. CHAPTER XI. Steam Engineering CHAPTER XII. The Manufacturing Engineer. CHAPTER XIII. The Constructing Engineer. CHAPTER XIV. The Station Engineer. CHAPTER XV. Inventing. CHAPTER XVI. Original Investigation. CHAPTER XVII Success. CHAPTER XVIII. Reading. CHAPTER XIX. Ethics.

Why Not Use the Best

AND THE ONLY GENUINE

Wrigley Patented Steel Toggle Bolt

with double flange sides and rigid back for securing brackets and fixtures to hollow tiling, marble slabs and steel ceilings. All other Toggle Bolts pivoted like cuts are infringements. The Trunnion Nut Toggle Bolt has a finished brass cap nut on the end. Hex. for wrench or round for screwdriver, plain or plated, and can be taken off after the bolt has been inserted, to place on the fixture. The bolt screws through the toggle plate the full length. Used for finished work, such as Telephones, Electric Fixtures and Marble Slabs. In ordering, mention if Trunnion Nut with Cap Nut or the plain Toggle Bolt is wanted.

THE SANGAMO TYPE "D" ALTERNATING CURRENT WATTMETER

Having discontinued the manufacture of the Cutmann Meter, over 30,000 of which are in successful operation, we beg to announce that we now have ready for delivery our new Sangamo Type "D" Mercury Motor Meter, which we can recommend with confidence as superior in construction and operative features to any alternating current meter on the market.

The principle of operation of this meter was developed by us after long and thorough experiment, and has never been utilized in any meter before. By the employment of this principle, and the combination of other mechanical and electrical improvements, we have succeeded in developing a meter which we believe will meet with the approval of all unbiased electrical men.

The meter has very high torque, a thrust of less than one-twelfth ounce on the bearing jewel, thus eliminating all "jewel trouble," has very simple adjustments, will stand any amount of vibration without injury, is strongly constructed, light in weight, easy to install, and is accurate on non-inductive and inductive loads.

The Annual New Years and Statistical Number of the Western Electrician

Will be, in our opinion, the handsomest and most valuable number of an electrical journal ever published.

Advertisers will find it an excellent number through which to make known the merits of their product to the buyers of the world.

Better reserve space for an attractive announcement NOW and obtain a choice location.

The "REFLECTRIC"

is furnished FREE to customers by live Central Stations.

1906 CATALOGUE

The 1906 edition of our catalogue is printed and being distributed.

It is the most complete and valuable book we have published.

It is full of illustrations, and contains much valuable information of the latest inventions and devices known to the science, and uses of electricity.

The cipher code enables correspondence to be carried on completely by telegraph.

Every article has a code word, a number, the weight of the article, contents of standard packages, etc.

The number of the catalogue is 24.

If you do not receive a copy write for one.

It Can't Be Beat—The Guthrie Flasher

A SIGN FLASHER WITHOUT A MOTOR

A FEW ADVANTAGES OF THIS FLASHER OVER ALL OTHERS:

First.—The Price is lower.
Second.—It has fewer parts and is therefore the simplest flasher on the market.
Third.—It has no motor to cause trouble and consume current.
Fourth.—It costs nothing to operate this flasher.
Fifth.—It only occupies a space of 5 x 8 inches.
Sixth.—It can be regulated to flash any signs or show window lights in any manner desired.

Any combination of lights, without motor or cylinder.
Simplest and best on the market.
Works on any current.
The disadvantage of a flasher was the motor question.
We have overcome this and are putting out an article that meets a long felt want.

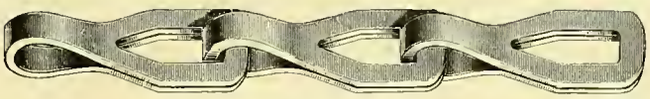
"ONEIDA" GALVANIZED CHAIN

EXPRESS PREPAID

Our flexible steel chain (American pattern) herewith illustrated will outwear cord, cable or rope many times over. Give it a trial for raising and lowering Arc Lamps suspended from Mast Arms.

You will use no other attachment after making this test as "Oneida" Galvanized Chain is absolutely uniform in strength.



HEAVILY GALVANIZED! RUST PROOF!

You need have no fear of your lamps falling to the street as happens so unexpectedly when strands of cable give way or a rope or cord has rotted out.

COMBINED VOLTAGE AND FREQUENCY INDICATOR

It consists of a Voltmeter with standard scale and pointer; over this voltage scale a second scale affixed to an arm is free to move, this second scale being plotted "Cycles." The one pointer in the instrument thus indicating voltage on the first scale and frequency on the second scale.

This instrument serves to assist the Operating Department in keeping the frequency of the circuit standard. By its use Transformer core losses are always maintained normal, as core losses increase rapidly with decreasing frequency. It also affords a means of maintaining the accuracy of Indicating Wattmeters, the accuracy of Indicating Wattmeters being seriously affected by change of frequency.

The use of this instrument also serves to get the best results from the Polyphase Motors, their capacity being affected by change of frequency.

These instruments will indicate at all times, in addition to the frequency, the exact voltage; they are most carefully made, and carefully standardized, and of such construction that they will not be easily put out of order.

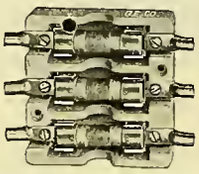
ENCLOSED FUSES AND CUT-OUTS

(National Electrical Code Standard)

These fuses and cut-outs stand every test and meet every specification determined upon by the Underwriters' Committee after two years of investigation and over 1,000 tests. Write for further information about our complete line.

Three to Two Wire Double Branch, 3-30 Amp., 250 Volt Cut-Out.



Three Wire Main Line, 31-60 Amp., 250 Volt Cut-Out.

Single Pole, 3-30 Amp., 600 Volt Cut-Out.

Single Pole, 201-400 Amp., 600 Volt Cut-Out.

30 Ampere, 600 Volt Fuse.

600 Ampere, 250 Volt Fuse.

General Electric Enclosed Fuses blow with an unvarying and lifelong accuracy obtained by the use of a special alloy fuse metal. All fuses are indicating.

The fuses have maximum strength, owing to the use of a special filler and the best quality of fiber for the enclosing tube.

General Electric Cut-Outs have maximum strength and minimum weight, and are easy to install, re-fuse and keep clean.

Do It Today

Tomorrow Never Comes

We suggest that you reserve space NOW for an attractive advertising announcement in the

WESTERN ELECTRICIAN'S ANNUAL NEW YEARS NUMBER

It will be one of the handsomest and most instructive issues of an Electrical Journal ever published.

You will, of course, wish to be represented in it, so why not reserve space NOW and receive a much better location than it will be possible to obtain later on?

Let us know your wishes TODAY.

Western Electrician
510 Marquette Bldg.
Chicago

WANTED, FOR SALE *and similar* **WANT COLUMN** *advertisements (50 words or less), $1.50 an insertion; additional words 3c each.* **POSITION WANTED** *advertisements (50 words or less), $1.00 an insertion; additional words 2c each.*

POSITION WANTED

Electrician and mechanic of 19 years' experience in the electrical field with excellent references as to ability and moral standing will accept a reasonable offer. My specialty is construction work, either telephone or electric light. Address Box 555 care of Western Electrician, 510 Marquette Bldg. Chicago.

WANTED

We want a salesman for the city of Chicago and territory within a radius of 200 miles. Must be acquainted with electrical trade. Excellent opportunity. Address with particulars Morris Elec. Co., Inc., Wilmington, Del.

WANTED

Draftsmen—We have positions now open for draftsmen. Call or address Western Electric Co. Chicago, Ill.

WANTED

Energetic young man of technical training having considerable station experience in meter and transformer testing. Must have had actual experience with modern induction wattmeters. Position of responsibility, $90 a month. Address Box 553, care Western Electrician, 510 Marquette Building, Chicago.

WANTED

First class chandelier hangers. The Sanborn-Marsh Elec. Co. Indianapolis, Ind.

WANTED.

A man experienced in testing and installing alternating current and direct current machinery. Write fully, giving age, qualifications and salary expected. Address Box 550, care of Western Electrician, 510 Marquette Building, Chicago.

WANTED

An experienced electrician and superintendent to take charge of an up-to-date factory in the manufacture of jump-spark coils. Only a fully competent man wanted. Address Box 549, care of Western Electrician, 510 Marquette Bldg., Chicago.

WANTED

To purchase good second-hand 230 or 240 volt, 60 cycle, single phase, 10 or 12 K. W., belt driven A. C. generator, complete with necessary exciter. Address, stating price, Texas Tie and Lumber Preserving Co., Somerville, Texas.

WANTED

Assistant engineer, by a company manufacturing electrical railway material in Central Ohio, an assistant in engineering department capable of designing, testing and drafting. A technical graduate with practical knowledge of shop requirements preferred. Apply, stating age, salary expected, experience and references. Address Box 556, care of Western Electrician, 510 Marquette Bldg., Chicago.

WANTED

A young man with a good electrical education and knowledge of telephone line construction. Should be familiar with locating new pole lines and transmission standards. Work located in Western Pennsylvania. No application considered unless age and salary expected are stated. Address Box 557, care Western Electrician, 510 Marquette Bldg., Chicago.

FOR SALE—A Paying Plant

A Central Station Electric Light Plant in good Illinois town, 2,500 population, new machinery, 10-year street light contract. About $5,000 cash required, balance can be paid out of profits. This is a good opportunity. Address Box 552, care Western Electrician, 510 Marquette Bldg., Chicago.

TELEPHONE ENGINEERS.

Engineers of experience with telephone manufacturers will gain information to their interest by writing to Box 1732 General Post Office, New York City, in regard to business openings. State nature of present work and name of employer as well as age, experience and salary expected.

NEW COMPANY ABOUT READY

LAST OF MACHINERY INSTALLED BY DECEMBER 15.

Will Produce a Dry Battery Eighty Per Cent. Better Than Anything Known.

On the 10th of December all the machinery for the Central Electric Manufacturing company will be in the city and the new plant will be in operation by the 15th.

On December 7 the stockholders will hold their first meeting and elect the officers of the corporation, and Carl Jaeger, the manager of the new concern, has just finished wiring the building and making ready for the last of the machinery. The new dry battery to be manufactured by this company will revolutionize that industry. This new product will be known as the Black Hawk dry cell battery.

Carl Jaeger and his brother, who is also an electrician in Germany control the patents.

From 60 to 80 per cent. more efficacy is claimed for this new battery above anything ever produced. The principal ingredient in its composition is a new discovery and must be imported from Germany.

The battery will have a longer life, greater voltage and higher amperage than anything on the market. They claim it is impossible for one of these batteries to become "dead" before using.

Two kinds will be manufactured, those intended for immediate use and others intended for dealers who would desire to keep them upon their shelves for any length of time.

The United States government is now working a test of these batteries, and if the company can produce what they claim, the government alone will use thousands upon thousands each year.

The company will start out with about twenty men and they feel certain the number will be increased to 100 by next summer.

The capital—$30,000—is all paid up and owned by local people, who feel sanguine of having one of the largest institutions in Rock Island in a very few years.

Canadian Holiday Excursions Via the Wabash

December 14, 15, 16 and 17, the Wabash will sell excursion tickets from Chicago to Canada at one fare for the round trip, good to return until January 6, 1906. Write for details. F. H. TRISTRAM, A. G. P. A., 311 Marquette Bldg., Chicago, Ill.

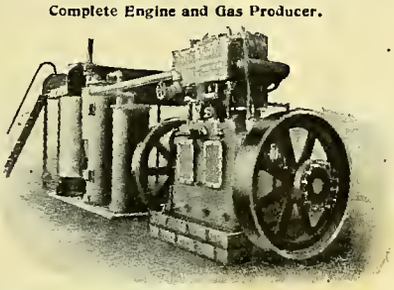
Complete Engine and Gas Producer.



BROOKS ELEVATOR CO.

WEBER GAS & GASOLINE ENGINE CO., Minneapolis, Minn., Aug. 10th, 1905.
Kansas City, Mo.:

Gentlemen:—The Electric Light Company made a brake test last Saturday night of our Weber Engine and Gas Producer—brakes were set at 100 H. P.
The result of this test was, in a twelve hours' run, the consumption of 1,100 pounds of pea-anthracite coal or ¾ of a pound per H. P. per hour.
The ash taken from the run amounted to about 270 pounds.
This should be very satisfactory from your standpoint and the Electric Light Company certainly cannot use it for advertising purposes, in fact do not believe they will ever mention having made this test. yours truly,
BROOKS ELEVATOR COMPANY.

KELLOGG

MINIATURE LAMPS

For Telephone Switchboards, Etc.

4-V .2 amp. | 4-V .4 amp. | 10-V .2 amp. | 16-V .2 amp. | 20-V .3 amp. | 24-V .3 amp. | 40-V .5 amp. | 48-V .6 amp.

ADVANTAGES

1. Our TIPLESS Lamps are unequaled.
The lamps are rounded off on the front end, thereby forming a small but effective convex lens which focuses all the light rays into the most desirable position.
2. The EFFECTIVE candle power is the MAXIMUM.
This is due partly to the lens effect, and also to the fact that the filaments are manufactured by a special process which produces a uniform and long-lived filament.
3. The filament is very strong.
4. GENUINE PLATINUM is used where the circuit is carried through the glass.
5. These lamps have a nearly perfect VACUUM.
This gives them long life, and it is obtained through the use of our improved vacuum pumps.
6. Each lamp is given a careful individual test for voltage, candle power, mechanical perfection and size.

Table of Voltages.

Voltage	Approximate Candle power	Amperes
3	.2	.2
4	.2	.2
4	.2	.4
5	.2	.15
6	.2	.15
10	.2	.1
12	.2	.1
14	.2	.1
16	.2	.1
20	.3	.1
24	.3	.075
30	.3	.085
40	.5	.085
48	.6	.075

We also manufacture the old-fashioned TIP lamps, and can sell them at a lower figure than any other lamp. Our prices for the tipless lamp are the lowest on the market.

Westinghouse

Type "F" Automatic Carbon Break Circuit Breaker

Dimensions of base, 8½ x 2¾ inches for all capacities
Made in 12½, 25, 50 and 75 Ampere Sizes
For 250 Volt D. C. and 440 volt A. C. Circuits
Front Connection, Overload Release, Single Pole

This breaker is the most compact and simple design on the market, at a price only slightly higher than for a switch with enclosed fuses. It can be depended upon for successful and continuous operation wherever installed.

It can be tripped by hand, thus acting as a simple switch, by raising the small knob at the right near the top. The tripping current may be adjusted between the limits of 80% and 160% of rated capacity by simply turning the thumb-screw at base of breaker.

1906 CATALOGUE

The 1906 edition of our catalogue is printed and being distributed.

It is the most complete and valuable book we have published.

It is full of illustrations, and contains much valuable information of the latest inventions and devices known to the science, and uses of electricity.

The cipher code enables correspondence to be carried on completely by telegraph.

Every article has a code word, a number, the weight of the article, contents of standard packages, etc.

The number of the catalogue is 24.

If you do not receive a copy write for one.

STANDARD OF THE WORLD

ELECTRA CARBONS

"TRADE MARK"

HIGHEST GRADE NUERNBERG

They give more light, whiter light and less dust than any other carbon. Their quality is uniform and always of the highest grade. Diameter and straightness perfect. Grand prize St. Louis World's Fair, 1904

HUGO REISINGER, SOLE IMPORTER 11 Broadway, NEW YORK

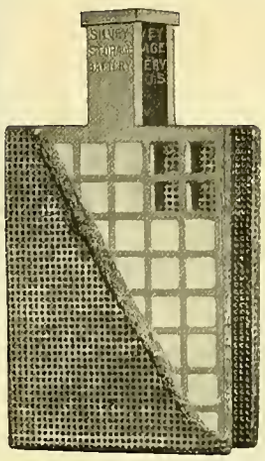
Is Money an Object to You

Automatic Machinery

affords the best way of **cheapening** the cost of making small **assembled articles.**

Our specialty is making machines that make and assemble small articles in large quantities. If you turn out less than **50,000** assembled "parts" **per day,** you are losing money. If you don't believe it, put it up to us to furnish the proof. Send us a sample and we'll surprise you. It **costs you nothing** if we fail to duplicate your sample automatically. Why not **try us?**

C. H. M'GIEHAN & CO., 11 Broadway, NEW YORK



A Handsome Young "Couple"

is the SILVEY S. B. Positive and Negative Pair in their new dresses of perforated Sheet Lead. They may not wear a "smile which won't come off," but they do have active material which cannot "shed"

5-10-20 Ampere Hour Storage Battery Couples

where small current is required.

"Little" Giant Storage Batteries

are constructed for all purposes to which storage batteries are adaptable. They retain their charge for long periods. Have greatest output for size and weight. Our Sparking Batteries have hard wood cases, thoroughly acid proof. Every battery guaranteed.

MANUFACTURED BY

Chicago Pneumatic Tool Company

Fisher Building, CHICAGO 95 Liberty Street, NEW YORK

As a Practical Book for Practical Men Spangenberg's Book Ranks First

All the engineering information you should have; all you really need is contained in this book in plain, practical and concise form.

Spangenberg's Steam and Electrical Engineering

is a complete library covering the subject in all its various branches and contains 672 pages. The only book ever published containing 1035 questions and answers. Written so you can understand it.

$3.60 is the price, and it is sold with the understanding that it may be returned if not satisfactory, and your money will be refunded immediately. Out of 10,000 books sold only two have been returned. This fact speaks for itself.

Bound in Silk Cloth. Size 6x9. 672 pages. 648 Illustrations.

CUT OUT AND MAIL TO-DAY

GEO. A. ZELLER BOOK COMPANY

42 S. Fourth Street St. Louis, Mo.

I accept your offer to send me, express prepaid, one of Spangenberg's Steam and Electrical Engineering, price $3.60, and enclose $2 as first payment. The balance, $1.60, I agree to remit in 50 cent monthly installments, money or express order or Stamps.

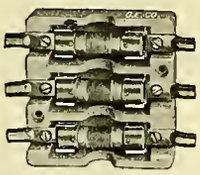
ENCLOSED FUSES AND CUT-OUTS

(National Electrical Code Standard)

These fuses and cut-outs stand every test and meet every specification determined upon by the Underwriters' Committee after two years of investigation and over 1,000 tests. Write for further information about our complete line.

Three to Two Wire Double Branch, 3-30 Amp., 250 Volt Cut-Out.



Three Wire Main Line, 31-60 Amp., 250 Volt Cut-Out.

Single Pole, 3-30 Amp., 600 Volt Cut-Out.

Single Pole, 201-400 Amp., 600 Volt Cut-Out.

30 Ampere, 600 Volt Fuse.

600 Ampere, 250 Volt Fuse.

General Electric Enclosed Fuses blow with an unvarying and lifelong accuracy obtained by the use of a special alloy fuse metal. All fuses are indicating.

The fuses have maximum strength, owing to the use of a special filler and the best quality of fiber for the enclosing tube.

General Electric Cut-Outs have maximum strength and minimum weight, and are easy to install, re-fuse and keep clean.

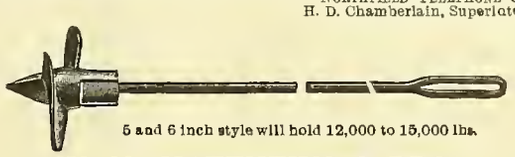
FROSTS, SLEETS, THAWS AND FREEZINGS ARE COMING!
Go Over Your Lines and Anchor the Weak Places With
STOMBAUGH GUY ANCHORS
We give herewith the experience of one company

OFFICE OF NORTHFIELD TELEPHONE COMPANY,
NORTHFIELD, VT., Dec. 5, 1904.

Gentlemen:—Yours of Nov. 30th received and contents noted. We have used your Anchors and have no doubt that they will prove satisfactory.

On the night of Nov. 20th this section was visited by the most severe storm we have had for years. On our lines running East and West there was from one to two inches of ice. Those poles guyed by the Stombaugh Guy Anchor are still standing, and we think that this is as good a test of their worth as we could have had.

Very truly yours,
NORTHFIELD TELEPHONE COMPANY,
H. D. Chamberlain, Superintendent.



5 and 6 inch style will hold 12,000 to 15,000 lbs.

OF INTEREST TO FAN USERS ONLY

The above is a radial section of a portion of the fan wheel of a

GREEN-MATTEAWAN FAN

It shows the **angle iron stiffening** rings which we apply to both the inner and outer edges of the side plates, where other makers use flat bars. This stiffening makes a more rigid and truer running wheel and enables us to reduce the clearance between the inner edge of the side plates and the housing. The result is that there is less leakage of air back past the wheel and more air at the discharge, for the same expenditure of power. As we announced some time ago we have worked out new designs for all our FANS, BLOWERS and EXHAUSTERS with the object of reducing the amount of power required for driving such apparatus.

Send for our Booklet "WE." on this subject, and, if you do not already have a copy, ask for our Book on Fuel Economy.

WESTERN ELECTRICIAN'S ANNUAL NEW YEARS NUMBER

It will be one of the handsomest and most instructive issues of an Electrical Journal ever published.

You will, of course, wish to be represented in it, so why not reserve space NOW and receive a much better location than it will be possible to obtain later on?

Let us know your wishes TODAY.

Western Electrician
510 Marquette Bldg.
Chicago

WANTED, FOR SALE *and similar* **WANT COLUMN** *advertisements (50 words or less), $1.50 an insertion; additional words 3c each.* **POSITION WANTED** *advertisements (50 words or less), $1.00 an insertion; additional words 2c each*

WANTED

We want a salesman for the city of Chicago and territory within a radius of 200 miles. Must be acquainted with electrical trade. Excellent opportunity. Address with particulars Morris Elec. Co., Inc., Wilmington, Del.

WANTED

Draftsmen—We have positions now open for draftsmen. Call or address Western Electric Co., Chicago, Ill.

WANTED.

A man experienced in testing and installing alternating current and direct current machinery. Write fully, giving age, qualifications and salary expected. Address Box 550, care of Western Electrician, 510 Marquette Building, Chicago.

WANTED

An experienced electrician and superintendent to take charge of an up-to-date factory in the manufacture of jump-spark coils. Only a fully competent man wanted. Address Box 549, care of Western Electrician, 510 Marquette Bldg., Chicago

WANTED

To purchase good second-hand 230 or 240 volt, 60 cycle, single phase, 10 or 12 K. W., belt driven A. C. generator, complete with necessary exciter. Address, stating price, Texas Tie and Lumber Preserving Co., Somerville, Texas.

WANTED

Running engineer in water and light plant, noon until midnight run, must be young, married, and have reasonable education for advancement. $50 with house, water and lights free. Must be here ready for business January 1st. Mayfield Water and Light Co., Mayfield, Ky.

FOR SALE

One-half interest in well-established electrical contracting and fixture business in Detroit. Good opening for practical man Price $1,500. Address box 558, care of Western Electrician, 510 Marquette bldg., Chicago.

FOR SALE—A Paying Plant

A Central Station Electric Light Plant in good Illinois town, 2,500 population, new machinery, 10-year street light contract. About $5,000 cash required, balance can be paid out of profits. This is a good opportunity. Address Box 552, care Western Electrician, 510 Marquette Bldg., Chicago.

Second-Hand Machinery

1 24x18 Ideal Automatic Engine.
2 66-in. x 20-ft. Return Tubular Boilers built for 130 lbs. working pressure.

We also have on hand the following leather belts all in good condition:

67 ft. of 18 inch double ply.
73 ft. of 34 inch double ply.
48 ft. of 14 inch double ply.
108 ft. of 24 inch double ply.
85 ft. of 34 inch triple ply.

The above is all in first-class operating condition and is offered subject to prior sale.

Springfield Light, Heat & Power Company
Springfield, Ill.

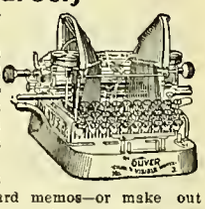
You Can Easily Operate This Typewriter Yourself



Don't worry your correspondent.

Don't write him anything by hand that takes him time to make out—that may leave him in doubt—that he can't easily read.

And don't fill out legal papers or card memos—or make out accounts or hotel menus in your own handwriting.

It looks bad, reflects on your standing, makes people think you can't afford a stenographer, and is sometimes ambiguous.

You can write out your letters—make out an abstract—fill in an insurance policy—enter your card memos—make out your accounts, or a hotel menu—or do any kind of writing you need, on any kind, size or thickness of paper, and space any way you want on

The OLIVER Typewriter

The Standard Visible Writer

You can write any of these things yourself if you do not happen to have a stenographer.

For you can easily learn, with a little practice, to write just as rapidly, and as perfectly, as an expert operator on the OLIVER. Because the OLIVER is the simplified typewriter. And you can see every word you write. About 80% more durable than any other typewriter, because it has about 80% less wearing points than most other typewriters.

80% easier to write with than these other complicated, intricate machines that require "humoring"—technical knowledge—long practice and special skill to operate.

Than machines which cannot be adjusted to any special space—with which it is impossible to write abstracts, insurance policies, or odd-sized documents, except you buy expensive special attachments requiring experts to operate.

You can adjust the OLIVER to any reasonable space—you can write on any reasonable size and thickness of paper, right out to the very edge, without the aid of any expensive attachment or special skill, and your work will be neat appearing, legible and clear.

For the OLIVER is the typewriter for the doctor, the lawyer, the insurance agent, the merchant, the hotel proprietor—or any man who does his own writing.

Write us now for our booklet on the simplified features of the OLIVER.

HIGHEST AWARD — ESTABLISHED 1884 PRODUCER — WEBER — GAS GASOLINE ENGINES AND HOISTS — GOLD MEDAL

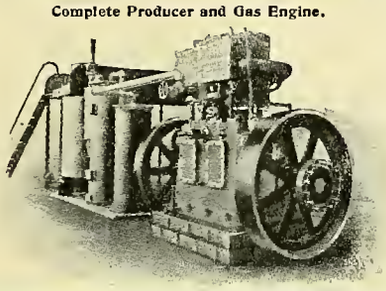
A never failing power through excellence of material, workmanship and time-tried principles of construction.

GAS FOR POWER

HIGHEST AWARD — ESTABLISHED 1884 PRODUCER — WEBER — GAS GASOLINE ENGINES AND HOISTS — GOLD MEDAL

ONE LB. COAL PER HORSE POWER PER HOUR. EVEN WITH COAL AT $5.00 PER TON COSTS LESS THAN ¼ OF ONE CENT PER H. P. PER HOUR OR NOT OVER $7.50 PER YEAR.

Complete Producer and Gas Engine.



BROOKS ELEVATOR CO.

WEBER GAS & GASOLINE ENGINE CO., Kansas City, Mo.: Minneapolis, Minn., Aug. 10th, 1905.

Gentlemen:—The Electric Light Company made a brake test last Saturday night of our Weber Engine and Gas Producer—brakes were set at 100 H. P.

The result of this test was, in a twelve hours' run, the consumption of 1,100 pounds of pea-anthracite coal or ¾ of a pound per H. P. per hour.

The ash taken from the run amounted to about 270 pounds.

This should be very satisfactory from your standpoint and the Electric Light Company certainly cannot use it for advertising purposes, in fact do not believe they will ever mention having made this test. yours truly,

BROOKS ELEVATOR COMPANY.

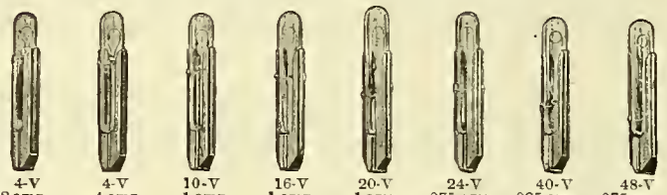
KELLOGG

MINIATURE LAMPS

For Telephone Switchboards, Etc.



4-V .2 amp. | 4-V .4 amp. | 10-V .1 amp. | 16-V .1 amp. | 20-V .1 amp. | 24-V .075 amp. | 40-V .085 amp. | 48-V .075 amp.

ADVANTAGES

1. OUR TIPLESS LAMPS ARE UNEQUALED. The lamps are rounded off on the front end, thereby forming a small but effective convex lens which focuses all the light rays onto the most desirable position.
2. THE EFFECTIVE CANDLEPOWER IS THE MAXIMUM. This is due to the lensa effect and the high electrical efficiency.
3. THE FILAMENT IS VERY DURABLE. They are manufactured by our special process, which produces exceptionally strong, uniform, and long-lived carbon.
4. CHEMICALLY PURE PLATINUM IS USED WHERE THE CURRENT IS CARRIED THROUGH THE GLASS.
5. THE LAMPS HAVE THE HIGHEST VACUUM OBTAINABLE. This gives long life, and greatly reduces the conduction of heat from the filament to the jack.
6. EACH LAMP IS GIVEN A CAREFUL INDIVIDUAL TEST FOR VOLTAGE, CANDLEPOWER, MECHANICAL PERFECTION AND SIZE.

Table of Voltages

TELEPHONE SECURITIES BECOMING VERY POPULAR

That the Automatic Machine Is a Success Has Been Demonstrated Beyond a Doubt.

Caleb L. McKee & Co. says—"That the automatic telephone is a success has been demonstrated beyond a doubt, and the favor with which it has been received by the local public is indicated clearly by the upward movement in the securities of the Columbus Citizens' Telephone Co. At the beginning of the installation of the automatic switchboard the common stock was quoted at about 55 bid while at this time 75 is bid with nothing offered below about 85; the preferred has advanced from par to 107 bid with holders asking 111, and it seems likely to reach a much higher level.

Since Oct. 24th these Stocks have gone up,— the common to par, the preferred to 113½, and they are scarce at that. Our automatic System did it,— can do it for you. Why do you wait?

OUR AUTOMATIC SYSTEM ADOPTED IN THE FOLLOWING CITIES:

Chicago, Ill.	Sioux City, Ia.	Van Wert, O.	Auburn, Me.	Woodstock, N. B.	Hastings, Neb.
Grand Rapids, Mich.	Cleburne, Tex.	Battle Creek, Mich.	Fall River, Mass.	St. Marys, O.	Wausau, Wis.

Talking Points for
THE FOUR-TRACK NEWS
Which Explain Its Emphatic Success

Here are a few reasons why you want THE FOUR-TRACK NEWS on the reading table in your home. Look them over, think them over—then send for a sample copy and see if you don't think THE FOUR-TRACK NEWS is worth $1.00 a year to yourself and your family.
Its scope is confined to no geographical section; the world is its field.
It instructs.
It entertains.
It's different.
It is a universal favorite.
It is always and forever up-to-date.
It is a great help to students in history classes.
There is much in every issue of educational value to every reader.
It is entertaining to the father and mother as well as to the children.
It is eloquent with bright, brief, valuable articles and superb pictures.

Subscriptions, $1.00 a Year; Foreign Countries, $1.50; at News-stands, 10 Cents a Copy.
A sample copy and our special terms to agents will cost you nothing. Send your address and two references to
GEO. H. DANIELS, Publisher
Room No. 119 A, 37 E. 42d St., New York

WESTON ELECTRICAL INSTRUMENT CO.,
Main Office and Works, Waverly Park, NEWARK, N. J.

Illuminated Dial Station Instruments.
These instruments are constructed upon the same general principle as our regular Standard Portable Direct Current Voltmeters and Ammeters, but are much larger, and the working parts are inclosed in a neatly designed, dust-proof cast-iron case which effectively shields the instruments from disturbing influences of external magnetic fields.

Weston Standard Illuminated Dial Station Ammeter, Style B.

Weston Standard
Portable Direct Reading Voltmeters and Millivoltmeters, Ammeters and Milliammeters, Wattmeters and Voltmeters, for Alternating and Direct Current Circuits.
Our portable instruments are recognized as standards throughout the civilized world.
Our Semi-Portable Laboratory Standard Voltmeters and Ammeters are still better.
They are the most reliable, absolute standards for Laboratory use.

1906 CATALOGUE

The 1906 edition of our catalogue is printed and being distributed.

It is the most complete and valuable book we have published.

It is full of illustrations, and contains much valuable information of the latest inventions and devices known to the science, and uses of electricity.

The cipher code enables correspondence to be carried on completely by telegraph.

Every article has a code word, a number, the weight of the article, contents of standard packages, etc.

The number of the catalogue is 24.

If you do not receive a copy write for one.

COLUMBIA LAMPS

GIVE MOST LIGHT

The Highest Standard Always

has been, is, and will be maintained by Columbia Lamps.

A little more care than necessary in applying the most approved methods of lamp making, a little more care in testing and inspecting, a little more in meeting specifications and making prompt deliveries make a big difference in results—they produce Columbia supremacy.

A trial order, subject to our guarantee, will prove.

We also make the Columbia Crystal Lamp with glass or metal shades—unsurpassed for pleasing and efficient illumination.

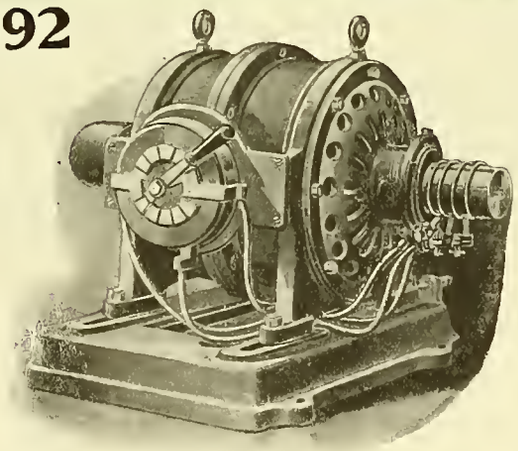
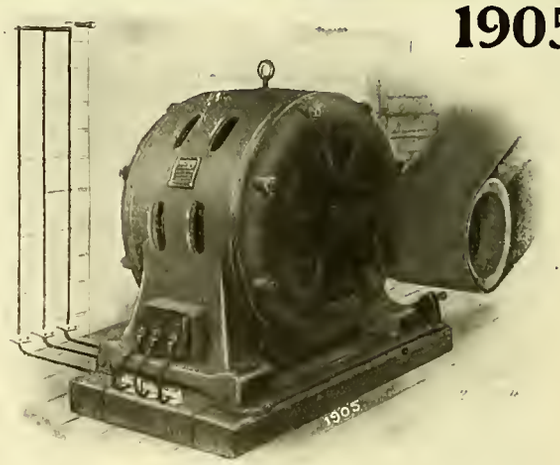
ELECTRICIAN PUBLISHING CO.,
Suite 510 Marquette Bldg., CHICAGO.

1892



1905



THE FIRST

Induction Motor which was commercially successful was produced in 1892 as part of the S. K. C. System. Many of these early motors are still in daily use after thirteen years of constant service.

TODAY

S. K. C. Induction Motors remain markedly superior in points of engineering and manufacture over ordinary apparatus of this class. S. K. C. Induction Motors are adaptable for floor, wall or ceiling use.

The S. K. C. System was the PIONEER in polyphase electrical work. The S. K. C. Transformer was THE FIRST PRODUCED—entitled to any consideration as an efficient piece of electrical apparatus. The first COMMERCIALLY SUCCESSFUL generator of the revolving field type was the S. K. C. "Inductor."

WE POSSESS the advantage of being pioneers. Do you appreciate the value to YOU of what this implies? When designing and installing a plant, large or small, OUR FUND OF EXPERIENCE enables us not to err either in principle or detail.

ST. LOUIS, U. S. A.

The New Spring Shade-Holder

which we are now furnishing with **Prismo Zenith Lamps,** is quite an improvement over the old style screw-holder. It holds the shade in place by means of a spring instead of screws, which permits of a more rapid adjustment of the shade and at the same time holds it more securely in place. It is adapted to all sockets, key and keyless, and adds greatly to the convenience of the **Prismo Lamp.**

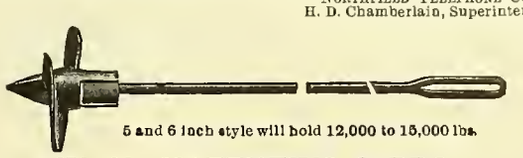
FROSTS, SLEETS, THAWS AND FREEZINGS ARE COMING!
Go Over Your Lines and Anchor the Weak Places With
STOMBAUGH GUY ANCHORS
We give herewith the experience of one company

OFFICE OF NORTHFIELD TELEPHONE COMPANY,
NORTHFIELD, VT., Dec. 5, 1904.

Gentlemen:—Yours of Nov. 30th received and contents noted. We have used your Anchors and have no doubt that they will prove satisfactory.
On the night of Nov. 20th this section was visited by the most severe storm we have had for years. On our lines running East and West there was from one to two inches of ice. Those poles guyed by the Stombaugh Guy Anchor are still standing, and we think that this is as good a test of their worth as we could have had.
Very truly yours,
NORTHFIELD TELEPHONE COMPANY,
H. D. Chamberlain, Superintendent.



5 and 6 inch style will hold 12,000 to 15,000 lbs.

Let us reduce your manufacturing costs

We can do it by building for you automatic machinery that eliminates hand labor from the manufacture of most anything and reduces the cost of the machine work. We'll take all the risk. If you'll send us a sample of what you make, we'll make quotations.

C. H. M'Giehan & Co., 11 Broadway, New York

Do It Today
Tomorrow Never Comes

We suggest that you reserve space NOW for an attractive advertising announcement in the

WESTERN ELECTRICIAN'S ANNUAL NEW YEARS NUMBER

It will be one of the handsomest and most instructive issues of an Electrical Journal ever published.

You will, of course, wish to be represented in it, so why not reserve space NOW and receive a much better location than it will be possible to obtain later on?

Let us know your wishes TODAY.

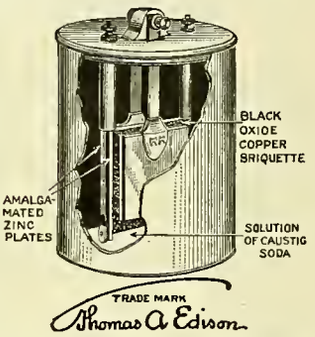
ON PRIMARY BATTERIES—Voltage

One type of battery is now universally used for all hard continuous service, such as the operation of railway semaphore and crossing signals, to the exclusion of other types. In this cell the electrodes are of zinc and copper, with a solution of caustic potash and copper oxide for the depolarizer. It has been chosen over all other types because it has a capacity per unit weight greater than any other, either primary or secondary, and the voltage and current keep up to full value until the battery is entirely exhausted. However, the last point does not hold for even all batteries of the copper oxide type, for in many of them the copper oxide, which is a poor conductor of electricity, is loose or does not cover the whole surface of the negative electrode, or is *mixed with foreign matter*, or is one of the lower oxides of copper and not the black oxide.

When current is drawn from a battery possessing any one of these defects the voltage will fall, on account of the deposit of hydrogen on the negative electrode, and for the same reason the Internal Resistance will Rise.



In one type of battery these defects have been avoided; we quote from Carhart's "Primary Batteries": "Recognizing the good qualities of copper oxide as a depolarizer, EDISON has devised a form designed to meet the objections noted above. The copper oxide is employed in the form of a compressed slab, which, with its connecting copper support, serves also as the negative plate.—In recent cells the device has been resorted to of reducing a superficial film of copper on the oxide before it is sent from the factory."

The effectiveness of this method was demonstrated in a recent test by the D., L. & W. R. R. of equal numbers of EDISON and two other selected makes of copper oxide cells operating a Union signal. At the beginning each battery read 8.5 volts. The Edison made 65,451 signal movements and then gave 8.1 volts; the next best battery made 65,445 movements, but the voltage dropped to 7.75, while the third made 63,535 movements and dropped to 7.25 volts. The difference is enough to make it pay to get the best.

Send for further details of this test and for our BOOK "W. E."

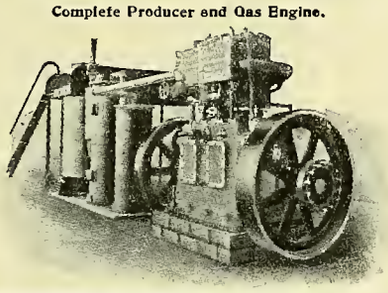
Complete Producer and Gas Engine.



BROOKS ELEVATOR CO.

WEBER GAS & GASOLINE ENGINE CO., Minneapolis, Minn., Aug. 10th, 1905.
Kansas City, Mo.:

Gentlemen:—The Electric Light Company made a brake test last Saturday night of our Weber Engine and Gas Producer—brakes were set at 100 H. P.
The result of this test was, in a twelve hours' run, the consumption of 1,100 pounds of pea-anthracite coal or ¾ of a pound per H. P. per hour.
The ash taken from the run amounted to about 270 pounds.
This should be very satisfactory from your standpoint and the Electric Light Company certainly cannot use it for advertising purposes, in fact do not believe they will ever mention having made this test. yours truly,
BROOKS ELEVATOR COMPANY.

KELLOGG

MINIATURE LAMPS

For Telephone Switchboards, Etc.

4-V .2 amp. | 4-V .4 amp. | 10-V .1 amp. | 16-V .1 amp. | 20-V .1 amp. | 24-V .075 amp. | 40-V .085 amp. | 48-V .075 amp.

ADVANTAGES

1. OUR TIPLESS LAMPS ARE UNEQUALED.
The lamps are rounded off on the front end, thereby forming a small but effective convex lens which focuses all the light rays onto the most desirable position.
2. THE EFFECTIVE CANDLEPOWER IS THE MAXIMUM.
This is due to the lense effect and the high electrical efficiency.
3. THE FILAMENT IS VERY DURABLE.
They are manufactured by our special process, which produces exceptionally strong, uniform, and long-lived carbon.
4. CHEMICALLY PURE PLATINUM IS USED WHERE THE CURRENT IS CARRIED THROUGH THE GLASS.
5. THE LAMPS HAVE THE HIGHEST VACUUM OBTAINABLE.
This gives long life, and greatly reduces the conduction of heat from the filament to the jack.
6. EACH LAMP IS GIVEN A CAREFUL INDIVIDUAL TEST FOR VOLTAGE, CANDLEPOWER, MECHANICAL PERFECTION AND SIZE.

TELEPHONE SECURITIES BECOMING VERY POPULAR

That the Automatic Machine Is a Success Has Been Demonstrated Beyond a Doubt.

Caleb L. McKee & Co. says—"That the automatic telephone is a success has been demonstrated beyond a doubt, and the favor with which it has been received by the local public is indicated clearly by the upward movement in the securities of the Columbus Citizens' Telephone Co. At the beginning of the installation of the automatic switchboard the common stock was quoted at about 55 bid while at this time 75 is bid with nothing offered below about 85; the preferred has advanced from par to 107 bid with holders asking 111, and it seems likely to reach a much higher level [illegible] Columbus Railway [illegible]

Since Oct. 24th these Stocks have gone up,- the common to par, the preferred to 113½, and they are scarce at that. Our automatic System did it,- can do it for yours. Why do you wait?

OUR AUTOMATIC SYSTEM ADOPTED IN THE FOLLOWING CITIES:

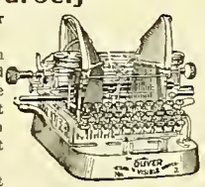
You Can Easily Operate This Typewriter Yourself



Don't worry your correspondent.

Don't write him anything by hand that takes him time to make out—that may leave him in doubt—that he can't easily read.

And don't fill out legal papers or card memos—or make out accounts or hotel menus in your own handwriting.

It looks bad, reflects on your standing, makes people think you can't afford a stenographer, and is sometimes ambiguous.

You can write out your letters—make out an abstract—fill in an insurance policy—enter your card memos—make out your accounts, or a hotel menu—or do any kind of writing you need, on any kind, size or thickness of paper, and space any way you want on

The OLIVER Typewriter

The Standard Visible Writer

You can write any of these things yourself if you do not happen to have a stenographer.

For you can easily learn, with a little practice, to write just as rapidly, and as perfectly, as an expert operator on the OLIVER. Because the OLIVER is the simplified typewriter. And you can see every word you write. About 80% more durable than any other typewriter, because it has about 80% less wearing points than most other typewriters.

80% easier to write with than these other complicated, intricate machines that require "humoring"—technical knowledge—long practice and special skill to operate.

Than machines which cannot be adjusted to any special space—with which it is impossible to write abstracts, insurance policies, or odd-sized documents, except you buy expensive special attachments requiring experts to operate.

You can adjust the OLIVER to any reasonable space—you can write on any reasonable size and thickness of paper, right out to the very edge, without the aid of any expensive attachment or special skill, and your work will be neat appearing, legible and clear.

For the OLIVER is the typewriter for the doctor, the lawyer, the insurance agent, the merchant, the hotel proprietor—or any man who does his own writing.

Write us now for our booklet on the simplified features of the OLIVER.

1906 CATALOGUE

The 1906 edition of our catalogue is printed and being distributed.

It is the most complete and valuable book we have published.

It is full of illustrations, and contains much valuable information of the latest inventions and devices known to the science, and uses of electricity.

The cipher code enables correspondence to be carried on completely by telegraph.

Every article has a code word, a number, the weight of the article, contents of standard packages, etc.

The number of the catalogue is 24.

If you do not receive a copy write for one.

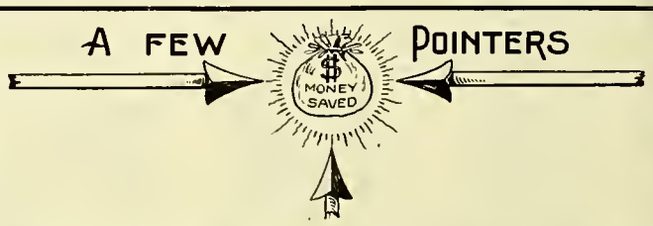
A FEW POINTERS



THE COST OF MAKING THINGS

depends upon how you make them quite as much as upon what they are made of.
The final step in cost reduction is automatic machinery.
Our business is designing and building automatic machinery for manufacturers—especially for making and assembling numerous small parts; for example, we can make a machine for automatically turning out 50,000 switches per day. Can't we serve you? Send us a sample of what you make and we'll talk figures. No risk to you.

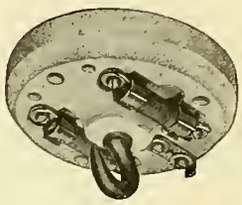
New Porcelain Ceiling Boards
FOR ARC LAMPS

Cat. No. 36850

Cat. No. 36850 is notable for its employment of a snap switch and a ratchet and chain, the lamp and board thus being self-contained and requiring no additional wiring to connect them with a switch. The use on this ceiling board of Edison Plug Cut-Outs, a better means of protection than the general cut-out, makes every lamp on a circuit independent of the others. The lamp hook, mounted by a spring, protects the lamp from jarring, making this board ideal for use on wharves, and in railway stations, factories and mills. The board is furnished for both concealed and cleat wiring.

Cat. No. 36844 may be equipped with N. E. C. S. enclosed fuses, 3 to 30 amperes, 250 volts. The board is compact, and is an excellent auxiliary device for installations using enclosed fuses, as only a few different styles of fuses need be kept in stock.



Cat. No. 36844

"FRES-KO" SOLDERING PASTE

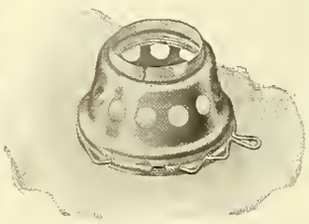
IT "CREEPS" INTO EVERY CREVICE

ABSOLUTELY NON-CORROSIVE

This flux paste under the heat of the iron will "run" into every crevice—around a bunch of wires in a socket for instance.

FRES-KO CHEMICAL CO. - Fort Wayne, Ind.

The New Spring Shade-Holder



which we are now furnishing with **Prismo Zenith Lamps**, is quite an improvement over the old style screw-holder. It holds the shade in place by means of a spring instead of screws, which permits of a more rapid adjustment of the shade and at the same time holds it more securely in place. It is adapted to all sockets, key and keyless, and adds greatly to the convenience of the **Prismo Lamp**.

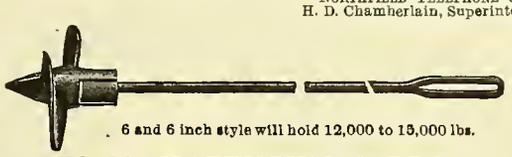
FROSTS, SLEETS, THAWS AND FREEZINGS ARE COMING!
Go Over Your Lines and Anchor the Weak Places With
STOMBAUGH GUY ANCHORS
We give herewith the experience of one company

OFFICE OF NORTHFIELD TELEPHONE COMPANY,
NORTHFIELD, VT., Dec. 5, 1904.

Gentlemen:—Yours of Nov. 30th received and contents noted. We have used your Anchors and have no doubt that they will prove satisfactory.

On the night of Nov. 20th this section was visited by the most severe storm we have had for years. On our lines running East and West there was from one to two inches of ice. Those poles guyed by the Stombaugh Guy Anchor are still standing, and we think that this is as good a test of their worth as we could have had.

Very truly yours,
NORTHFIELD TELEPHONE COMPANY,
H. D. Chamberlain, Superintendent.



6 and 6 inch style will hold 12,000 to 15,000 lbs.

OF INTEREST TO FAN USERS ONLY

The above is a radial section of a portion of the fan wheel of a

GREEN-MATTEAWAN FAN

It shows the **angle iron stiffening** rings which we apply to both the inner and outer edges of the side plates, where other makers use flat bars. This stiffening makes a more rigid and truer running wheel and enables us to reduce the clearance between the inner edge of the side plates and the housing. The result is that there is less leakage of air back past the wheel and more air at the discharge, for the same expenditure of power. As we announced some time ago we have worked out new designs for all our FANS, BLOWERS and EXHAUSTERS with the object of reducing the amount of power required for driving such apparatus.

Send for our Booklet "WE." on this subject, and, if you do not already have a copy, ask for our Book on Fuel Economy.

PREDOMINATES IN 27 States

"IT gives me great pleasure to state, that for 'Gitthereitiveoess' your periodical certainly is a winner. As you perhaps are aware, the company I travel for, advertises in all the electrical papers, and it has been a questioo in my mind whether they reached every central station, as their advertising manager would have our company believe. So, for one year I have kept account of the electrical papers and periodicals subscribed for and received by the manager or superintendent of electric light companies in twenty-seven states, (which has been my territory), and in summing it up, I find that your periodical predominates, three to one. I do not get in many telephone plants, but when I do, I invariably find the 'Western Electriciao' staring me in the face."

The letter from which the above is taken, is dated May 8, 1905, and is on file in this office.

WANTED, FOR SALE *and similar* **WANT COLUMN** *advertisements (50 words or less), $1.50 an insertion; additional words 3c each.* **POSITION WANTED** *advertisements (50 words or less), $1.00 an insertion; additional words 2c each.*

POSITION WANTED

As superintendent or manager of electric light and power plant. Over ten years experience in construction, operation and management of lighting and water works plants. Address Box 560, care of Western Electrician, 510 Marquette building, Chicago.

WANTED

Draftsmen—We have positions now open for draftsmen. Call or address Western Electric Co., Chicago, Ill.

WANTED.

A man experienced in testing and installing alternating current and direct current machinery. Write fully, giving age, qualifications and salary expected. Address Box 550, care of Western Electrician, 510 Marquette Building, Chicago.

WANTED.

An electrical engineer of education and experience for a large electric lighting and power company. Would be placed in charge of Meter and Installation Department. State age, experience, references, salary. Address Box 559, care of Western Electrician, 510 Marquette building, Chicago.

WANTED SALESMAN

First-class salesman to sell new patent Rock Island dry batteries on commission basis. Must have first-class references. Apply at once. Rock Island Battery Co., 456 to 462 East Sixth street, Cincinnati, Ohio.

FOR SALE

A 150 horsepower horizontal Hamilton Corliss reciprocating engine, practically new and in first-class condition; ready for delivery in thirty days. Address the Wire and Telephone Company of America, Rome, N. Y.

FOR SALE

A 150 horsepower plain straight line slide-valve non-condensing Watertown engine, and one 50 horsepower plain straight line slide-valve non-condensing engine made by William Jenks of Brookville, Pa., steam pressure of each 100 pounds, both in good condition, ready for delivery at once. Address the Wire and Telephone Company of Rome, New York.

FOR SALE—A Paying Plant

A Central Station Electric Light Plant in good Illinois town, 2,500 population, new machinery, 10-year street light contract. About $5,000 cash required, balance can be paid out of profits. This is a good opportunity. Address Box 552, care Western Electrician, 510 Marquette Bldg., Chicago.

FOR SALE

1,200 LIGHT ELECTRIC PLANT,

Consisting of 100 horse-power Payne Engines and 60 Kilowatt Edison Dynamo, in perfect condition. Low price for quick purchaser. Apply

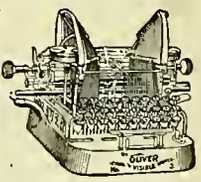
You Can Easily Operate This Typewriter Yourself



Don't worry your correspondent.

Don't write him anything by hand that takes him time to make out—that may leave him in doubt—that he can't easily read.

And don't fill out legal papers or card memos—or make out accounts or hotel menus in your own handwriting.

It looks bad, reflects on your standing, makes people think you can't afford a stenographer, and is sometimes ambiguous.

You can write out your letters—make out an abstract—fill in an insurance policy—enter your card memos—make out your accounts, or a hotel menu—or do any kind of writing you need, on any kind, size or thickness of paper, and space any way you want on

The OLIVER Typewriter

The Standard Visible Writer

You can write any of these things yourself if you do not happen to have a stenographer.

For you can easily learn, with a little practice, to write just as rapidly, and as perfectly, as an expert operator on the OLIVER. Because the OLIVER is the simplified typewriter. And you can see every word you write. About 80% more durable than any other typewriter, because it has about 80% less wearing points than most other typewriters.

60% easier to write with than these other complicated, intricate machines that require "humoring"—technical knowledge—long practice and special skill to operate.

Than machines which cannot be adjusted to any special space—with which it is impossible to write abstracts, insurance policies, or odd-sized documents, except you buy expensive special attachments requiring experts to operate.

You can adjust the OLIVER to any reasonable space—you can write on any reasonable size and thickness of paper, right out to the very edge, without the aid of any expensive attachment or special skill, and your work will be neat appearing, legible and clear.

For the OLIVER is the typewriter for the doctor, the lawyer, the insurance agent, the merchant, the hotel proprietor—or any man who does his own writing.

Write us now for our booklet on the simplified features of the OLIVER.

Standard Electrical Books

ENTIRELY NEW AND REVISED EDITION

8vo., Cloth, 482 pp. With Diagrams and Illustrations Price, $3.00

ELECTRIC LIGHTING

Vol. 1—The Generating Plant

By FRANCIS B. CROCKER, E. M., Ph. D.

Professor of Electrical Engineering in Columbia University. Past President of the American Institute of Electrical Engineers.

12mo., Cloth, 285 pp. Fully Illustrated Price, $2.50 Net

Electric Railways

Theoretically and Practically Treated.

Rolling Stock.

By SYDNEY W. ASHE, B. S.

Department of Electrical Engineering, Polytechnic Institute of Brooklyn. Late Instructor in Electric Traction for the Brooklyn Rapid Transit Co., Associate Member American Institute of Electrical Engineers.

AND

J. D. KEILEY

Assistant Electrical Engineer, N. Y. C. & H. R. R. R.

8vo., Cloth, 232 pp., Illustrated Price, $2.50 Net

Alternating Current Engineering Practically Treated

By E. B. RAYMOND

Testing Department General Electric Company

With 101 Diagrams and Figures

Third Edition, Corrected

Pocket Size, Flexible Leather, 1,000 Pages, with Innumerable Diagrams, Illustrations and Tables. Price, $5.00.

Electrical Engineer's Pocketbook

The most complete book of its kind ever published, treating of the latest and best practice in Electrical Engineering

By HORATIO A. FOSTER

Member Amer. Inst. E. E., Member Amer. Soc. M. E.

(WITH THE COLLABORATION OF EMINENT SPECIALISTS)

Fourth Edition Entirely Rewritten and Enlarged

8vo., Cloth, 675 pp. Price, $5.00 Net

The Electrical Transmission of Energy

A Manual for the Design of Electrical Circuits

By ARTHUR VAUGHAN ABBOTT, C. E.

Member American Institute of Electrical Engineers, Member American Institute of Mining Engineers, Member American Society of Civil Engineers, Member American Society of Mechanical Engineers, etc.

With 367 Figures, Ten Folding Diagrams and Sixteen Full-Page Engravings

2mo., Cloth, 159 pp., Illustrated Price, $1.50 Net

THE Electromagnet

By CHARLES R. UNDERHILL

Chief Electrical Engineer, Varley Duplex Magnet Co.

8vo., Cloth, 236 pp., Illustrated Price, $2.50 Net

Laboratory and Factory Tests In Electrical Engineering

By GEO. F. SEVER

Adjunct Professor of Electrical Engineering, Columbia University

AND

FITZHUGH TOWNSEND

Tutor in Electrical Engineering, Columbia University

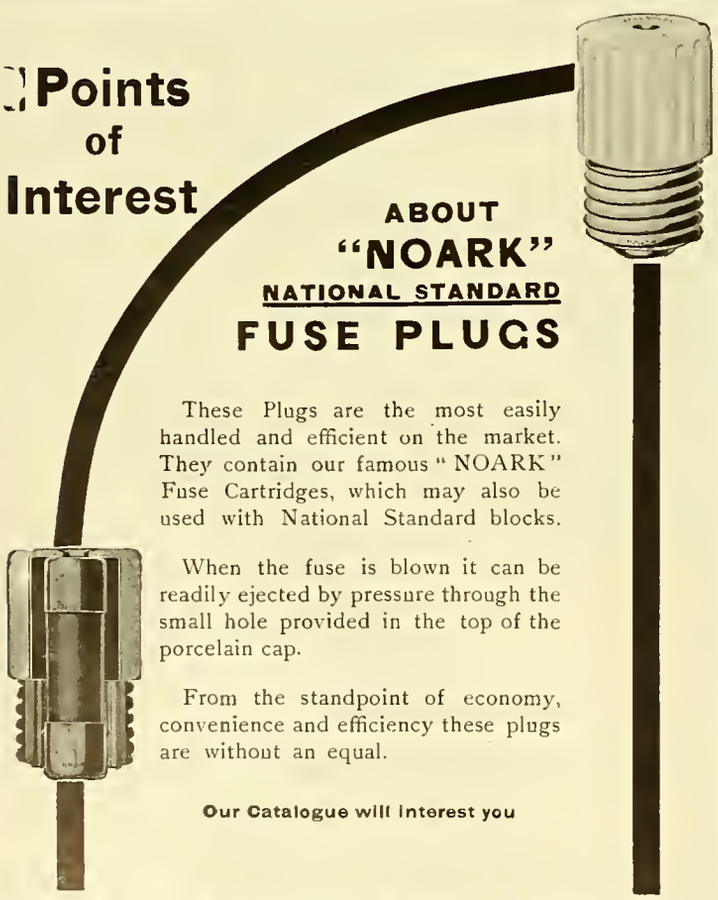
ABOUT
"NOARK"
NATIONAL STANDARD
FUSE PLUGS



These Plugs are the most easily handled and efficient on the market. They contain our famous "NOARK" Fuse Cartridges, which may also be used with National Standard blocks.

When the fuse is blown it can be readily ejected by pressure through the small hole provided in the top of the porcelain cap.

From the standpoint of economy, convenience and efficiency these plugs are without an equal.

HIGHEST AWARD — WEBER — GOLD MEDAL

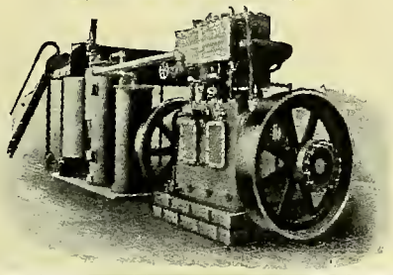
Complete Producer and Gas Engine.



BROOKS ELEVATOR CO.

WEBER GAS & GASOLINE ENGINE CO., Kansas City, Mo.: Minneapolis, Minn., Aug. 10th, 1905.

Gentlemen:—The Electric Light Company made a brake test last Saturday night of our Weber Engine and Gas Producer—brakes were set at 100 H. P.

The result of this test was, in a twelve hours' run, the consumption of 1,100 pounds of pea-anthracite coal or ½ of a pound per H. P. per hour.

The ash taken from the run amounted to about 270 pounds.

This should be very satisfactory from your standpoint and the Electric Light Company certainly cannot use it for advertising purposes, in fact do not believe they will ever mention having made this test. yours truly,

BROOKS ELEVATOR COMPANY.

ADVANTAGES

1. OUR TIPLESS LAMPS ARE UNEQUALED. The lamps are rounded off on the front end, thereby forming a small but effective convex lens which focuses all the light rays onto the most desirable position.
2. THE EFFECTIVE CANDLEPOWER IS THE MAXIMUM. This is due to the lense effect and the high electrical efficiency.
3. THE FILAMENT IS VERY DURABLE. They are manufactured by our special process, which produces exceptionally strong, uniform, and long-lived carbon.
4. CHEMICALLY PURE PLATINUM IS USED WHERE THE CURRENT IS CARRIED THROUGH THE GLASS.
5. THE LAMPS HAVE THE HIGHEST VACUUM OBTAINABLE. This gives long life, and greatly reduces the conduction of heat from the filament to the jack.
6. EACH LAMP IS GIVEN A CAREFUL INDIVIDUAL TEST FOR VOLTAGE, CANDLEPOWER, MECHANICAL PERFECTION AND SIZE.

THE TELEPHONE WOODWORKING COMPANY

TIFFIN, OHIO

THE COLUMBUS EVENING DISPATCH, TUESDAY OCTOBER 24, 1905.

TELEPHONE SECURITIES BECOMING VERY POPULAR

That the Automatic Machine Is a Success Has Been Demonstrated Beyond a Doubt.

Caleb L. McKee & Co. says—"That the automatic telephone is a success has been demonstrated beyond a doubt, and the favor with which it has been received by the local public is indicated clearly by the upward movement in the securities of the Columbus Citizens' Telephone Co. At the beginning of the installation of the automatic switchboard the common stock was quoted at about 55 bid while at this time 75 is bid with nothing offered below about 85; the preferred has advanced from par to 107 bid with holders asking 111, and it seems likely to reach a much higher level. The Columbus Railway ..."

Since Oct. 24th these stocks have gone up,— the common to par, the preferred to 113½, and they are scarce at that. Our automatic System did it,— can do it for yours. Why do you wait?

OUR AUTOMATIC SYSTEM ADOPTED IN THE FOLLOWING CITIES:

Water-Wheel Alternating Current Generators

BUILT IN ALL CAPACITIES

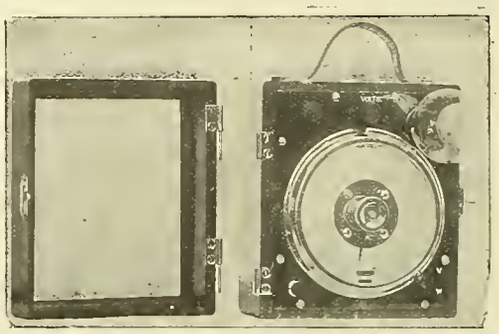
NATIONAL ELECTRIC COMPANY

MILWAUKEE, - - - - U. S. A.

Portable Lamp Testing Volt-Wattmeter

Capacity 150 Volts—150 Watts

Should form part of the equipment of every central station. Can be used on either alternating or direct current circuits without change of calibration. Reverse readings are not necessary on direct currents.



Two concentric scales are provided, one indicating watts, the other volts. By using the switch, cutting the series windings in or out, the wattage of the lamps or the voltage of the circuit can be read.

Attachment plug and extension cord can be used to take readings from electrolier sockets.

OUR

SINGLE PHASE A. C. MOTORS

ARE BUILT UNDER

United States Letters Patent { No. 543,836 / No. 562,365 / No. 458,162 / No. 530,176 / No. 530,177

Also a number of other patents of somewhat less importance.

These patents cover broadly, among other things, **the commutator type** of single phase constant speed motor, employing the following fundamental features:

1st. Starting as a commutator motor, and short-circuiting the individual armature coils on attaining full speed.

2d. Any single phase motor of the induction type having a coil-wound armature in which rotation is maintained by use of coil connections, which permit the flow of polyphase currents in the armature, while single phase currents are used in the field windings.

We desire to inform the public of the character of these patents, so that the purchasers or users of infringing motors may be fully advised with regard to the matter. We shall prosecute any infringement of these patents. There is no commutator motor **"like the Wagner"** or **"employing the same principles with improvements"** which does not infringe the above patents.
We **do not** employ the **Tesla** principles in our motor.

MAIN OFFICE AND FACTORY, ST. LOUIS, MO.

Offices in all the principal cities in the United States and Canada

This Picture

Shows one of our Small Power Motors operating a neostyle. You might look twice and not see it, it is so little and inconspicuous; but it does the work. We can make sixty copies of a letter in one minute.

The motor will drive a sewing machine equally well, or a dentist's drill, or any other contrivance of like requirements in power. Let us send Bulletin 1071--E.
